Comment utiliser ce document

- A. Les références figurant dans le document sont classées par chapitre du livre, et correspondent aux numéros apparaissant dans le texte du livre.
- B. Chaque numéro de référence renvoie à une ou plusieurs sources d'information.
- C. Quand une référence est basée sur un ou plusieurs passages spécifiques du texte, ils apparaissent également dans la référence.
- D. La case PMID indique le numéro de référence de l'article sur le site Internet PUBMED. Vous pouvez accéder à la fiche de l'article sur le site Internet en cliquant sur le numéro PMID indiqué dans la référence, ou en tapant l'adresse :

[https://www.ncbi.nlm.nih.gov/pubmed/\[PMID\]](https://www.ncbi.nlm.nih.gov/pubmed/[PMID])

Par exemple :

<https://www.ncbi.nlm.nih.gov/pubmed/17469680>

- E. Le texte intégral de nombreux articles publiés dans les revues médicales n'est pas librement accessible au public. Quand le texte intégral de l'article/document est librement consultable, son lien est généralement indiqué dans la référence. Dans le cas contraire, le numéro PMID renvoie à la page de l'article sur PUBMED.
- F. Certaines des références du livre sont des liens vers des articles de presse et diverses autres pages Internet. Or, les sites Internet sont connus pour supprimer des pages ou en changer l'adresse assez fréquemment ; il en résulte des liens « cassés ». Afin de contourner ce problème, chaque référence à une page ou à un article de presse est accompagnée d'un lien vers la page archivée, qui contient le contenu de la page originale (cherchez le mot « Archive »).
- G. Si vous parcourez ce document sur un ordinateur, vous pouvez ouvrir les liens en maintenant la touche Ctrl enfoncée tout en cliquant sur le lien.
- H. En général, un numéro de page dans une référence à un article renvoie au numéro de page de la version PDF dudit article. Pour naviguer rapidement vers le numéro de page souhaité, renseignez-le dans la case appropriée de votre application de lecture du PDF. Si deux numéros de page apparaissent (l'un entre parenthèses) comme ceci – P. 15 (19) –, le premier numéro désigne le numéro de la page originale (imprimée), et le second désigne le numéro à entrer dans la case de numéro de page de votre lecteur PDF.
- I. Si le même article apparaît dans plusieurs références, la première référence qui l'indique contiendra tous les détails relatifs à l'article, tandis que les références suivantes utiliseront une désignation abrégée composée du nom de l'auteur principal et de l'année de publication. Par exemple : Slade 2009.
- J. Pendant la lecture, si vous trouvez une erreur dans l'une des références, nous vous prions de bien vouloir nous contacter et de

nous la signaler.

Nous vous souhaitons une lecture agréable et bénéfique.

Chapitre 1 : Des tortues jusqu'en bas : Les essais cliniques des vaccins

1-20

	Site Internet : FDA website http://www.fda.gov/Drugs/ResourcesForYou/Consumers/ucm143531.htm	Archive : https://web.archive.org/web/20180825175113/https://www.fda.gov/Drugs/ResourcesForYou/Consumers/ucm143531.htm
2	Titre du document : ICH Harmonised Tripartite Guideline Choice Of Control Group And Related <i>Issues</i> In Clinical Trials E10 http://www.ich.org/fileadmin/Public_Web_Site/ICH_Products/Guidelines/Efficacy/E10/Step4/E10_Guideline.pdf	
	Auteur/Année : ICH Expert Working Group, 2008	Archive : https://drive.google.com/open?id=1IrAW9UYSFvIA8npBLKsAUZxft53cmhml
	P. 28 : It should be appreciated, however, that subjects receiving a new treatment are not receiving standard therapy (just as a placebo control group is not) and may be receiving an ineffective or harmful drug.	
3	Titre de l'article : U.S. advisory panel recommends Prevnar 13 vaccine for elderly	
	Date : 14 août 2014	
	Site Internet : Reuters http://www.reuters.com/article/us-pfizer-prevnar-idUSKBN0GD23I20140813	
	Archive : http://archive.is/RfO2H	
Par exemple : (Reuters) - An influential U.S. medical advisory panel on Wednesday recommended that people 65 and older be given Pfizer Inc's blockbuster Prevnar 13 vaccine to protect against pneumococcal bacteria that can cause pneumonia and other infections. [...] Prevnar 13 and an older version of the vaccine known as Prevnar 7 have combined annual sales of almost \$4.5 billion, making them Pfizer's second-biggest franchise. Prevnar 13 is approved for children 6 weeks through 17 years of age, and for adults 50 and older.		

4	Titre de l'article : Placebo use in vaccine trials: Recommendations of a WHO expert panel https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4157320/		PMID: 24768580
	Auteur principal/Année : Annette Rid, 2014		Archive : https://drive.google.com/open?id=1mX3RrTo-Jq6eEC-H_S1blqjDVfXYosUv
Revue : Vaccine			
P. 2 : Randomised, placebo-controlled trials are widely considered the gold standard for evaluating the safety and efficacy of a new vaccine. In these trials, participants are randomized to receive either the vaccine under investigation or a placebo (i.e. an inert substance such as a saline injection). Randomisation and the use of placebo interventions are designed to control for confounding effects, such that significant differences in disease incidence or adverse effects between the vaccine and control groups can likely be attributed to the vaccine.			

5	Titre de l'article : The clinical development process for a novel preventive vaccine: An overview https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4944327/		PMID: 26732191
	Auteur principal/Année : K Singh, 2016		Archive : http://archive.is/kPW8h
Revue : Journal of Postgraduate Medicine		Phase III Studies [...] RCTs are considered the “gold standard,” where participants are randomly allocated to receive either the investigational or the control vaccine (placebo, different vaccine, or nothing).	

6	Titre du document : ICH Harmonised Tripartite Guideline Choice Of Control Group And Related Issues In Clinical Trials E10 http://www.ich.org/fileadmin/Public_Web_Site/ICH_Products/Guidelines/Efficacy/E10/Step4/E10_Guideline.pdf		
	Auteur/Année : ICH Expert Working Group, 2000	Archive : https://drive.google.com/open?id=1IrAW9UYSFvIA8npBLKsAUZxft53cmhml	
P. 19 : When a new treatment is tested for a condition for which no effective treatment is known, there is usually no ethical problem with a study comparing the new treatment to placebo.			

	Titre du document : Expert consultation on the use of placebos in vaccine trials http://apps.who.int/iris/bitstream/handle/10665/94056/9789241506250_eng.pdf		
	Auteur/Année : WHO, 2013	Archive : https://drive.google.com/open?id=1yLHG4p00K2xUZmNsE4RyxrbUtkq382y	
P. 9 : A common model for the evaluation and deployment of a new vaccine, against a disease for which there is no existing vaccine, is that it is first tested in a placebo-controlled trial.			
P. 12 : As a general rule, research subjects in the control group of a trial of a diagnostic, therapeutic, or preventive intervention should receive an established effective intervention. In some circumstances it may be ethically acceptable to use an alternative comparator, such as placebo or “no treatment”.			

	A placebo may be used: • when there is no established effective intervention;	
	Titre du document : Guidance for Industry E 10 Choice of Control Group and Related Issues in Clinical Trials https://drive.google.com/open?id=17LyWGbK8dQRtcHfFjKMjs7xgxpU3CBp	
	Auteur/Année : FDA, 2001	
	P. 15 (19) : When a new treatment is tested for a condition for which no effective treatment is known, there is usually no ethical problem with a study comparing the new treatment to placebo.	

7	Titre du document : Expert consultation on the use of placebos in vaccine trials http://apps.who.int/iris/bitstream/handle/10665/94056/9789241506250_eng.pdf	
	Auteur/Année : WHO, 2013	Archive : https://drive.google.com/open?id=1yLHGu4pO0K2xUZmNsE4RyxrbUtkq382y
	P. 12-13 : ...there is uniformity on the use of placebos, i.e. that if a proven effective intervention exists, the trial intervention should generally be tested against it. Failure to do so deprives participants in the “control” arm of an intervention that is likely to benefit them.	

8	Titre du document : ICH Harmonised Tripartite Guideline Choice Of Control Group And Related Issues In Clinical Trials E10 http://www.ich.org/fileadmin/Public_Web_Site/ICH_Products/Guidelines/Efficacy/E10/Step4/E10_Guideline.pdf	
	Auteur/Année : ICH Expert Working Group, 2000	Archive : https://drive.google.com/open?id=1IrAW9UYSFvIA8npBLKsAUZxft53cmhtml
	P. 18 : A useful approach to the assessment of assay sensitivity in active control trials and in placebo-controlled trials is the three-arm trial, including both placebo and a known active treatment, a trial design with several advantages.	
	Titre de l'article : Alternatives to Placebo-Controlled Trials https://www.cambridge.org/core/services/aop-cambridge-core/content/view/28A722D8EF2C2FCABB3A1AC2477DFBB8/S0317167100005540a.pdf/alternatives_to_placebocontrolled_trials.pdf	PMID: 17469680
		Archive : https://drive.google.com/open?id=1uSPdSiRKHzex8QwuHiOmLjgxD3_Fi7vE
	Auteur principal/Année : David L. Streiner, 2007	Revue : The Canadian Journal Of Neurological Sciences
	P. 5 : My recommendation would be that, when an existing therapy exists, and if certain conditions apply: * Studies should consist of three arms: the new drug, the existing drug, and a placebo group..	

9	Titre du document : ICH Harmonised Tripartite Guideline Choice Of Control Group And Related Issues In Clinical Trials E10 http://www.ich.org/fileadmin/Public_Web_Site/ICH_Products/Guidelines/Efficacy/E10/Step4/E10_Guideline.pdf	

	Auteur/Année : ICH Expert Working Group, 2000	Archive : https://drive.google.com/open?id=1IrAW9UYSFvIA8npBLKsAUZxft53cmhml
	<p>Section 2.5.2 :</p> <p>It is always difficult, and in many cases impossible, to establish comparability of the treatment and control groups and thus to fulfill the major purpose of a control group (see section 1.2). The groups can be dissimilar with respect to a wide range of factors, other than use of the study treatment, that could affect outcome, including demographic characteristics, diagnostic criteria, stage or severity of disease, concomitant treatments, and observational conditions (such as methods of assessing outcome, investigator expectations). Such dissimilarities can include important but unrecognized prognostic factors that have not been measured. Blinding and randomization are not available to minimize bias when external controls are used.</p> <p>[...]</p> <p>Control groups in a randomized study need to meet certain criteria to be entered into the study, criteria that are generally more stringent and identify a less sick population than is typical of external control groups. An external control group is often identified retrospectively, leading to potential bias in its selection.</p>	
10	Titre du document : HAVRIX, Package Insert https://drive.google.com/open?id=1XGppC-tPGSWvEZNGK8kRY15nGz76lxSA	
	<p>Section 5.6.1 :</p> <p>Because clinical trials are conducted under widely varying conditions, adverse reaction rates observed in the clinical trials of a vaccine cannot be directly compared to rates in the clinical trials of another vaccine, and may not reflect the rates observed in practice.</p>	
11	Titre du document : Guidelines for the Ethical Conduct of Studies to Evaluate Drugs in Pediatric Populations http://pediatrics.aappublications.org/content/pediatrics/60/1/91.full.pdf	
	Auteur/Année : AAP, 1977	Archive : https://drive.google.com/open?id=1sjvo_5OLgRv8ZCkh7lic-1Kih1gV1zEF
	<p>P. 1-2 :</p> <p>The publication of these general guidelines and their implications for future drug development led the FDA to request that the Academy's Committee on Drugs advise it about standards of ethical research which could be recommended to assure that children, and society in general, are served appropriately by studies carried out in pediatric populations without undue hazard or discomfort.</p> <p>[...]</p> <p>The Committee believes that it is unethical to adhere to a system which forces physicians to use therapeutic agents in an uncontrolled experimental situation virtually every time they prescribe for children. Furthermore, it is not only ethical but also imperative that new drugs to be used in children be studied in children under controlled circumstances so the benefits of therapeutic advances will become available to all who may need them.</p>	
12	Titre du document : Ethical Considerations in Conducting Pediatric Research Chapitre tiré du livre suivant : Pediatric Clinical Pharmacology https://www.springer.com/gp/book/9783642201943	
	Auteur principal/Année : Michelle Roth-Cline, 2011	

	<p>P. 221 :</p> <p>A fundamental pillar of pediatric research is the ethical principle of “scientific necessity.” This principle holds that children should not be enrolled in a clinical investigation unless necessary to achieve an important scientific and/or public health objective concerning the health and welfare of children. An “important scientific question” may be one that generates information that is necessary and timely for establishing the appropriate pediatric use of investigational therapeutics. A corollary is that children should not be enrolled in studies that are duplicative or unlikely to yield important knowledge applicable to children about the product or condition under investigation.</p>
--	---

13	<p>Titre du document :</p> <p>Ethical Considerations in Conducting Pediatric Research</p> <p>Chapitre tiré du livre suivant :</p> <p>Pediatric Clinical Pharmacology</p> <p>https://www.springer.com/gp/book/9783642201943</p>
	<p>Auteur principal/Année :</p> <p>Michelle Roth-Cline, 2011</p>
	<p>P. 222, 224 :</p> <p>First, the risks to which children would be exposed must be low if there is no prospect of direct therapeutic benefit (PDB) to the enrolled children. Second, children should not be placed at a disadvantage by being enrolled in a clinical trial, either through exposure to excessive risks or by failing to get necessary health care. Consequently, the data necessary to initiate a pediatric investigation must demonstrate either an acceptably low risk of the experimental intervention or a sufficient PDB to justify the risks of the intervention.</p> <p>[...]</p> <p>Investigations involving children that pose more than low risk cannot be justified by the importance of anticipated knowledge. In pediatric studies, the allowable risk exposure for an intervention or procedure not offering a PDB must be restricted to low risk.</p>
	<p>Titre du document :</p> <p>MMR II Clinical Trials – DFA FOIA</p> <p>https://drive.google.com/open?id=1GKahQSNG8LvCAnEG7SGNyYPUEiSJwfd8</p>
	<p>Exemple tiré d'un formulaire rempli par les investigateurs d'un essai de vaccin à la fin des années 1970.</p> <p>P. 103 :</p> <p>B. Describe the benefit to the subject or advancement of knowledge that will balance the risk involved.</p> <p>C. Indicate measures proposed to minimize risk [...]</p>

14	<p>Titre du document :</p> <p>Ethical Considerations in Conducting Pediatric Research</p> <p>Chapitre tiré du livre suivant :</p> <p>Pediatric Clinical Pharmacology</p> <p>https://www.springer.com/gp/book/9783642201943</p>
	<p>Auteur principal/Année :</p> <p>Michelle Roth-Cline, 2011</p>

	<p>P. 226-228 :</p> <p>FDA regulations also include a classification of “minor increase over minimal risk” (21 CFR 50.53, 2011). An intervention or procedure approved under this category must also involve “experiences to subjects that are reasonably commensurate with those inherent in their actual or expected... situations” and be “likely to yield generalizable knowledge about the subjects’ disorder or condition that is of vital importance for the understanding or amelioration of the subjects’ disorder or condition.”</p> <p>[...]</p> <p>In assessing whether an intervention or procedure presents no more than a minor increase over minimal risk, there must be sufficient data that any research-related pain, discomfort or stress will not be severe and that any potential harms will be transient and reversible (Fisher et al. 2007). Even if the average risk associated with an intervention or procedure is thought to be low, if the risk estimate is unknown, reflects a large degree of variability, or has not been adequately characterized, then the risks of an intervention or procedure cannot be considered only a minor increase over minimal risk.</p>

	Paragraphe 18 :		

	<p>18. Physicians may not be involved in a research study involving human subjects unless they are confident that the risks have been adequately assessed and can be satisfactorily managed. When the risks are found to outweigh the potential benefits or when there is conclusive proof of definitive outcomes, physicians must assess whether to continue, modify or immediately stop the study</p> <p>Paragraphe 28 :</p> <p>28. For a potential research subject who is incapable of giving informed consent, the physician must seek informed consent from the legally authorised representative. These individuals must not be included in a research study that has no likelihood of benefit for them unless it is intended to promote the health of the group represented by the potential subject, the research cannot instead be performed with persons capable of providing informed consent, and the research entails only minimal risk and minimal burden.</p>

7	<p>Titre du document : Adverse Effects of Vaccines: Evidence and Causality</p>

	http://nationalacademies.org/hmd/reports/2011/adverse-effects-of-vaccines-evidence-and-causality.aspx
	Auteur/Année : IOM, 2011
	P. 30 (59) : In 2009 HRSA requested that the IOM convene a committee of experts to review the epidemiological, clinical, and biological evidence regarding adverse health events associated with specific vaccines covered by the VICP. The committee was charged with developing a consensus report with conclusions on the evidence bearing on causality and the evidence regarding the biological mechanisms that underlie specific theories for how a specific vaccine is related to a specific adverse event.
8	Désignation abrégée : IOM 2011
	P. IX (10) : Following in this tradition, the task of this committee was to assess dispassionately the scientific evidence about whether eight different vaccines cause adverse events (AE), a total of 158 vaccine-AE pairs, the largest study undertaken to date, and the first comprehensive review since 1994.
9	Désignation abrégée : IOM 2011
	P. 18 (47) : The committee concluded the evidence convincingly supports 14 specific vaccine–adverse event relationships. In all but one of these relationships, the conclusion was based on strong mechanistic evidence with the epidemiologic evidence rated as either limited confidence or insufficient. [...] The committee concluded the evidence favors acceptance of four specific vaccine–adverse event relationships.
10	Désignation abrégée : IOM 2011
	P. 23 (52) : The committee concluded the evidence favors rejection of five vaccine–adverse event relationships. [...] The vast majority of causality conclusions in the report are that the evidence was inadequate to accept or reject a causal relationship.
11	Désignation abrégée : IOM 2011
	P. 19-21 (48-50)
12	Désignation abrégée : IOM 2011
	P. 630-632 (659-661)

	Site Internet : CBS NEWS https://www.cbsnews.com/news/leading-dr-vaccines-autism-worth-study/	
	Archive : http://archive.is/q82UH	
	<p>Bernadine Healy, ancienne haut fonctionnaire des organismes de santé publique américains, a déclaré à CBS News en 2008 :</p> <p>Healy goes on to say public health officials have intentionally avoided researching whether subsets of children are "susceptible" to vaccine side effects - afraid the answer will scare the public.</p> <p>"You're saying that public health officials have turned their back on a viable area of research largely because they're afraid of what might be found?" Attkisson asked.</p> <p>Healy said: "There is a completely expressed concern that they don't want to pursue a hypothesis because that hypothesis could be damaging to the public health community at large by scaring people.</p>	
15	Désignation abrégée : IOM 2011	
	P. 28 (57) : The overwhelming safety and effectiveness of vaccines in current use in preventing serious disease has allowed them to gain their preeminent role in the routine protection of health.	

16	Désignation abrégée : IOM 2011
	P. 49 (78) : It is important to note that mechanistic evidence can only support causation. Epidemiologic evidence, by contrast, can support (“favors acceptance of”) a causal association or can support the absence of (“favors rejection of”) a causal association in the general population and in various subgroups that can be identified and investigated, unless or until supportive mechanistic evidence is discovered or a rare, susceptible subgroup can be identified and investigated.
17	Désignation abrégée : IOM 2011
	P. X (11) : Many of the case reports the committee reviewed simply cited a temporal relation between vaccine administration and an adverse event.
18	Désignation abrégée : IOM 2011
	P. 440-442 (469-471)
19	Désignation abrégée : IOM 2011
	P. 154-156 (183-185)
20	Nom de la page : Acute Disseminated Encephalomyelitis (ADEM)
	Site Internet : WEBMD https://www.webmd.com/brain/acute-disseminated-encephalomyelitis-adem#1
	Archive : http://archive.is/8u53v
	ADEM seems to be an autoimmune disease. That means your immune system attacks your body's own cells and tissues as if they were outside bacteria or viruses. Experts don't know exactly what triggers it, but it could be an overreaction to an infection. Most of the time, the attack happens when a child is getting over some common illness, like a cold or stomach bug.
	ADEM sometimes follows an immunization, particularly certain rabies shots and the vaccine for measles, mumps, and rubella. No direct connection has been made though. Other times, nothing out of the ordinary happens before symptoms appear.

21-34

21	Nom de la page : Optic neuritis
	Site Internet : Mayo Clinic https://www.mayoclinic.org/diseases-conditions/optic-neuritis/symptoms-causes/syc-20354953
	Archive : http://archive.is/A9RBI
	The exact cause of optic neuritis is unknown.

22	Nom de la page : Guillain-Barre syndrome
	Site Internet : Mayo Clinic https://www.mayoclinic.org/diseases-conditions/guillain-barre-syndrome/symptoms-causes/syc-20362793
	Archive : http://archive.is/2IgLm
	The exact cause of Guillain-Barre syndrome isn't known.
23	Nom de la page : What is Transverse Myelitis?
	Site Internet : Johns Hopkins Medicine http://www.hopkinsmedicine.org/neurology_neurosurgery/centers_clinics/transverse_myelitis/about-tm/what-is-transverse-myelitis.html
	Archive : http://archive.is/CiqdA
	The cause of 60% of TM cases may remain unknown despite the presence of inflammatory mechanisms. However, the remaining 40% is associated with autoimmune disorders such as multiple sclerosis, neuromyelitis optica, systemic lupus erythematosus, Sjogren's syndrome and sarcoidosis among others. The term <i>idiopathic</i> — meaning the cause is unknown- has been used in the past in situations in which the cause cannot be determined. However, the lack of demonstration of a causative disorder, mechanism or agent may be the result of failure of an early diagnosis or the result of causative factors that disappears quickly such as in cases of viral infections or post-infectious disorders.
24	Nom de la page : Lupus
	Site Internet : Mayo Clinic http://www.mayoclinic.org/diseases-conditions/lupus/basics/causes/con-20019676
	Archive : http://archive.is/SY0oG
	Lupus occurs when your immune system attacks healthy tissue in your body (autoimmune disease). It's likely that lupus results from a combination of your genetics and your environment. It appears that people with an inherited predisposition for lupus may develop the disease when they come into contact with something in the environment that can trigger lupus. The cause of lupus in most cases, however, is unknown.
25	Nom de la page : Vasculitis
	Site Internet : Mayo Clinic http://www.mayoclinic.org/diseases-conditions/vasculitis/basics/causes/con-20026049
	Archive : http://archive.fo/DMh6g
	The exact cause of vasculitis isn't fully understood. Some types are related to a person's genetic makeup. Others result from the immune system attacking blood vessel cells by mistake.

26	Nom de la page : Type 1 diabetes in children	
	Site Internet : Mayo Clinic https://www.mayoclinic.org/diseases-conditions/type-1-diabetes-in-children/symptoms-causes/syc-20355306	
	Archive : http://archive.fo/TqdgF	
	The exact cause of type 1 diabetes is unknown. But in most people with type 1 diabetes, the body's immune system — which normally fights harmful bacteria and viruses — mistakenly destroys insulin-producing (islet) cells in the pancreas. Genetics and environmental factors appear to play a role in this process.	
27	Désignation abrégée : IOM 2011

	<p>In spite of all the intensive tests he has undergone, both hospitals have not been able to find out why the sudden and dramatic liver collapse. It is a rare condition. Once or twice a year, we have such a condition of a child with liver failure even though they are completely healthy.</p> <p>"In this condition, they undergo tests to detect infectious, autoimmune or metabolic diseases, and often the cause is not found," explains Dr. Michael Gurevich, senior physician at the Schneider hospital transplant system, who was one of the surgeons.</p> <p>One of the causes of the collapse, which was tested and ruled out is the flu vaccine he received the day before. "The medical literature does not describe a case where the flu vaccine caused liver inflammation or liver failure," Dr. Gurevich emphasizes. The mother also denies the possibility.</p> <p>"The source of the problem is unknown and will probably never be known. All the possibilities were checked, all the tests were done, and do not know. We were told that it is a very rare condition for a child fully healthy to undergo a liver collapse. The best infectious disease specialists have said that if the child turned yellow within a day, then he was probably already sick. "</p>	

34	Désignation abrégée : IOM 2011
	P. 28 (57) : The overwhelming safety and effectiveness of vaccines in current use in preventing serious disease has allowed them to gain their preeminent role in the routine protection of health.

	Site Internet : VAERS website https://vaers.hhs.gov/faq.html		
6	Désignation abrégée : Varricchio 2004		PMID: 15071280
	P. 2 : VAERS is a passive surveillance, or spontaneous reporting, system. Passive surveillance systems rely on health care professionals (or vaccinees) to voluntarily submit reports of illness after vaccination.		

7	Nom de la page : Guide to Interpreting VAERS Data	Archive : https://web.archive.org/web/20180209232915/https://vaers.hhs.gov/data/dataguide.html
	Site Internet : VAERS website https://vaers.hhs.gov/data/dataguide.html	
	"Underreporting" is one of the main limitations of passive surveillance systems, including VAERS	
8	Nom de la page : Information for Healthcare Providers	Archive : https://web.archive.org/web/20171125064142/https://vaers.hhs.gov/resources/infoproviders.html
	Site Internet : VAERS website https://vaers.hhs.gov/resources/infoproviders.html	
	Désignation abrégée : Varricchio 2004	PMID: 15071280
	P. 4 : Only selected adverse events, as specified in the Reportable Events Table, are required by law to be reported by vaccine providers. The adverse events listed in the table have been shown to be potentially related to vaccination and therefore may be compensable through the Vaccine Injury Compensation Program (www.hrsa.gov/osp/vicp/) in the absence of an alternate cause.	
9	Titre du document : Electronic Support for Public Health–Vaccine Adverse Event Reporting System (ESP:VAERS) https://healthit.ahrq.gov/sites/default/files/docs/publication/r18hs017045-lazarus-final-report-2011.pdf	
	Archive : https://drive.google.com/open?id=1UiH_BuqrRJoaj4o3otgqZiWiYgeBIH9H	
	Auteur principal/Année : Ross Lazarus, 2011	
	P. 6 : New surveillance methods for drug and vaccine adverse effects are needed. Barriers to reporting include a lack of clinician awareness, uncertainty about when and what to report, as well as the burdens of reporting: reporting is not part of clinicians' usual workflow, takes time, and is duplicative.	
10	Titre de l'article : Post-marketing surveillance for adverse events after vaccination: the national Vaccine Adverse Event Reporting System (VAERS) http://www.fda.gov/downloads/Safety/MedWatch/UCM168497.pdf	
	Archive : https://drive.google.com/open?id=1e1suDwD92AF9TfTW6yk89-PyMkgXqmFD	
	Auteur principal/Année : NIH/FDA, 1998	
	P. 1-2 : Thus, when the product leaves the controlled study environment of clinical trials and is put into general clinical use by practitioners, the ability to determine the actual incidence of adverse events is questionable.	
	Désignation abrégée : Varricchio 2004	PMID: 15071280

	<p>P. 4 :</p> <p>Therefore because VAERS functions primarily as a voluntary reporting system, reporting occurs for only a proportion of suspected adverse events, and this proportion varies depending on the vaccine and the type of event.</p>

	P. 3 : Of the 8471 manufacturer reports for qHPV AEFIs, 7561 (89%) had insufficient identifying information to permit clinical follow-up or review.		
	Titre de l'article : Completeness of serious adverse drug event reports received by the US Food and Drug Administration in 2014		PMID: 26861066
	Auteur principal/Année : Thomas J. Moore, 2016	Revue : Pharmacoepidemiology and drug safety	

	Il en va de même en matière de déclaration des effets indésirables des médicaments pharmaceutiques. P. 1 : Overall, 21,595 (86.2%) of serious reports submitted directly to the FDA provided data for all four completeness variables, compared with 271,022 (40.4%) of manufacturer expedited reports and 24,988 (51.3%) of periodic reports. Among manufacturer serious reports, 37.9% lacked age and 46.9% had no event date. Performance by 25 manufacturers submitting 5000 or more reports varied from 24.4% complete on all variables to 67% complete. Patient death cases had the lowest completeness scores in all categories.

	P. 7 : ...the extent of underreporting to VAERS is not known.	

21-40

21	Désignation abrégée : Slade 2009	Archive : https://drive.google.com/open?id=1MQIcFiM-5POt66gfIdLaASCdgY9EZcDF
	P. 7 : AEFI reporting rates also need cautious interpretation, because vaccine distribution data do not allow calculation of age-specific reporting rates and do not provide the numbers of doses actually administered	

22	Désignation abrégée : Slade 2009	Archive : https://drive.google.com/open?id=1MQIcFiM-5POt66gfIdLaASCdgY9EZcDF
	P. 3 : From June 1, 2006, through December 31, 2008, VAERS received 12,424 reports of AEFIs following receipt of qHPV (Table 1), an overall reporting rate of 53.9 reports per 100,000 vaccine doses distributed.	

23	Désignation abrégée : Slade 2009	Archive : https://drive.google.com/open?id=1MQIcFiM-5POt66gfIdLaASCdgY9EZcDF
	P. 7 : The postlicensure safety profile presented here is broadly consistent with safety data from prelicensure trials.	

24	Nom du document : GARDASIL Package Insert https://drive.google.com/open?id=1u3cOmn6ehXdR21bNuUQ7He3q6e2jFFxx	
	P. 8, tableau 9	

25	Désignation abrégée : Slade 2009	Archive : https://drive.google.com/open?id=1MQIcFiM-5POt66gfIdLaASCdgY9EZcDF
	<p>P. 2 : We also used proportional reporting ratio (PRR), another method to detect potential associations between reported AEFIs and a drug or vaccine, to compare the proportion of selected AEFI reports for qHPV with the proportion of selected AEFI reports for all other vaccines by age group and sex.</p> <p>P. 6 : The PRR for deaths in 6- to 17-year olds was 1.4 ($_2=0.42$, $P=.52$). The PRR for deaths in 8- to 29-year-olds was 1.2 ($_2=0.01$, $P=.92$). Neither of these met the screening criteria for signal detection.</p>	
26	Désignation abrégée : Varricchio 2004	PMID: 15071280
	<p>P. 4-5 : Attempts to use the VAERS data to calculate internal “relative risks” of specific adverse events for a vaccine, using reports for another vaccine as a “control” group, raise a fifth methodologic issue. Relative risks represent a ratio of incidence rates, and incidence rates cannot be calculated from VAERS data as previously discussed. Relative reporting rates might be calculated, but elevated relative reporting rates calculated from VAERS data may be spurious, regardless of the results of statistical significance testing.</p> <p>Et : Relative reporting rates from VAERS should not be confused with data-mining methods that attempt to identify adverse events reported more commonly after one vaccine (or group of vaccines) than after others. Three data-mining methods being applied increasingly to medical product safety data are the proportional reporting rate ratio (PRR), empiric Bayesian and neural network approaches.</p> <p>[...]</p> <p>PRR and other data-mining statistics can be biased by differences in usage and reporting of adverse events; thus elevated data-mining statistics do not necessarily reflect a causal relationship between a vaccine and an adverse event. PRR and other data-mining statistics should not be interpreted or presented as relative risks of specific vaccine adverse events. Such statistics should be used only as a hypothesis generation tool and are evaluated in the same manner as other hypotheses generated by VAERS.</p>	
27	Désignation abrégée : Slade 2009	Archive : https://drive.google.com/open?id=1MQIcFiM-5POt66gfIdLaASCdgY9EZcDF
	<p>P. 1 : Most of the AEFI rates were not greater than the background rates compared with other vaccines, but there was disproportional reporting of syncope and venous thromboembolic events. The significance of these findings must be tempered with the limitations (possible underreporting) of a passive reporting system.</p>	
28	Désignation abrégée : Slade 2009	Archive : https://drive.google.com/open?id=1MQIcFiM-5POt66gfIdLaASCdgY9EZcDF
	<p>P. 7 : The VAERS reporting rate for qHPV is triple the rate for all other vaccines combined[...]</p>	

29	Désignation abrégée : Slade 2009	Archive : https://drive.google.com/open?id=1MQIcFiM-5POt66gfIdLaASCdgY9EZcDF
	<p>P. 7 : The VAERS reporting rate for qHPV is triple the rate for all other vaccines combined, perhaps reflecting greater public attention to HPV than the usual increased reporting following licensure of a new product (“Weber effect”). [...] Reports of VTEs after qHPV immunization should be interpreted with caution due to the multiple limitations of a passive reporting system and the potential effect of widespread media coverage stimulating reporting.</p>	
30	Désignation abrégée : Slade 2009	Archive : https://drive.google.com/open?id=1MQIcFiM-5POt66gfIdLaASCdgY9EZcDF
	<p>P. 7 : However, VAERS data need to be interpreted with caution, because not all reported events are systematically validated, and many may have only coincidentally followed vaccination. In addition, data limitations include underreporting, inconsistency in the quality and completeness of reported data, stimulated reporting due to extensive news coverage, and reporting biases. [...] A further limitation of VAERS reports after qHPV is that a large proportion (68%) come from the manufacturer and most of these reports (89%) do not include sufficient identifying information to allow medical review of the individual cases.</p>

	<p>P. 3 : Aim 3. Comprehensively evaluate ESP:VAERS performance in a randomized trial, and in comparison to existing VAERS and Vaccine Safety Datalink data.</p> <p>P. 5 : The draft was then widely circulated as an initial / working draft for comment by relevant staff in the CDC and among our clinical colleagues at Atrius. In addition to review by the internal CDC Brighton Collaboration liaison, this protocol has also received review & comment via the CDC's Clinical Immunization Safety Assessment (CISA) Network.</p>	
43	Désignation abrégée : Lazarus 2011	Archive : https://drive.google.com/open?id=1Uih_BuqrRJoaj4o3otgqZiWiYgeBIH9H
	P. 6 : Unfortunately, there was never an opportunity to perform system performance assessments because the necessary CDC contacts were no longer available and the CDC consultants responsible for receiving data were no longer responsive to our multiple requests to proceed with testing and evaluation.	
44	Désignation abrégée : Lazarus 2011	Archive : https://drive.google.com/open?id=1Uih_BuqrRJoaj4o3otgqZiWiYgeBIH9H
	P. 5 : The goal of Aim 3 was to <i>comprehensively evaluate ESP:VAERS performance in a randomized trial, and in comparison to existing VAERS and Vaccine Safety Datalink data.</i> We had initially planned to evaluate the system by comparing adverse event findings to those in the Vaccine Safety Datalink project—a collaborative effort between CDC's Immunization Safety Office and eight large managed care organizations. Through a randomized trial, we would also test the hypothesis that the combination of secure, computer-assisted, clinician-approved, adverse event detection, and automated electronic reporting will substantially increase the number, completeness, validity, and timeliness of physician-approved case reports to VAERS compared to the existing spontaneous reporting system; however, due to restructuring at CDC and consequent delays in terms of decision making, it became impossible to move forward with discussions regarding the evaluation of ESP:VAERS performance in a randomized trial, and compare ESP:VAERS performance to existing VAERS and Vaccine Safety Datalink data. Therefore, the components under this particular Aim were not achieved.	
45	Désignation abrégée : Lazarus 2011	Archive : https://drive.google.com/open?id=1Uih_BuqrRJoaj4o3otgqZiWiYgeBIH9H
	P. 6 : Preliminary data were collected from June 2006 through October 2009 on 715,000 patients, and 1.4 million doses (of 45 different vaccines) were given to 376,452 individuals. Of these doses, 35,570 possible reactions (2.6 percent of vaccinations) were identified. This is an average of 890 possible events, an average of 1.3 events per clinician, per month. These data were presented at the 2009 AMIA conference.

	Auteur/Année : IOM 2005		
	<p>P. 96 : One of the key goals of the Vaccine Safety Datalink (VSD) data sharing program should be maintenance of public trust in the use of the VSD to draw scientific conclusions about vaccine safety. Because of the contentious nature of some of the issues surrounding the VSD and the strained relationship between the Centers for Disease Control and Prevention (CDC) and some people who have been critical of CDC's vaccine safety activities, the committee recognizes that there may be public concerns about the role of CDC in reviewing proposals to use VSD data and in setting the VSD research agenda. A perception of bias in the VSD proposal-review process and in the priorities established for the VSD research plan could jeopardize public confidence in VSD activities. There are legitimate reasons for public concern about the independence and fairness of the review of VSD data sharing proposals and of determinations about when and how to release preliminary findings of VSD analyses. The lack of transparency of some of those processes affects the trust relationship between the National Immunization Program (NIP) and some members of the general public.</p> <p>P. 97-98 : The limitations of the VSD data sharing program and the limited ability of independent external researchers to conduct high-quality corroboration studies or studies of new hypotheses create a special need to involve the public in the priority-setting process for the VSD research plan. Only NIP-affiliated or MCO-affiliated researchers have access to VSD data for events before and after January 1, 2001, for corroboration studies and studies of new hypotheses, so independent external researchers may not be able to conduct studies that members of the public consider to have high priority. [...] In view of the limited ability of independent researchers to conduct high-quality VSD studies of new hypotheses and the limited ability of the public to provide input on which VSD studies should be</p>		

	pursued with federal tax dollars, there needs to be greater opportunity for input into the setting of priorities in the VSD research plan and greater transparency of the priority-setting process.

P. 3			

3	Désignation abrégée : White 1990	Archive : https://drive.google.com/open?id=1BWQHwQt9syfRTHCefTfRF1f6QblhOLkb
	P. 4 : The Department of Agriculture has made estimates of the average annual consumption of tobacco products in the United States among persons aged 15 years and over, from 1900 to 1960. During this period the number of cigarettes marketed, per person, increased by a factor of about 80, from 50 to 3,900; the sale of pipe tobacco decreased from 1.6 to .6 pounds, and the number of cigars fell from 110 to 60, per person.	

4	Désignation abrégée : White 1990	Archive : https://drive.google.com/open?id=1BWQHwQt9syfRTHCefTfRF1f6QblhOLkb
	P. 2 : Speculation about these factors continued, but there was also much criticism of the view that the reported increase in lung cancer was credible. These criticisms led to debate throughout the forties and early fifties. An editorial in the British Medical Journal in 1942 stated "It is doubtful whether the higher incidence of cancer of the lung observed in recent years is real or only apparent". Factors which were listed as likely to be responsible for an artificial increase were better diagnosis of the disease and increased longevity of the population.	

5	Désignation abrégée : White 1990	Archive : https://drive.google.com/open?id=1BWQHwQt9syfRTHCefTfRF1f6QblhOLkb
	P. 4-5 : Doll has noted that it had been known long before 1950 that smoking could cause disease, but it was "not until 1950 that a large amount of data was obtained in a sufficiently representative and responsible way to lead more than a handful of people to believe that smoking might actually be responsible for causing a material amount of disease" [28]. The two case-control studies in 1950 that were not only large but also well conducted were by Wynder and Graham in the United States [29] and by Doll and Hill in England.

10	Désignation abrégée : White 1990	Archive : https://drive.google.com/open?id=1BWQHwQt9syfRTHCefTfRF1f6QblhOLkb
	P. 10 : In 1958, by which time there was substantial epidemiologic evidence on smoking as a risk factor for lung cancer, the British Medical Journal commented as follows on this evidence: "The fact that experimental work has not provided complete and irrefutable proof has tended to hinder its wholehearted acceptance". A representative of the tobacco industry described this objection more forcefully, by stating that the search for chemical carcinogens in tobacco "has now been continued so long in the hands of so many able investigators and with such meager results that many scientists no longer believe it likely that tobacco smoke exerts any significant effect as a direct or specific carcinogen for human tissues". In 1962, Lancet summarized the results of the chemical analysis of tobacco products by noting "no carcinogen has been found in adequate concentration in tobacco smoke; no genuine lung cancers have been produced experimentally".	
11	Désignation abrégée : Proctor 2012	Archive : https://drive.google.com/open?id=1YAWDfVhDNWb1O-SiwIRQDk9lF1jC7IUw
	P. 2 : Tobacco industry laboratories conducted their own investigations: Brown and Williamson researchers identified benzpyrene in cigarette smoke in 1952, and by the end of the decade cigarette manufacturers had characterised several dozen carcinogens in cigarette smoke, including arsenic, chromium, nickel and a veritable zoo of polycyclic aromatic hydrocarbons (chrysene, methylcholanthrene, dibenzanthracene, dibenzacridene, etc). As Philip Morris	

	research director Helmut Wakeham put it in 1961, carcinogens were found in ‘practically every class of compounds in cigarette smoke’.	
12	Désignation abrégée : White 1990	Archive : https://drive.google.com/open?id=1BWQHwQt9syfRTHCefTfRF1f6QblhOLkb
	P. 8 : The Surgeon General of the United States took a similar position: "The weight of the evidence is increasingly pointed in one direction: that excess smoking is one of the causative factors in lung cancer".	
13	Nom de la page : Statistical Language - Correlation and Causation	Archive : http://archive.is/fZLZR
	Site Internet : Australian Bureau of Statistics http://www.abs.gov.au/websitedbs/a3121120.nsf/home/statistical+language+-+correlation+and+causation	
	Correlation is a statistical measure (expressed as a number) that describes the size and direction of a relationship between two or more variables. A correlation between variables, however, does not automatically mean that the change in one variable is the cause of the change in the values of the other variable. Causation indicates that one event is the result of the occurrence of the other event; i.e. there is a causal relationship between the two events. This is also referred to as cause and effect.	
14	Nom de la page : Emphysema	Archive : http://archive.is/WKTsi
	Site Internet : emedicinehealth http://www.emedicinehealth.com/emphysema/article_em.htm http://www.emedicinehealth.com/emphysema/page2_em.htm	
	The importance of cigarette smoking as a risk factor for developing emphysema cannot be overemphasized. Cigarette smoke contributes to this disease process in two ways. It destroys lung tissue, which results in the obstruction of air flow, and it causes inflammation and irritation of airways that can add to air flow obstruction.

	Site Internet : E X T O X N E T Extension Toxicology Network http://pmep.cce.cornell.edu/profiles/extoxnet/TIB/epidemiology.html	
	Epidemiological studies can never prove causation; that is, it cannot prove that a specific risk factor actually causes the disease being studied. Epidemiological evidence can only show that this risk factor is associated (correlated) with a higher incidence of disease in the population exposed to that risk factor. The higher the correlation the more certain the association, but it cannot prove the causation	

16	Titre du livre : CAUSALITY	Maison d'édition : Oxford University Press
	Auteur principal/Année : Phyllis Illari, 2014	
	<p>P. 32 :</p> <p>Rothman (1976) makes the point that in health situations what we call 'causes' are in fact components of sufficient causes, and are not sufficient in themselves. For instance, the measles virus is said to be the cause of measles, but in fact the 'complete sufficient cause' of measles also includes lack of immunity to the virus and exposure to the virus.</p> <p>[...]</p> <p>Rothman illustrates his ideas by means of 'causal pies'—see Figure 4.1—still used in epidemiology now. He thinks that a sufficient cause of a disease is generally not one single causal factor, but a complete 'causal mechanism'. Rothman takes a causal mechanism to be a minimal set of conditions and events that are sufficient for the disease to occur. In this perspective, no specific event condition or characteristic is sufficient, by itself, to produce the disease. So the definition of 'cause' does not describe a complete causal mechanism, but only a component of it.</p>	
17	Nom de la page : Research on Back Sleeping and SIDS	Archive : http://archive.is/rZIPH
	<p>Site Internet : NIH - Safe to Sleep https://www1.nichd.nih.gov/sts/campaign/science/Pages/backsleeping.aspx</p>	
	<p>The single most effective action that parents and caregivers can take to lower a baby's risk of SIDS is to place the baby to sleep on his or her back for naps and at night.</p> <p>Compared with back sleeping, stomach sleeping carries between 1.7 and 12.9 times the risk of SIDS. The mechanisms by which stomach sleeping might lead to SIDS are not entirely known. Studies suggest that stomach sleeping may increase SIDS risk through a variety of mechanisms, including:</p> <p>Increasing the probability that the baby re-breathes his or her own exhaled breath, leading to carbon dioxide buildup and low oxygen levels; Causing upper airway obstruction; Interfering with body heat dissipation, leading to overheating.</p> <p>Whatever the mechanism, evidence from numerous countries—including New Zealand, Sweden, and the United States—suggests that placing babies on their backs to sleep results in a substantial decline in the SIDS rate compared to placing babies on their stomachs to sleep.</p>	
18	Nom de la page : Prospective study	Archive : http://archive.is/zKOgQ
	<p>Site Internet : The Free Dictionary</p>	
	<p>Prospective study an epidemiologic study in which the groups of individuals (cohorts) are selected on the bases of factors that are to be examined for possible effects on some outcome .</p> <p>For example, the effect of exposure to a specific risk factor on the eventual development of a particular disease can be studied. The cohorts are then followed over a period of time to determine the incidence rates of the outcomes being studied as they relate to the original factors in question.</p> <p>The term prospective usually implies a cohort selected in the present and followed into the future...</p>	

19	Nom de la page : Retrospective study	Archive : http://archive.is/tLNNW
	Site Internet : The Free Dictionary https://medical-dictionary.thefreedictionary.com/retrospective+study	
	Retrospective study: a study in which a search is made for a relationship between one (usually current) phenomenon or condition and another that occurred in the past. An example is a study of the family histories of young women diagnosed as having clear cell adenomas of the vagina, which yielded a relationship between the administration of diethylstilbestrol to the mothers of the women during pregnancy and the development of the condition in the daughters.

	P. 583 : The second major reason for an invalid outcome in epidemiologic studies is systematic error or bias. Bias may arise in the design or conduct of a study, data collection, or data analysis. The meaning of scientific bias differs from conventional (and legal) usage, in which bias refers to a partisan point of view. When scientists use the term bias, they refer to anything that results in a systematic (nonrandom) error in a study result and thereby compromises its validity. Two important categories of bias are selection bias (inappropriate methodology for selection of study subjects) and information bias (a flaw in measuring exposure or disease in the study groups).

	"Autism and its Histories" chapter.	Revue : American Journal of Public Health
4	Désignation abrégée : Baker 2008	Archive : https://drive.google.com/open?id=1ut2gq2Ph7rf7z4pm-C2T8shDuxQDqiBY
	P. 7 : The events that would bring these three histories together began in 1997, when New Jersey Representative Frank Pallone, representing a district concerned about environmental mercury poisoning, appended a rider to the FDA Modernization Act of that year to assess all of the agency's products for mercury content. In response, the Center for Biologics Evaluation and Research (CBER) at the FDA initiated a formal risk assessment of thimerosal in vaccines beginning in April 1998. [...] Although acknowledging the many uncertainties involved, the FDA responded by inviting vaccine advisory bodies for consultation in June 1999. There followed a rapid series of meetings and conference calls involving representatives of the American Academy of Pediatrics and the Centers for Disease Control and Prevention (CDC), culminating in a joint statement released on July 9, 1999. Although noting that there was no evidence that the use of thimerosal as a vaccine preservative had caused any true harm, the groups agreed that "thimerosal-containing vaccines should be removed as soon as possible" given the concerns raised by the Environmental Protection Agency's guidelines.	

5	Désignation abrégée : Baker 2008	Archive : https://drive.google.com/open?id=1ut2gq2Ph7rf7z4pm-C2T8shDuxODqiBY
	P. 7 : Meanwhile, the third of the historical streams, represented by parents within the “alternative” autism community, rapidly entered the debate. As detailed by journalist David Kirby, it was in fact a group of parents of autistic children (rather than parental organizations critical of vaccination such as the National Vaccine Information Center) who first seized upon thimerosal as an explanation for the autism epidemic.	
6	Désignation abrégée : Baker 2008	Archive : https://drive.google.com/open?id=1ut2gq2Ph7rf7z4pm-C2T8shDuxODqiBY
	P. 7-8 : Parents organized effectively in the political realm as well. The self-designated “Mercury Moms” created an advocacy organization, Safe Minds. They were instrumental in persuading Congressman Burton to shift his focus from measles–mumps–rubella to thimerosal in his congressional hearings. And they organized successfully to oppose a rider to the Homeland Security Bill in 2003 that would protect thimerosal’s manufacturer from legal action.

	Auteur principal/Année : Marian Ołpinski, 2012	Revue : Pediatria Polska
	P. 4 : The most influential medium for parents beliefs about immunizations seems to be Internet. Approximately 74% of Americans have Internet access. In 2006, 16% of users searched online for information on immunizations or vaccinations. Over half (52%) of users believe “almost all” or “most” information on health sites are credible, yet the availability of inaccurate and deceptive information online has labeled the Internet a “modern Pandora’s box”.	

8	Titre de l'article : Vanishing Vaccinations: Why Are So Many Americans Opting Out of Vaccinating Their Children?		PMID: 15568260
	Auteur principal/Année : Steve P. Calandrillo, 2004	Revue : University of Michigan Journal of Law Reform	
	Extrait de l'abstract : The internet worsens fears regarding vaccination safety, as at least a dozen websites publish alarming information about the risks of vaccines. Increasing numbers of parents are refusing immunizations for their children and seeking legally sanctioned exemptions instead, apparently fearing vaccines more than the underlying diseases that they protect against. A variety of factors are at play: religious and philosophical beliefs, freedom and individualism, misinformation about risk, and overperception of risk. State legislatures and health departments now face a difficult challenge: respecting individual rights and freedoms while also safeguarding the public welfare.		

9	Titre de l'article : The Psychology of Anti-Vaxers: How Story Trumps Science		Date : 19 octobre 2014
	Site Internet : The Atlantic http://www.theatlantic.com/health/archive/2014/10/how-anti-vaccine-fear-takes-hold/381355/		Archive : http://archive.is/uOhEJ
	Par exemple : Jacklyn Smoot, a 26 year-old new mother from Orange, California, feels torn. Her son's pediatrician and the Centers for Disease Control and Prevention assure her that vaccines are safe and effective. Smoot hears personal stories from vaccine skeptics like her mother, some friends, and Internet bloggers, however, who warn that vaccines can cause injury or death. She wonders who is right. Smoot's struggle began when she got a flu shot in December 2012. Her mother's reaction surprised her. "She said, 'What? But you're pregnant!' She scared me," Smoot says. "I found myself online for three hours trying to figure out if it was a good idea that I had gotten the flu shot while I was pregnant." Then she got on the Internet. Smoot downloaded the recommended immunization schedule from the CDC website. She looked up each vaccine on the schedule. Although she says she tried to look at a variety of trustworthy websites, she can only remember reading any information supporting vaccination on the CDC website. Smoot, however, says she does not trust doctors and scientists. "I know they're just going to tell me they're safe, and they're recommended, and this is what you're supposed to do," she says. Dr. Neal Halsey is a professor at the Johns Hopkins Bloomberg School of Public Health and the School of Medicine. He runs the Institute for Vaccine Safety, providing independent assessment of and education on vaccine safety. "The vaccines we have available that are recommended for routine use in children are very safe vaccines," he says. Dr. Diane Griffin, a virologist and chair of the molecular biology and immunology department at Johns Hopkins, agrees. "Oh, yes, vaccines are very safe," she says. According to the CDC, vaccines in the United States are the most safe and effective immunizations in history. The CDC's website says severe reactions to vaccines "occur so rarely that the risk is difficult to calculate." "I probably find more information that says vaccines aren't safe," she says. "I think it's only because ..." She pauses. "Well, I don't really know. It could be maybe what I'm paying attention to more."

11	Titre de l'article : After \$1 billion, experts see progress on autism's causes	Date : 4 septembre 2012
	Site Internet : USA TODAY http://usatoday30.usatoday.com/news/health/story/2012-04-09/researchers-autism-causes/54129282/1	Archive : http://archive.is/ixi6Z
	<p>More than \$1 billion has been spent over the past decade searching for the causes of autism. In some ways, the research looks like a long-running fishing expedition, with a focus on everything from genetics to the age of the father, the weight of the mother, and how close a child lives to a freeway.[...] The lion's share of money for finding a cause has been spent on genetics. [...]</p> <p>But even genetics enthusiasts acknowledge that genes are only part of the answer. Studies of identical twins have shown that autism can occur in one and not the other, meaning something outside a child's DNA is triggering the disorder in many cases. Some cases may be entirely due to other causes, Dawson said.</p> <p>That broad "other" category means "environmental" influences — not necessarily chemicals, but a grab bag of outside factors that include things like the age of the father at conception and illnesses and medications the mother had while pregnant.</p>	
12	Titre de l'article : Vaccination Patterns in Children After Autism Spectrum Disorder Diagnosis and in Their Younger Siblings https://relaped.com/wp-content/uploads/2018/03/3-1.pdf	PMID: 29582071
	Auteur principal/Année : Ousseny Zerbo, 2018	Revue : JAMA Pediatrics
	P. 2 : The etiology of ASD is unknown for the vast majority of cases; however, study findings suggest that both genetic and environmental factors have a role.	
	Nom de la page : Causes-Autism spectrum disorder (ASD)	Archive : http://archive.is/7kOxv
	Site Internet : NHS website http://www.nhs.uk/Conditions/Autistic-spectrum-disorder/Pages/Causes.aspx	
	Most researchers believe that certain genes a child inherits from their parents could make them more vulnerable to developing ASD. Cases of ASD have been known to run in families. For example, younger siblings of children with ASD can also develop the condition, and it's common for identical twins to both develop ASD. No specific genes linked to ASD have been identified, but it may be a presenting feature of some rare genetic syndromes, including Fragile X syndrome, Williams syndrome and Angelman syndrome.	
	Titre de l'article : Autism's Tangled Genetics Full of Rare and Varied Mutations	Date : 8 juin 2011

	Site Internet : Scientific American	Archive : http://archive.is/jftAe
	Large genetic studies have ruled out the idea that the malfunction of a universal gene or set of genes causes autism. And the new papers, which assessed the genomes of about 1,000 families that had only one autistic child, revealed that the genetic mutations that are likely responsible for the disorder are exceedingly rare—sometimes almost unique to an individual patient. Even some of the most common point of mutations were found in only about 1 percent of autistic children.

	Auteur/Année : NAS, 1992	Archive : https://drive.google.com/open?id=1782CNgkLfXgxmkd3NtBj0diDm8PJjBb5
	<p>P. 36 :</p> <p>Until the past decade, scientists, research institutions, and government agencies relied solely on a system of self-regulation based on shared ethical principles and generally accepted research practices to ensure integrity in the research process. Among the very basic principles that guide scientists, as well as many other scholars, are those expressed as respect for the integrity of knowledge, collegiality, honesty, objectivity, and openness. These principles are at work in the fundamental elements of the scientific method, such as formulating a hypothesis, designing an experiment to test the hypothesis, and collecting and interpreting data. In addition, more particular principles characteristic of specific scientific disciplines influence the methods of observation; the acquisition, storage, management, and sharing of data; the communication of scientific knowledge and information; and the training of younger scientists. How these principles are applied varies considerably among the several scientific disciplines, different research organizations, and individual investigators.</p>

	Site Internet : NSF website https://www.nsf.gov/nsb/documents/1997/nsb97186/nsb97186.htm#federal	

	<p>Within the Federal budget, there should be an overall strategy for research, with areas of increased and areas of decreased emphasis... To ensure the most effective use of Federal discretionary funding it is essential that agreement be reached on which fields and which investment strategies hold the greatest promise for new knowledge that will contribute most effectively to better health, greater equity and social justice, improved living standards, a sustainable environment, a secure national defense, and to extending our understanding of nature.</p>	
	<p>Un scientifique de Yale confesse les « biais de financement » qu'il a commis dans certaines de ses études, financées à la fois par des entreprises privées et des agences gouvernementales, et explique le système de pression sous lequel fonctionnent les organismes gouvernementaux qui financent la recherche.</p> <p>Titre de l'article : Research Funding: When Is the Money Dirty?</p>	<p>Date : 13 juin 2014</p>
	<p>Site Internet : Huffington Post https://www.huffingtonpost.com/david-katz-md/research-funding-when-is-b_5493613.html</p>	<p>Archive : http://archive.is/Mz2fY</p>
	<p>All research starts with biased funders and researchers — because in the absence of such bias, it would be research no one would bother doing. I don't think anyone runs studies in the absence of hopes and preferences pertaining to the outcomes. [...] So, too, do all funders. While the NIH does not generally manufacture and sell the interventions it studies, it certainly does care about the outcomes. NIH, too, must justify its existence, and budget — just not to shareholders. NIH and all federal agencies are accountable to Congress, and by extension to us, in our tax-paying multitudes. NIH competes in the federal budget with other societal priorities (and, no doubt, pork-barrel boondoggles); and perhaps more intensely, the various institutes compete with one another for slices of the common pie. Too many negative study results tend to suggest that an institute is not spending money all that well and wisely — and affect the outcome of that competition. Even NIH program officers are biased about study outcomes.</p>

	<p>A few years ago, David Sinclair's lab was slipping through his fingers. With grant money running dry and the outlook for overall federal research budgets bleak, the Harvard geneticist was losing lab members because he couldn't support them with funding from the National Institutes of Health (NIH), as he had done in years past. Sinclair says his 18-person-strong group dwindled to just four or five people. "And that was painful," he recalls. "I had to let people go for lack of money." And Sinclair says he's not alone. "Even at a place like Harvard, I know [other] labs that have downsized dramatically and even closed down," he says. "So it's hit across the board."</p>

37	Titre de l'article : Denmark scientist accused of stealing autism research money	Date : 13 avril 2011
	Site Internet : Reuters	Archive : http://archive.is/h1qLN
	A scientist in Denmark has been indicted by a federal grand jury in Atlanta for allegedly stealing \$1 million in grant money that the Centers for Disease Control and Prevention had earmarked for autism research. U.S. prosecutors on Wednesday said they are seeking to extradite Poul Thorsen, 49, accused of wire fraud and money laundering. He used the stolen money to buy a home in Atlanta, a Harley Davidson motorcycle and two cars, prosecutors said. [...] Thorsen, a visiting scientist at the Atlanta-based CDC in the 1990s, helped two government agencies in Denmark obtain \$11 million in research grants. He moved back to Denmark in 2002 to be principal investigator for the program. Prosecutors said he was also in charge of administering the research dollars, earmarked in part to study the relationship between autism and exposure to vaccines.

TABLE 2. ADJUSTED RELATIVE RISK OF AUTISTIC DISORDER AND OF OTHER AUTISTIC-SPECTRUM DISORDERS IN VACCINATED AND UNVACCINATED CHILDREN.*

VACCINATION	PERSON-YEARS†	AUTISTIC DISORDER		OTHER AUTISTIC-SPECTRUM DISORDERS	
		NO. OF CASES	ADJUSTED RELATIVE RISK (95% CI)	NO. OF CASES	ADJUSTED RELATIVE RISK (95% CI)
Total Vaccination	2,129,864	316		422	
No	482,360	53	1.00	77	1.00
Yes	1,647,504	263	0.92 (0.68–1.24)	345	0.83 (0.65–1.07)

Researchers Calculations

MMR Status	Person Years	No. Autistic Kids	Adjusted Relative Risk
Unvaccinated	482,360	53	1.00
Vaccinated	1,647,504	263	0.92
Conclusion	Vaccinated kids have lower autism risk		

Calculation without Adjustments

MMR Status	Person Years	Autistic Children	Years/Child	Relative Risk
Unvaccinated	482,360	53	9,101	1.00
Vaccinated	1,647,504	263	6,264	1.45
Conclusion	Vaccinated kids have higher (45%) autism risk

	"This study looked into the concern that receiving too many vaccines at one doctor's visit or too many vaccines during the first two years of life may be linked to the development of autism," the report's lead author, Dr. Frank DeStefano told NBC chief medical editor Dr. Nancy Snyderman. "We found they're not related." DeStefano hopes the new research will convince parents that it's safe to follow CDC vaccination schedules. [...] "The number of vaccines in the current immunization schedule is what's needed to protect children," he said. "It's not too many for a child's immune system."

Abstract

Objectives

The aim of this study was to investigate whether the quadrivalent human papillomavirus (HPV) vaccine Gardasil is associated with a change in the risk of autoimmune disorders (ADs) in young female subjects.

Design

Systematic case-control study of incident ADs associated with quadrivalent HPV vaccination in young women across France.

	As the mercury-containing preservative thimerosal was removed from vaccines, and as fewer children received the mumps-measles-rubella vaccine, the rates of autism and related disorders rose among Canadian school children. In a study of nearly 28,000 children born between 1987 and 1998, the prevalence of pervasive developmental disorders was greater in those children vaccinated after the mercury-containing compound thimerosal was completely eliminated from vaccines in Canada, reported Eric Fombonne, M.D., of McGill University in Montreal, and colleagues.

	Recently there's increasing emphasis on trying to have post-publication review. Once a paper is published, you can comment on it, raise questions or concerns. But most of these efforts don't have an incentive structure in place that would help them take off. There's also no incentive for scientists or other stakeholders to make a very thorough and critical review of a study, to try to reproduce it, or to probe systematically and spend real effort on re-analysis. We need to find ways people would be rewarded for this type of reproducibility or bias checks.

	Auteur/Année : John Gibbs, 1856		Archive : https://drive.google.com/open?id=1_bol5t6Zyrnej9goXH9P2fmoTQYrMI8X
	P. 10-11 : The main question for the consideration of science is not whether vaccination be a protection against one form of disease, but what is its general influence upon the constitution? [...] What is the percentage of deaths before a given age, from all epidemics, amongst the vaccinated, as compared with the unvaccinated? What is the percentage respectively of cases of disease of the respiratory organs, of skin diseases, of scrofula, and of convulsions? What is the average duration of life amongst the vaccinated and amongst the unvaccinated? Of a thousand children vaccinated within a given time after birth, and of a thousand unvaccinated, the whole two thousand being placed as nearly as possible in like circumstances, what percentage in each thousand attain the age of puberty? These are statistics with which the advocates of vaccination have never grappled.

	<p>In contrast, a real study in Germany, "Vaccination Status and Health in Children and Adolescents," looked at medical records from KiGGS to see "whether unvaccinated children and adolescents differ from those vaccinated in terms of health."</p> <p>The diseases they looked at included allergies, eczema, obstructive bronchitis, pneumonia and otitis media, heart disease, anemia, epilepsy, and attention deficit hyperactivity disorder (ADHD).</p> <p>Not surprisingly, this second study did find that unvaccinated children were more likely to get vaccine-preventable diseases. However, it also concluded that "the prevalence of allergic diseases and non-specific infections in children and adolescents was not found to depend on vaccination status."</p> <p>So, since these unvaccinated and vaccinated children had the same incidence of allergies, pneumonia, and other conditions, etc., plus unvaccinated children were also more likely to have vaccine-preventable diseases, such as measles and mumps, that hardly sounds like unvaxed kids are healthier.</p>

27	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXlEMGix9miyZMhiRIVtW
	P. 20 (37) : On June 2, 2009, the National Vaccine Advisory Committee (NVAC) reviewed the nation's vaccine safety system and endorsed the recommendation of the NVAC Safety Working Group for an external expert committee, such as a committee convened by the Institute of Medicine (IOM), "with broad expertise in research methodologies, study design, and the ethical conduct of research to consider the strengths and weaknesses, ethical issues and feasibility including timelines and cost of various study designs to examine outcomes in	

	<p>unvaccinated, vaccine-delayed and vaccinated children and report back to the NVAC” [...]</p> <p>The National Vaccine Program Office of HHS asked the IOM to convene a diverse committee of experts in pediatrics, neurology, medical ethics, immunology, statistics, epidemiology, and public health to identify study designs feasible to address questions about the safety of the United States’ childhood immunization schedule.</p>
--	---

28	<p>Désignation abrégée : IOM 2013</p>	<p>Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW</p>
	<p>P. 21 (38) : Identify potential research approaches, methodologies, and study designs that could inform this question, including an assessment of the potential strengths and limitations of each approach, methodology and design, as well as the financial and ethical feasibility of doing them.</p>	

29	<p>Désignation abrégée : IOM 2013</p>	<p>Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW</p>
	<p>P. 17 (34) : Vaccines have significantly contributed to worldwide reductions in morbidity and mortality by reducing the incidence of serious infectious diseases [...] However, as the incidence of vaccine- preventable disease has declined, many do not appreciate the potential of these diseases to reemerge, and the potential adverse effects of the vaccines themselves take on greater saliency among certain stakeholders. Indeed, vaccine safety concerns exist among a diverse range of individuals, institutions, and formal and informal networks worldwide.</p>	

30	<p>Nom de la page : Vaccine Safety</p>	<p>Archive : http://archive.is/TJ196</p>
	<p>Site Internet : CDC http://www.cdc.gov/Features/VaccineSafety/</p>	
	<p>The safety of vaccines is thoroughly studied before they are licensed for public use. Clinical trials are conducted to evaluate the safety and effectiveness of a vaccine before it can be brought to market. Vaccines are first tested in laboratory studies and animal studies. If the results indicate the vaccine is safe, additional testing in people must be done before the vaccine can be approved by the Food and Drug Administration (FDA).</p>	

31	<p>Désignation abrégée : IOM 2013</p>	<p>Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW</p>
	<p>P. 5 (22) : No studies have compared the differences in health outcomes that some stakeholders questioned between entirely unimmunized populations of children and fully immunized children.</p>	

32	<p>Désignation abrégée : IOM 2013</p>	<p>Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW</p>
	<p>P. 11 (28) : Most vaccine-related research focuses on the outcomes of single immunizations or combinations of vaccines administered at a single visit.</p>	

33	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 11 (28) : Thus, key elements of the entire schedule—the number, frequency, timing, order, and age at administration of vaccines—have not been systematically examined in research studies.	
34	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 130 (147) : Even though each new vaccine is evaluated in the context of the overall immunization schedule that existed at the time of review, individual elements of the schedule are not evaluated once it is adjusted to accommodate a new vaccine. P. 31 (48) : Although this process results in an evaluation of whether the observed benefits outweigh the observed risks for the new vaccine and, by extension, for the schedule, it does not include studies specifically designed to test variations in the schedule in an effort to identify the optimal schedule.	
35	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 11 (28) : The second major issue that the committee encountered was uncertainty over whether the scientific literature has addressed all health outcomes and safety concerns. The committee could not tell whether its list was complete or whether a more comprehensive system of surveillance might have been able to identify other outcomes of potential significance to vaccine safety. In addition, the conditions of concern to some stakeholders such as immunologic, neurologic, and developmental problems are illnesses and conditions for which etiologies, in general, are not well understood.	
36	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 11 (28) : Finally, the committee found that evidence assessing outcomes in subpopulations of children who may be potentially susceptible to adverse reactions to vaccines (such as children with a family history of autoimmune disease or allergies or children born prematurely) was limited and is characterized by uncertainty about the definition of populations of interest and definitions of exposures and outcomes.	
37	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 11 (28) : In summary, to consider whether and how to study the safety and health outcomes of the entire childhood immunization schedule, the field needs valid and accepted metrics of the entire schedule (the “exposure”) and clearer definitions of health outcomes linked to stakeholder concerns (the “outcomes”) in rigorous research that will ensure validity and generalizability.

44	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 130 (147) : In summary, to consider whether and how to study the safety and health outcomes of the entire childhood immunization schedule, the field needs... clearer definitions of health outcomes linked to stakeholder concerns...	
45	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 114 (131) Original study: Glanz 2013	
46	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 109 (126) pour l'ECR ; p. 111 (128) pour l'étude prospective	
47	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 118 (135) : In addition, the VSD system has a large enough proportion of unvaccinated children to investigate differences in health outcomes of unvaccinated and vaccinated children.	
48	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	<p>Sur l'ECR testant un calendrier vaccinal différent : p. 107 (124) : Although it is unobjectionable ethically, the committee considered the time and financial strains resulting from immunization on a dispersed schedule to be too prohibitively costly to recommend pursuing this line of research and, thus, does not endorse this method as a feasible option for studying the recommended immunization schedule.</p> <p>Sur l'étude prospective : p. 112 (129) : ...the limits of studying distinct subgroups of naturally occurring unimmunized populations, and the high cost of pursuing prospective data collection, the committee does not consider the initiation of new prospective cohort studies to be the most feasible or fruitful approach to studying the recommended immunization schedule at this time.</p>	
49	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 108 (125) : Unless researchers somehow accounted for the occurrence of the more serious preventable diseases, it may appear that nonvaccination is "safer" in this respect. To further complicate matters, the rare unvaccinated child in an otherwise heavily vaccinated area will benefit from community immunity and may thus appear to have done better than his or her peers, some of whom will develop adverse effects, such as fever.	

50	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	<p>P. 111 (128) :</p> <p>However, such a study would have limited utility to accurately assess differences in health outcomes between unimmunized and fully immunized children... the study would need to account for the many confounding variables that distinguish distinct subgroups of naturally occurring unimmunized populations from the rest of the U.S. population, including lifestyle factors and known genetic variables that may play a role in the development of allergies, asthma, and other conditions.</p>

61-73

61	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 20 (37) : The NVAC report stated that “the strongest study design, a randomized clinical trial that includes a study arm receiving no vaccine or vaccine not given in accord with the current recommended schedule, is not ethical, would not pass Institutional Review Board (IRB) review, and cannot be done”... Furthermore, it may be impossible to draw unbiased results from an observational study of this issue because of potential differences in baseline health and social characteristics of populations and subgroups.	

62	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 127 (144) : The committee made a judgment based on the literature that failed to link adverse effects to schedule exposures or multiple immunizations, concluding that there is no evidence that the schedule is not safe.	

63	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 127 (144) : The committee recognized that final decisions about research studies must await knowledge of further evidence, including biological plausibility and/or epidemiological evidence, feasibility, cost, and the exact circumstances of stakeholder concerns, before the planning and conduct of specific research projects.	
64	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	P. 132 (149) : The committee recognizes that the establishment of priorities for research will be a challenge. Thus, the committee proposes a process for setting priorities that recognizes stakeholder concerns and establishes these priorities on the basis of epidemiological and other evidence (based on formal systematic reviews), biological plausibility, and feasibility.	
65	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	Recommandation 4-1, p. 129 (146) : Recommendation 4-1: The committee recommends that the National Vaccine Program Office systematically collect and assess evidence regarding public confidence in and concerns about the entire childhood immunization schedule, with the goal to improve communication with health care professionals, and between health care professionals and the public regarding the safety of the schedule.	
66	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	Recommandation 6-3, p. 118 (135) : Recommendation 6-3: The committee recommends that the Department of Health and Human Services (HHS) and its partners continue to fund and support the Vaccine Safety Datalink project to study the safety of the recommended immunization schedule. Furthermore, HHS should consider expanding the collaboration with new health plan members and enhancing the data to improve its utility and generalizability.	
67	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	Recommandation 6-2, p. 134 (151) : Recommendation 6-2: The Department of Health and Human Services should refrain from initiating randomized controlled trials of the childhood immunization schedule that compare safety outcomes in fully vaccinated children with those in unvaccinated children or those vaccinated by use of an alternative schedule.	

68	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	Recommandation 5-1, p. 130 (147) : Recommendation 5-1: To improve the utility of studies of the entire childhood immunization schedule, the committee recommends that the National Vaccine Program Office develop a framework that clarifies and standardizes definitions of key elements of the schedule, relevant health outcomes, and populations that are potentially susceptible to adverse events.	
69	Désignation abrégée : IOM 2013	Archive : https://drive.google.com/open?id=1no7T_Zx03ToHXIEMGix9miyZMhiRIVtW
	Recommandation 6-1, p. 132 (149) : Recommendation 6-1: The committee recommends that the Department of Health and Human Services incorporate study of the safety of the overall childhood immunization schedule into its processes for setting priorities for research, recognizing stakeholder concerns, and establishing the priorities on the basis of epidemiological evidence, biological plausibility, and feasibility.

8	Nom du document (traduit de l'hébreu) : Immunization Guide https://drive.google.com/open?id=1db5nqObGNRg8QwTaOUuTARsisHIPrf4U		Auteur/Année : Israeli Ministry of Health, 2015
	Par exemple, p. 52 (traduit de l'hébreu) : Simultaneous administration of most vaccines, live-attenuated or killed, does not increase the extent of post-vaccination side effects and does not affect the efficacy of any of them.		

	Nom de la page (traduit de l'hébreu) : Common Questions		Archive : http://archive.is/aiHZ0
	Site Internet : "Vaccines" website of Wolfson Hospital http://chisunim.co.il/Faq.aspx?cat=2&id=5		
	"Should I split the vaccines or spread it over a longer period in order to reduce the burden on the baby's immune system? No! The part of the immune system that we use when giving the vaccines is negligible compared to the real and full capacity of the immune system, and therefore the concern of overloading is baseless."		

9	Titre de l'article : Reduced Rate of Side Effects Associated with Separate Administration of MMR and DT aP-Hib-IPV Vaccinations		PMID: 20166340
	Auteur principal/Année : Elena Shneyer, 2009	Revue : Israeli Medical Association Journal	

10	Titre de l'article : Reduced Rate of Side Effects Associated with Separate Administration of MMR and DT aP-Hib-IPV Vaccinations https://www.ncbi.nlm.nih.gov/pubmed/20166340		PMID: 20166340
	Auteur principal/Année : Elena Shneyer, 2009	Revue : Israeli Medical Association Journal	
	P. 2 : Nurses at a primary care clinic in the Afula region observed that the mode of separate administration of these vaccines is associated with a lower rate of adverse effects.		

11	Titre de l'article : Reduced Rate of Side Effects Associated with Separate Administration of MMR and DT aP-Hib-IPV Vaccinations https://www.ncbi.nlm.nih.gov/pubmed/20166340		PMID: 20166340
	Auteur principal/Année : Elena Shneyer, 2009	Revue : Israeli Medical Association Journal	
	P. 2		

12	Titre de l'article : Reduced Rate of Side Effects Associated with Separate Administration of MMR and DT aP-Hib-IPV Vaccinations https://www.ncbi.nlm.nih.gov/pubmed/20166340		PMID: 20166340
	Auteur principal/Année : Elena Shneyer, 2009	Revue : Israeli Medical Association Journal	
	P. 3 : The rate of adverse reaction among children who were vaccinated separately was significantly lower than in those who were vaccinated simultaneously: 28 of 74 (37.8%) versus 58 of 102 (56.9%).		

13	Titre de l'article : Reduced Rate of Side Effects Associated with Separate Administration of MMR and DT aP-Hib-IPV Vaccinations https://www.ncbi.nlm.nih.gov/pubmed/20166340		PMID: 20166340
	Auteur principal/Année : Elena Shneyer, 2009	Revue : Israeli Medical Association Journal	
	P. 4 : In this study it was demonstrated that the rate of adverse effects in the separately vaccinated group was significantly lower than in the simultaneously vaccinated group. The results of this study do not support the national recommendation of simultaneous vaccinations of MMR and DTaP-Hib-IPV. Rather, our data call for reconsideration of the current policy of simultaneous injections of MMR and DTaP-Hib-IPV – at least until a larger study is conducted.		

14	Titre de l'article (traduit de l'hébreu) : Israeli study: Do not give 2 vaccines together at age one year		Date : 6 janvier 2010

15	Nom de la page : Administering Vaccines		Archive : http://archive.is/MASlj
	Site Internet : Immunization Action Coalition http://www.immunize.org/askexperts/administering-vaccines.asp		
	How many vaccines can be given during an office visit? All vaccines can be administered at the same visit. There is no upper limit for the number of vaccines that can be administered during one visit.		

16	Titre de l'article : Dr. Paul Offit: Debunking The Vaccine-Autism Link		Date : 24 octobre 2008
	Site Internet : Newsweek https://www.newsweek.com/dr-paul-offit-debunking-vaccine-autism-link-91933		Archive : http://archive.is/kggwm
	Recently, Offit set off a flurry of angry postings when he said that a baby's immune system could handle as many as 10,000 vaccines. Then he upped the ante, saying it was probably "closer to 100,000." Offit's assessment is based on data showing the vast capacity of a child's immunological response.		

17	Titre de l'article : Addressing Parents' Concerns: Do Multiple Vaccines Overwhelm or Weaken the Infant's Immune System? https://www.aap.org/en-us/Documents/immunization_overwhelm.pdf		PMID: 11773551
			Archive : https://drive.google.com/open?id=1N8EXqxq8RbTprBp0fZ1Wegd8Qz_BCn5r
	Auteur principal/Année : Paul A. Offit, 2002	Revue : Pediatrics	
	P. 3 : ...each infant would have the theoretical capacity to respond to about 10,000 vaccines at any one time.		

18	Nom de la page : Combination vaccines and multiple vaccinations		Archive : http://archive.is/1LpaD
	Site Internet : University of Oxford - The Vaccine Knowledge Project http://vk.ovg.ox.ac.uk/combination-vaccines-and-multiple-vaccinations		
	Each millilitre of blood contains ten million B cells, the white blood cells that are associated with the immune response. It is estimated that this would be enough to cope with thousands of vaccines at a time, meaning that a baby's immune system is not stretched at all by receiving several vaccines at once.		

	Nom de la page (traduit de l'hébreu) : Common Questions		Archive : http://archive.is/t2k1K
	Site Internet : "Vaccines" website of Wolfson Hospital http://chisunim.co.il/Claim.aspx?cat=1&id=3&l=1		
	"Another common claim is that vaccines cause an unbearable burden on the immune system. The addition of new vaccines only increases this concern. In reality, a baby's immune system can respond to about 100,000 different organisms (bacteria, viruses, etc.). Therefore, vaccinating against 10 organisms will use 0.01% of the active immune capacity."		

19	Titre du document : Immunization Safety Review: Multiple Immunizations and Immune Dysfunction https://www.nap.edu/catalog/10306/immunization-safety-review-multiple-immunizations-and-immune-dysfunction	Archive : https://drive.google.com/open?id=1QujT3DieBvlChf3vi4h18hjK1OQzx4Cp
	Auteur principal/Année : IOM, 2002	
	P. 6 (21) : This is consistent with the theoretical estimates presented to the committee, which suggest that the capacity of the infant's immune system is at least 1000 times greater than that maximally required to respond to vaccines.

Chapitre 8 : La disparition de la maladie

1-20

1	Titre de l'article : The Importance of Social Intervention in Britain's Mortality Decline c.1850-1914: a Re-interpretation of the Role of Public Health https://pdfs.semanticscholar.org/a350/8f97eff18b8cffb5ccd8c87feda108895c58.pdf		Archive : https://drive.google.com/open?id=1c8AaRwdKf2O1On-VT0pI34G8xCEBWOIj
	Auteur principal/Année : Simon Szreter, 1988	Revue : Social History of Medicine	
	P. 34 : Thomas McKeown was born in 1912 and came to England from Canada as a postgraduate on a Rhodes scholarship, completing an Oxford D.Phil, in the Department of Human Anatomy in 1939. He then underwent formal medical training, acquiring an MB in the University of London in 1942. Apparently, he was offered the Chair in the new discipline of Social Medicine at Birmingham in 1944 because he had so impressed the interviewing panel when he unsuccessfully applied for the Chair of Anatomy the previous year (which went to Solly Zuckerman).		

2	Désignation abrégée : Szreter 1988		Archive : https://drive.google.com/open?id=1c8AaRwdKf2O1On-VT0pI34G8xCEBWOIj
	P. 2 : This work achieved something of a conceptual revolution in the disciplines of history and medicine, overturning a long-standing general orthodoxy regarding the importance of medical science and the medical profession in bringing about the decline in mortality which accompanied industrialization in Britain. It effectively demonstrated that those advances in the science of medicine which form the basis of today's conventional clinical and hospital teaching and practice, in particular the immuno- and chemo-therapies, played only a very minor role in accounting for the historic decline in mortality levels.		

3	Titre de l'article : Reasons for the Decline of Mortality in England and Wales during the Nineteenth Century https://www.jstor.org/stable/2173119		
	Auteur principal/Année : Thomas McKeown , 1962	Revue : Population Investigation Committee	
	P. 7 : Since 1837 knowledge of the birth rate and the death rate of England and Wales has been available from national sources.		

4	Titre de l'article : An Interpretation of the Modern Rise of Population in Europe https://www.jstor.org/stable/2173815	
	Auteur principal/Année : Thomas McKeown , 1972	Revue : Population Investigation Committee
	P. 6 : The nature of infectious disease was not understood before 1850; infectious organisms affecting man were not identified until the last quarter of the nineteenth century, and specific prevention or treatment is unlikely to have had much influence on the national death rate before the introduction of chemotherapy in the nineteen thirties.	
5	Désignation abrégée : McKeown 1962	Lien : https://www.jstor.org/stable/2173119
	Page 12, le tableau 3 montre la baisse de la mortalité due à la tuberculose et à d'autres grandes maladies infectieuses au cours de la deuxième moitié du XIX ^e siècle.	
6	Désignation abrégée : McKeown 1962	Lien : https://www.jstor.org/stable/2173119
	P. 29 : The effect of therapy was restricted to smallpox and hence had only a trivial effect on the total reduction of the death rate. Et p. 2 : ...with the notable exception of vaccination against smallpox, specific preventive or curative measures could have had no significant influence on mortality before the twentieth century, and that we must look elsewhere for the explanation of the rise of population.	
7	Titre de l'article : An Interpretation of the Decline of Mortality in England and Wales during the Twentieth Century http://www.jstor.org/stable/2173935	
	Auteur principal/Année : Thomas McKeown , 1975	Revue : Population Investigation Committee
	P. 3 : From the standardized rates it is clear that, with a short interruption in the fall of the male rate during the war years, mortality in both sexes has been declining since the beginning of the century.	
8	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	P. 11 : The last column of Table 4 summarizes the decline in mortality which occurred between 1901 and 1971. Approximately three-quarters (73 4 per cent) of the reduction was associated with the infections and one-quarter (26-6 per cent) with other conditions.	

9	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 11 :</p> <p>It is clear that the 1930s were a watershed in the history of treatment of infectious diseases, with the introduction of the sulphonamides followed, in the next decade, by the antibiotics. Since there were few effective therapeutic measures before 1935, it is interesting to consider the extent of the improvement in mortality from infections before and after this time. Table 5 shows the proportion of the total reduction which had occurred by 1931. Among the infections 56 per cent of the decline in mortality over the whole period (1901-71) occurred before 1931; among other conditions the proportion was 58 per cent. That is to say, in both cases more than half of the improvement took place in the first three of the seven decades, before the modern era of effective chemotherapy.</p>	
10	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 23 :</p> <p>There was no effective treatment of scarlet fever before the use of prontosil in 1935. But, by the beginning of the century, mortality from the disease had fallen to a relatively low level (see Table 9), and between 1901 and 1971 the disease was associated with only 1·2 per cent of the total reduction from all causes. 89 per cent of this improvement occurred before the introduction of the sulphonamides.</p>	
11	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 12, tableau 4 :</p> <p>Dysentery and diarrhea went down 87% by 1931.</p>	
12	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 22 :</p> <p>There is, therefore, little doubt that the death rate would have continued to fall even if effective therapeutic measures had not been applied. However, the decline was greatly accentuated by chemotherapy... We conclude that although therapy cannot be credited with the whole of the reduction since that time (3·6 per cent of the total) it was responsible for most of it.</p>	
13	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 25 :</p> <p>Whooping cough was associated with 2·7 per cent of the reduction in mortality from all causes. Treatment by sulphonamides and (later) antibiotics was not available before 1938, and even now its effect on the course of the disease is questionable. Immunization was used widely from 1952; the protective effect is variable, and has been estimated to lie between less than 20 and over 80 per cent. Mortality from whooping cough began to decline from the seventh decade of the nineteenth century, and 86 per cent of the reduction since 1901 occurred before the introduction of the sulphonamides.</p>	

14	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 25 :</p> <p>Mortality fluctuated before 1915, but fell rapidly from that time. Between 1901 and 1971 the disease was responsible for 2.4 per cent of the total reduction. Effective specific measures against measles have only recently become available in the form of immunization and they can have had no significant effect on the trend of the death rate. However, mortality from the disease was attributable largely to invasion by secondary organisms, which have been treated by chemotherapy since 1935. 82 per cent of the decrease of deaths from measles had occurred before this date.</p>	
15	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 25 :</p> <p>The disease was associated with 2.4 per cent of the fall of mortality from all causes between 1901 and 1971. It is not possible to assess with any precision the relative importance of the various influences which may have contributed. Antitoxin was first used in the late nineteenth century and has been the accepted form of treatment since that time. It is believed to have reduced the case fatality rate, which fell from 8.2 per 100 notifications in 1916-25 to 5.4 in 1933-42, while notifications remained at an average level of above 50,000 per year. The mortality rate increased at the beginning of the last war, but fell rapidly at about the time when national immunization was introduced.</p>	
16	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 25 :</p> <p>It is tempting to attribute much of the decline of diphtheria mortality between 1901 and 1931 to treatment by antitoxin, and the rapid fall since 1941 to immunization. Nothing in British evidence is seriously inconsistent with this interpretation; however, experience in some other countries is not so consistent. Moreover, as already noted, other infections declined in the same period in the absence of effective prophylaxis or treatment.</p>	
17	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	<p>P. 20, tableau 9 :</p> <p>The decrease in pertussis, diphtheria and measles is 7.5% of the overall decrease in deaths. In P 11 it is noted that the decline in infectious diseases was amounted to 75% of the overall decline in mortality. Thus, the decrease in pertussis, diphtheria and measles is about 10% of the the decline in mortality from infectious diseases.</p>	
18	Désignation abrégée : McKeown 1972	Lien : http://www.jstor.org/stable/2173935
	<p>P. 30 :</p> <p>There remains for consideration a miscellaneous group of conditions. Some of them are well- recognized infectious diseases which caused few deaths in this century, either because they were uncommon (as in the case of malaria, tetanus, poliomyelitis and encephalitis) or, because al- though common they were not often lethal (as in the case of mumps, chickenpox and German measles).</p>	

19	Désignation abrégée : McKeown 1972	Lien : https://www.jstor.org/stable/2173815
	<p>P. 39 :</p> <p>Although data for the nineteenth century are seriously deficient, analysis by cause of death for the four countries and England and Wales leaves little doubt that the decline of mortality was due to a reduction of deaths from infectious disease, almost wholly until 1900 and predominantly after that time. Vaccination against smallpox is the only medical measure likely to have been effective before the present century and it was not until 1935, with the introduction of the sulphonamides, that therapy became available which reduced mortality from infection to an extent that could be expected to lower the national death rate.</p>	
20	<p>L'étude Colgrove 2002 (voir la référence 88 de ce chapitre) détaille les arguments avancés contre les travaux de McKeown, notamment à la page 3. Szreter non plus (Szreter 1988, p. 6 et 11) ne critique pas la qualité des données de McKeown.</p>	

21-40

21	Désignation abrégée : Szreter 1988	Archive : https://drive.google.com/open?id=1c8AaRwdKf2O1On-VT0pI34G8xCEBWOIj
	<p>P. 2-3 :</p> <p>It should be stressed at the outset that this achievement of McKeown's work, in deflating the historical claims of one particular section of the medical profession and its 'high tech' invasive and biochemical medicine, remains unaffected by the arguments set out below. McKeown's unanswerable point is precisely that this modern kind of applied medical science virtually did not exist during the period addressed here.</p> <p>Et p. 9 :</p> <p>The chapter then proceeded to demonstrate for each of the major diseases in turn that, with the exception of smallpox and diphtheria, the dates at which either effective immunization procedures or scientific medical treatments first became available were often far too late in time to be able to account for all but the last few percentage points of the overall decline of the disease. This was certainly true of respiratory tuberculosis, measles, and scarlet fever; and broadly true for whooping cough and the bronchitis, pneumonia, and influenza group. All had been declining very considerably in incidence long before effective chemotherapy or other scientific techniques had become available.</p>	

22	Titre de l'article : The Questionable Contribution of Medical Measures to the Decline of Mortality in the United States in the Twentieth Century https://archive.org/details/McKinlayQuestionableContribution		Archive : https://drive.google.com/open?id=1N9Vt2A2iPPZW_Hkwc_04IEMN1dIwEs65Q
	Auteur principal/Année : John B. McKinlay, 1977		Revue : The Milbank Memorial Fund Quarterly. Health and Society
	<p>P. 11 :</p> <p>Between 1900 and 1973, there was a 69.2 percent decrease in overall mortality... Of the total fall in the standardized death rate between 1900 and 1973, 92.3 percent occurred prior to 1950... A major part of the decline in deaths from these causes since about 1900 may be attributed to the virtual disappearance of these infectious diseases.</p>

34	Titre de l'article : Annual summary of vital statistics: trends in the health of Americans during the 20th century	
	PMID: 11099582	
	Auteur principal/Année : Bernard Guyer, 2000	Revue : Pediatrics
	<p>P. 8-9 : For children older than 1 year of age, the overall decline in mortality experienced during the 20th century has been spectacular. [...] Nearly 85% of this decline took place before World War II, a period when few antibiotics or modern vaccines and medications were available.[...] Once again, nearly 90% of the decline in infectious disease mortality among US children occurred before 1940, when few antibiotics or vaccines were available.</p> <p>P. 10 : Vaccination, while first used in the 18th century, became more widely implemented in the middle part of the century. Vaccines against diphtheria, tetanus, and pertussis became available during the late 1920s but only widely used in routine pediatric practice after World War II. Thus vaccination does not account for the impressive declines in mortality seen in the first half of the century.</p>

	The National Malaria Eradication Program was a cooperative undertaking by state and local health agencies of 13 southeastern states and the Communicable Disease Center of the U. S. Public Health Service, originally proposed by Dr. L. L. Williams. The program commenced operations on July 1, 1947. It consisted primarily of DDT application to the interior surfaces of rural homes or entire premises in counties where malaria was reported to have been prevalent in recent years... Total elimination of transmission was slowly achieved. In 1949, the country was declared free of malaria as a significant public health problem.	

50	Titre de l'article : Penicillin Treatment of Syphilis http://jamanetwork.com/journals/jama/fullarticle/183391		PMID: 19224755
			Archive : http://archive.is/8Uckh
	Auteur principal/Année : John M. Douglas, 2009	Revue : JAMA	
Within years, widespread use of penicillin for treatment of all stages of syphilis (primary, secondary, tertiary, latent) resulted in dramatic decreases in the incidence of syphilis and associated mortality. From 1944 to 1954, rates of reported cases of syphilis of any stage decreased by more than 75% (from 368/100 000 to 83/100 000) with even greater declines in primary and secondary syphilis (from 62/100 000 to 4.5/100 000), which reflect more recent acquisition.

	Auteur principal/Année : Arturo Warman, 2003		
	P. 171-172 : In 1915 the number of the stricken was estimated at between 75,000 and 160,000. [...] The tendency for the number of those affected by pellagra to climb turned the corner during the same period. In 1940 pellagra sufferers were estimated at fewer than 50,000 and their numbers fell by half over the next five years. In the 1950s pellagra became a clinical curiosity, a disease of the past.		
52	Titre du livre : Vaccines (6 ^e édition) Publié par Elsevier Saunders https://www.elsevier.com/books/vaccines/plotkin/978-1-4557-0090-5		
	Auteur principal/Année : Stanley Plotkin, 2013		
	P. 1407 : There is little doubt that the introduction of routine tetanus toxoid vaccination in the 1940s had an impact on trends and patterns of the disease. However, because the incidence of tetanus was declining prior to widespread vaccination, as a result of decreasing exposure (fewer people in contact with soil and animal feces, which are the main reservoirs of the tetanus bacillus), and because of the widespread use of tetanus toxoid in wound management, it is difficult to assess the extent to which routine prophylactic vaccination contributed to the decline in tetanus morbidity.

	Titre de l'article : Annual summary of vital statistics: trends in the health of Americans during the 20th century	
	PMID: 11099582	
	Auteur principal/Année : Bernard Guyer, 2000	Revue : Pediatrics
	P. 10 : The major declines in child mortality that occurred in the first third of the 20th century have been attributable to a combination of improved socioeconomic conditions in this country and the public health strategies to protect the health of Americans. These public health measures included the establishment of local health departments in nearly all of the states. State and local health departments implemented these public health measures including water treatment, food safety, organized solid waste disposal, and public education about hygienic practices. These improvements in water and food safety and purity are linked to the major decline in diarrheal diseases seen in the early years of the century. Similarly, improvements in housing and decreased crowding in US cities are linked to the reductions in mortality from tuberculosis and other diseases attributable to person-to-person airborne transmission..	
55	Titre de l'article : Urban Wastewater Management in the United States: Past, Present, and Future http://www.sewerhistory.org/articles/whregion/urban_wwm_mgmt/urban_wwm_mgmt.pdf	
	Archive : https://drive.google.com/open?id=1VPeNmgPhp0L2lxxWa33zYdLHx3Mx8-fY	
	Auteur principal/Année : Steven J.Burian, 2000	Revue : Journal of Urban Technology
	P. 4 : There were fewer public sewers than private in the early nineteenth century, and most were constructed primarily for the purpose of removing storm water... Dry sewage systems and public and private sewers were commonly used in Europe and the United States, but the predominant wastewater management technology in the first half of the nineteenth century was the privy vault-cesspool system operated in a decentralized manner. Privy vaults and cesspools were basically holes in the ground, occasionally lined, constructed in cellars, beneath residences, or within close proximity to residences.	

56	Désignation abrégée : Burian 2000	Archive : https://drive.google.com/open?id=1VPeNmgPhp0L2lxxWa33zYdLHx3Mx8-fY
	<p>P. 4-5 :</p> <p>The unplanned and uncontrolled drainage of wastewater from privy vaults and cesspools contaminated soils and groundwater, and that occasionally led to contaminated drinking water and disease outbreaks.</p> <p>[...]</p> <p>Wastes accumulated till privies and cesspools overflowed and produced nuisance conditions and potential public health problems. In most cases, both lined and unlined privy vaults and cesspools proved unable to manage urban wastewater effectively during the mid-nineteenth century because the lined ones required too frequent cleaning to be cost effective over a long term, and the unlined ones contaminated groundwater and the surrounding soil.</p> <p>None of the centralized or decentralized management technologies implemented during the early nineteenth century consistently prevented contamination of nearby surface water or groundwater.</p> <p>[...]</p> <p>From 1820 to 1880, most major cities in the United States experienced considerable growth. For example, during this time Boston's population increased eightfold, New York City's tenfold, Philadelphia's thirteen fold, and Washington, D.C.'s fivefold. As a result of this increased population density in urban areas, the decentralized privy vault-cesspool wastewater management systems became overtaxed.</p>	
57	Désignation abrégée : Szreter 1988	Archive : https://drive.google.com/open?id=1c8AaRwdKf2O1On-VT0pI34G8xCEBWOIj
	<p>P. 20-21 :</p> <p>This followed a long period of extremely harmful, highly localized initiatives by the property-owning classes. They were the first to install their own water-flushing closets in large numbers from the 1770s onwards; but in the absence of a mains sewage system, these were simply allowed to empty into the nearest culvert or river, from which much of the town's population in turn took their drinking water. Unfortunately, this development was to be repeated in other cities and towns around the country in the course of the nineteenth century. The lethal lesson was only slowly learned that selective sanitation for the upper classes alone was not a sufficient panacea in the prevention of water-borne disease.</p>	
	Désignation abrégée : Burian 2000	Archive : https://drive.google.com/open?id=1VPeNmgPhp0L2lxxWa33zYdLHx3Mx8-fY
	<p>P. 6 :</p> <p>The water closet probably had the most significant effect on wastewater management compared to the other plumbing fixtures because it increased not only wastewater quantity, but also the quantity of fecal matter in discharges. The high level of fecal matter being discharged with the wastewater heightened the risk of disease transfer and outbreak, but this was not understood at the time.</p>	
58	Désignation abrégée : Burian 2000	Archive : https://drive.google.com/open?id=1VPeNmgPhp0L2lxxWa33zYdLHx3Mx8-fY
	<p>P. 8 :</p> <p>Dr. Snow recorded the location of outbreaks during the [1854] epidemic and charted the drinking water source of infected individuals. He was able to show statistically that cholera victims drew their drinking water from a sewage-contaminated part of the River Thames, while those who remained healthy drew their water from an uncontaminated part.</p>	

59	Désignation abrégée : Szreter 1988	Archive : https://drive.google.com/open?id=1c8AaRwdKf2O1On-VT0pI34G8xCEBWOIj
	<p>P. 21 :</p> <p>Sewering alone, without commensurate attention to the purity of the water supply, could prove a downright liability, as was tragically demonstrated by London's final cholera epidemic of 1866-7, immediately following the completion of London's sewers system. This was the last such epidemic and it was the famous occasion on which William Farr was able, using a method pioneered at the previous outbreak of 1853/4, to trace precisely the culprit. By dividing London into districts according to the different companies supplying water, the problem was narrowed down to the East London Waterworks Co., who were illegally supplying water from the Old Ford reservoir in Bethnal Green, which was contaminated by the recently completed West Ham sewage system.</p>	

60	Désignation abrégée : Burian 2000	Archive : https://drive.google.com/open?id=1VPeNmgPhp0L2lxxWa33zYdLHx3Mx8-fY
	<p>P. 8 :</p> <p>Prodded by public outcry... that linked sewage-polluted water with disease, Parliament passed an act in 1855 to improve the waste management of the metropolis. This act provided the foundation for the development of London's comprehensive water-carriage sewer system eventually designed by Joseph W. Bazalgette.</p>	

61-80

61	Désignation abrégée : Burian 2000	Archive : https://drive.google.com/open?id=1VPeNmgPhp0L2lxxWa33zYdLHx3Mx8-fY
	<p>P. 8 :</p> <p>In the United States, repeated cholera epidemics and other disease outbreaks gradually influenced municipalities to improve sanitation practices. Between 1832 and 1873, numerous American cities were afflicted with major outbreaks of disease, including cholera in 1832, 1849, and 1866 and typhoid in 1848. The causes of the outbreaks were attributed to a variety of reasons including unsanitary conditions and punishment from God. The experience gained from the epidemics improved the understanding of cholera and other diseases and their corresponding etiology.</p> <p>P. 14 :</p> <p>At the end of the nineteenth century, the basic techniques of urban wastewater collection were established, the sewer technologies were mostly developed, and the necessary construction materials and equipment were available. By that time, most major U.S. cities had also constructed some form of a sewer system.</p>

63	Titre de l'article : The role of public health improvements in health advances: The twentieth-century United States https://link.springer.com/article/10.1353/dem.2005.0002	
	Auteur principal/Année : David Cutler, 2005	Revue : Demography
	P. 15-16 : A striking finding is that clean water technologies appear to have reduced typhoid fever by 26% initially and by another 65% after five years, leading to its near-eradication by 1936.	

64	Désignation abrégée : McKeown 1962	Lien : https://www.jstor.org/stable/2173119
	P. 25-26 : But with this reservation there is little doubt about the main reasons for the rapid reduction of mortality from the bowel infections in the late nineteen century... We therefore conclude that the reduction of mortality attributable to the decline of bowel infection resulted from the specific measures introduced under the sanitary revolution.	
	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	P. 27 : WATER- AND FOOD-BORNE DISEASES Together, these infections accounted for about one-sixth (16-4 per cent) of the reduction in mortality from all causes (Table 4). The same diseases were responsible for about one-third of the total decline in the nineteenth century.	

65	Désignation abrégée : Szreter 1988	Archive : https://drive.google.com/open?id=1c8AaRwdKf2O1On-VT0pI34G8xCEBWOIj
	P. 18 : There can be little doubt that the first two-thirds of the nineteenth century witnessed an increasing incidence of such diseases, which was directly attributable to the unplanned proliferation of overcrowded cities and towns lacking even the most basic sanitary facilities such as proper water supply and waste disposal systems. Conversely, the ensuing disappearance of water-borne diseases in the last third of the century was due to the eventual provision of adequate sanitary facilities, long delayed but finally implemented.	

66	Titre de l'article : The Horse & the Urban Environment https://enviroliteracy.org/environment-society/transportation/the-horse-the-urban-environment/		Archive : https://drive.google.com/open?id=1Kfk5osa-wcmHc0f9R5nfynqmvChV5ug
	Auteur principal/Année : Joel Tarr, 1997		
	P. 1 : The most severe problem was that caused by horses defecating and urinating in the streets, but dead animals and noise pollution also produced serious annoyances and even health problems. The normal city horse produced between fifteen and thirty-five pounds of manure a day and about a quart of urine, usually distributed along the course of its route or deposited in the stable. While cities made sporadic attempts to keep the streets clean, the manure was everywhere, along the roadway, heaped in piles or next to stables, or ground up by the traffic and blown about by the wind.		

67	Nom de la page : Tetanus	Archive : http://archive.is/mFSuM
	Site Internet : NHS Wales http://www.nhsdirect.wales.nhs.uk/encyclopaedia/t/article/tetanus/	
	Tetanus is caused by bacteria called Clostridium tetani. These bacteria can survive for a long time outside the body, and are commonly found in soil and the manure of animals such as horses and cows.

P. 2 :

Nicolle observed that typhus patients who were admitted spread their infections to others up to the point at which they entered the hospital waiting room. Included among these secondary cases were persons who took charge of their clothing. However, patients became completely noninfectious as soon as they were bathed and dressed in a hospital uniform. They could then enter the general wards without posing a risk to others. Once Nicolle realized this, he reasoned that lice on patients' clothes were most likely the vectors.

73	Désignation abrégée : Szreter 1988	Archive : https://drive.google.com/open?id=1c8AaRwdKf2O1On-VT0pI34G8xCEBWOIj
	<p>P. 13 : Droplet-transmitted airborne diseases will spread most effectively where humans are in close and unventilated proximity with the exhalations of victims or carriers. It is most probable that overcrowded conditions of living, sleeping, and working became more prevalent as industrialization and urbanization intensified.</p>	

74	Désignation abrégée : Szreter 1988	Archive : https://drive.google.com/open?id=1c8AaRwdKf2O1On-VT0pI34G8xCEBWOIj
	<p>Szreter le mentionne dans le contexte des maladies infantiles.</p> <p>P. 31 : ... the root of the general problem of infants' vulnerability lay in the fundamentally unhygienic conditions and associated practices of the urban working-class home, virtually inevitable in small overcrowded households lacking their own water supply and water closet. Until it began to be improved from the 1890s onwards, such an environment was continuously introducing infants to bacterial organisms (in particular some strains of Escherichia coli) which, although not harmful to the more developed digestive system of elder children and adults, could produce fatal diarrhea attacks in infants.</p>	

75	Titre de l'article : Food in 19th-Century American Cities http://americanhistory.oxfordre.com/view/10.1093/acrefore/9780199329175.001.0001/acrefore-9780199329175-e-281	
	Auteur principal/Année : Cindy R. Lobel, 2016	Revue : Oxford Research Encyclopedia of American History
	P. 1 : Food provisioning was very local. Farmers, hunters, fishermen, and dairymen from a few miles away brought food by rowboats and ferryboats and by horse carts to centralized public markets within established cities. Dietary options were seasonal as well as regional.	

76	Désignation abrégée : Lobel 2016	Archive : http://americanhistory.oxfordre.com/view/10.1093/acrefore/9780199329175.001.0001/acrefore-9780199329175-e-281
	P. 11 : Before refrigeration and reliable transportation, perishable foods were scant in the diet of most urbanites. Even the wealthiest were accustomed to eating spoiled or rancid food or forgoing fresh produce in the colder months.	
	P. 6 : The summer months were most abundant and diverse, with stone fruits, berries, apples, tomatoes, watermelons, lettuces, and other warm-weather produce crowding the tables under the market-house roofs. Food also spoiled quickest in these months, and observers noted the rapidity with which meat spoiled and vegetables wilted.	
	P. 12 : As for fresh vegetables, they were not commonly consumed in the 1800s, though the diet expanded to incorporate them by the second half of the century... Fruits also were more commonly eaten in stewed and dessert forms rather than fresh.	

77	Désignation abrégée : McKeown 1975	Lien : http://www.jstor.org/stable/2173935
	P. 25 : Epidemiological evidence suggests that nutrition plays an important part in the individual's reaction to measles. In this country, until recently, infection rates were high and approximately the same in all social classes; but mortality rates were much greater among the poor than among the well-to-do. Similarly, in developing countries to-day, there is little doubt that the devastating effects of measles are associated with low living standards. The explanation accepted by most epidemiologists with extensive experience of measles is that although infection rates are largely independent of social circumstances, the mortality which results from the infection is determined mainly by nutritional state.	

78	Désignation abrégée : Lobel 2016	Archive : http://americanhistory.oxfordre.com/view/10.1093/acrefore/9780199329175.001.0001/acrefore-9780199329175-e-281
	<p>P. 2 : A host of technological developments—from canal and railroad building to the manufacturing of ice and the creation of refrigerated railcars—indelibly altered urban American foodways during the 19th century. The most crucial of these developments involved new forms of transportation that eased and cheapened the carriage of foodstuffs from rural to urban areas.</p> <p>P. 3 : The new transportation networks also improved the quality of food entering American cities... Foods that previously had perished during travel along rudimentary roads now endured long distances without spoiling. Railroads carried milk from rural areas to far-off cities, oysters from New York City to Buffalo, wild game from Iowa to Baltimore, salmon from Maine to Philadelphia, even lobster from the East Coast to Chicago.</p>	

79	Désignation abrégée : Lobel 2016	Archive : http://americanhistory.oxfordre.com/view/10.1093/acrefore/9780199329175.001.0001/acrefore-9780199329175-e-281
	<p>P. 3 : Technologies related directly to food storage, preservation, and processing also contributed to the transformation of urban food habits. Among the most important were those involved in the commercial production and storage of ice.</p>	

80	Désignation abrégée : Lobel 2016	Archive : http://americanhistory.oxfordre.com/view/10.1093/acrefore/9780199329175.001.0001/acrefore-9780199329175-e-281
	<p>P. 4 : Food-safety issues arose periodically over the course of the 19th century because of the absence of any regulation of large conglomerates or small, food-related businesses. The milk supply was of particular concern, as distilleries in places like New York, Chicago, and Cincinnati paired with dairies within the city limits.</p>

	Site Internet : Vaccines.gov https://www.vaccines.gov/more_info/features/five-important-reasons-to-vaccinate-your-child.html		
	Because of advances in medical science, your child can be protected against more diseases than ever before. Some diseases that once injured or killed thousands of children, have been eliminated completely and others are close to extinction – primarily due to safe and effective vaccines.

	Site Internet : MedicineNet.com http://www.medicinenet.com/script/main/art.asp?articlekey=33490		
	Chronic disease: A disease that persists for a long time. A chronic disease is one lasting 3 months or more, by the definition of the U.S. National Center for Health Statistics. Chronic diseases generally cannot be prevented by vaccines or cured by medication, nor do they just disappear.

	Auteur principal/Année : Paul W. Newacheck, 1992	Revue : American Journal of Public Health	
Pour une raison quelconque, le chiffre du nombre d'enfants ayant un problème chronique qui les limite dans les activités quotidiennes n'apparaît pas dans l'article. Cependant, il peut être calculé à partir du chiffre indiquant que 31 % des enfants ont un problème chronique quelconque (p. 4, tableau 2), dont 13,3 % avec une limitation dans les activités quotidiennes (p. 5, tableau 5). Le taux de 4,1 % est une sous-estimation (par rapport à l'enquête de 1981), car l'enquête de 1988 ne comprenait pas les problèmes mentaux (p. 2).

		Archive : http://archive.is/WH2zR
	Site Internet : Israel Today http://www.israelhayom.co.il/article/432489	
114	A step forward in integrating children with food allergies into the education system: A circular issued by the director general of the Ministry of Education this week defines that any class in which an allergic student studies will be declared a 'safe environment', to which the allergenic food component will be banned. In other classrooms, safety precautions will be taken, such as cleaning tables with wipes, to protect allergic students. The circular also defines that schools will also have alternative areas where it will be possible to eat food products that contain allergens, for the benefit of other students. [...] It is estimated that in Israel there are about 15,000 children in the education system who suffer from allergies of various severity levels. About 2,600 children in first and second grades are assisted by personal assistants, but after this age the assistance is ceased.

	In response to cases of swine influenza A(H1N1), reported in Mexico and the United States of America, the Director-General convened a meeting of the Emergency Committee to assess the situation and advise her on appropriate responses... The Committee nevertheless agreed that the current situation constitutes a public health emergency of international concern. Based on this advice, the Director-General has determined that the current events constitute a public health emergency of international concern, under the Regulations.		

121-125

121	Titre de l'article : CDC: Measles Outbreak a 'Wake-Up Call'		Date : 29 janvier 2015
			Archive : http://archive.is/5sLoj
	Site Internet : Medpagetoday http://www.medpagetoday.com/primarycare/vaccines/49786		
Anne Schuchat, MD, director of the CDC's National Center for Immunization and Respiratory Diseases, told reporters on a conference call that 84 people in 14 states have been diagnosed with measles so far in 2015 and, of them, 67 are linked to the Disneyland outbreak [...] The Disneyland-centered outbreak is "a wake-up call" for Americans to be vaccinated so that future imported cases don't spread.			

122	Titre de l'article : The Rise In Chronic Conditions Among Infants, Children, And Youth Can Be Met With Continued Health System Innovations https://www.healthaffairs.org/doi/pdf/10.1377/hlthaff.2014.0832		PMID: 25489027
	Archive : https://drive.google.com/open?id=199bLfWqYYf0JFd2QRXSMhBU9nQFUH2C2		
	Auteur principal/Année : James M. Perrin, 2014	Revue : Health Affairs	
P. 4 : What has caused such substantial growth in common conditions in recent decades? Increasingly, evidence points to genetic bases for these conditions, but genetic drift—changes in the gene pool of reproductive-age adolescents and young adults—alone cannot explain this rapid growth.			

123	Titre de l'article : The rise of childhood type 1 diabetes in the 20th century		PMID: 12453886
	Auteur principal/Année : Edwin A.M. Gale, 2002	Revue : Diabetes	
	P. 1 : A rapid change in incidence within a genetically stable population implies that nongenetic factors are active and that the influence of genes is relative to population, time, and place. It suggests that something has changed in the environment our children encounter or in the way they are treated.		

124	Désignation abrégée : Perrin 2014	Archive : https://drive.google.com/open?id=199bLfWqYYf0JFd2QRXSMhBU9nQFUH2C2
	P. 4 : Additionally, growing public awareness of these conditions coupled with advances in screening in health care and school settings may identify mildly affected children who in previous years may have gone undiagnosed, accounting for some of the rapid increase in overall prevalence.	

125	Désignation abrégée : Perrin 2014	Archive : https://drive.google.com/open?id=199bLfWqYYf0JFd2QRXSMhBU9nQFUH2C2
	P. 3 : However, premature infants of higher birthweight experience much less longterm morbidity than in years past, and the absolute numbers of extremely low-birthweight infants are small (less than 1 percent of all births). Advances in prenatal and newborn screening for genetic and infectious conditions have also prevented a significant proportion of intellectual disabilities.	

Chapitre 9 : L'immunité de groupe

1-20

1	Titre du livre : Vaccines (6 ^e édition) Publié par Elsevier Saunders https://www.elsevier.com/books/vaccines/plotkin/978-1-4557-0090-5
	Auteur principal/Année : Stanley Plotkin, 2013
	P. 1395 : ...the concept of herd immunity... refers to the prevalence or proportion of immune persons in a population... which, if achieved, should lead to the elimination of an infection from a population.
2	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	Auteur principal/Année : Stanley Plotkin, 2013
	P. 1395 : herd immunity, a term that refers to... indirect protection of nonimmune persons, attributable to the presence and proximity of immune persons.
3	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	Auteur principal/Année : Stanley Plotkin, 2013
	P. 1396 : if an infection or vaccine induces some degree of immunity against infection, then some nonimmune people will be protected indirectly, by the presence and proximity of immune persons, and transmission should stop in a population prior to the infection of all susceptible individuals.
4	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	Par exemple, l'exposition au virus de la rougeole entraîne une immunité à vie. P. 1403 : One of the remarkable observations about measles is that immunity induced by natural infection appears to remain strong for life: thus, Panum observed that individuals exposed to measles in 1781 in the Faroe Islands were still immune when the virus was next introduced, 65 years later, in 1846.

5	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	Par exemple, l'immunité contre la bactérie Hib, p. 1406 : The absence of disease in the neonatal period is a result of maternal antibody, passed to the infant either transplacentally or via breast milk. As infant antibody levels fall, susceptibility rises...	
6	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1397-1398	
7	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1406 : If a vaccine were to protect only against disease, and not at all against infection, then it would have no influence on infection transmission in the community and there would be no indirect protection (vaccination of one person would have no influence on any others in the community). It would be possible to reduce disease with such a vaccine but not to eradicate the infection.	
8	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 748 : The most common source of environmental exposure to <i>C. tetani</i> bacilli and spores is soil, where the organism is widely but variably distributed.	
9	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 756 : Immunization histories were reported for 986 (49%) of the tetanus cases reported from 1972 to 2009 (Centers for Disease Control and Prevention, unpublished data). Of those 986 cases, 163 (16%) had received at least a three-dose primary series of tetanus toxoid before onset of tetanus; 62 (6%) reported that the last dose of tetanus toxoid was received less than 10 years before the illness.	
10	Nom de la page : Notifiable diseases: historic annual totals	
	Site Internet : GOV.UK https://www.gov.uk/government/publications/notifiable-diseases-historic-annual-totals	
	For example, in the UK, an average of 5 cases of tetanus were recorded each year in 2001-2015. Official UK (England-Wales) morbidity data on the UK Ministry of Health website.	
	Titre du document : Infectious diseases requiring notification in Israel	Archive : https://drive.google.com/open?id=1QEXa9ZV_xDKvAdsUhN4ByWAfc7FbMjsH
	Auteur/Année : Israeli Ministry of Health, 2012	
	P. 56 : In Israel, less than one case per year was recorded between 1990-2010.	

11	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 1396 : The focal point of much of the theoretical work on community immunity has been the recognition that, if an infection or vaccine induces some degree of immunity against infection, then some nonimmune people will be protected indirectly, by the presence and proximity of immune persons, and transmission should stop in a population prior to the infection of all susceptible individuals.

12	Titre de l'article : Immunity for the People: The Challenge of Achieving High Vaccine Coverage in American History https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1820430/pdf/phr122000248.pdf		PMID: 17357368
			Archive : https://drive.google.com/open?id=1jQB7kYQeKFIBJCukM7Cv8ekpOELQJwiT
	Auteur principal/Année : James Colgrove, 2007	Revue : Public Health Reports	
P. 1 : [vaccination], unlike other health interventions that benefit the individual, also carries a societal benefit through the herd immunity it creates. Thus, some observers have analogized immunization to public health responsibilities such as providing clean water or sewage disposal that are not left to the free market.			

13	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 1395 : The social benefits of such indirect protection have important policy implications, including provision of a rationale for mandating immunization.

14	Titre de l'article : Immunity for the People: The Challenge of Achieving High Vaccine Coverage in American History https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1820430/pdf/phr122000248.pdf		PMID: 17357368
			Archive : https://drive.google.com/open?id=1jQB7kYQeKFIBJCukM7Cv8ekpOELQJwiT
	Auteur principal/Année : James Colgrove, 2007	Revue : Public Health Reports	
P. 1 : It is a widely accepted tenet of public health practice that persuasive approaches are preferable to coercive ones whenever possible. But because the failure to immunize oneself or one's children can contribute to the spread of infectious diseases, the United States has invoked compulsory measures, primarily laws requiring immunization before children may enter school.

	Auteur principal/Année : Steven Black, 2000	Revue : Pediatric Infectious Disease Journal
	<p>P. 5 : Overall 513 pneumococcal vaccine recipients and 579 controls were hospitalized within 60 days of receipt of a dose of vaccine. [...] Review of emergency room visits within 30 days of vaccination revealed 1188 visits in pneumococcal vaccine recipients and 1169 visits in controls.</p>	

18	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	<p>P. 1396 : The focal point of much of the theoretical work on community immunity has been the recognition that, if an infection or vaccine induces some degree of immunity against infection, then some nonimmune people will be protected indirectly, by the presence and proximity of immune persons, and transmission should stop in a population prior to the infection of all susceptible individuals. This insight encourages the estimation of threshold numbers or proportions of immune persons necessary for this cessation to occur.</p>	

19	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	<p>P. 400 : The elegant theory just summarized is built on extreme assumptions: that all individuals mix at random, that individuals are either fully susceptible or fully immune, and that the population is uniform (ie, that all individuals behave the same way and all infected individuals are equally infectious). These assumptions are unlikely to hold for any infection in any human population.</p>	

20	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1401	

21-40

21	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	<p>P. 1403 : Published estimates of herd immunity thresholds required to eradicate measles have ranged from 55% to 96%, depending on the modeling approach and the assumptions employed (eg, whether age or seasonality of transmission was included). The logic and the flaws underlying the various estimates have been discussed elsewhere.</p>	

22	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	<p>P. 1405 : Published estimates of a crude herd immunity threshold for diphtheria have ranged from 50% to 90%.</p>	

23	<p>Désignation abrégée : Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 1404 : Several investigations have concluded that, for the incidence of CRS to decrease in the long term, the minimal vaccination coverage that must be achieved and maintained in young children of both sexes is in the region of 50% to 80%.</p>
24	<p>Désignation abrégée : Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 1411 : The herd immunity threshold concept provides an epidemiologic attribute with which to characterize particular infections. Although precision may not be possible because of population heterogeneities or because of variability in the immune status of individuals—the crude thresholds are naively optimistic in practice—even crude estimates can be of use in giving a rough guideline for predicting the impact of a vaccination program and at least a hint as to the potential for eradication.</p>
25	<p>Désignation abrégée : Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 1402 : If a vaccine were to protect only against disease, and not at all against infection, then it would have no influence on infection transmission in the community and there would be no indirect protection (vaccination of one person would have no influence on any others in the community). It would be possible to reduce disease with such a vaccine but not to eradicate the infection.</p>
26	<p>Désignation abrégée : Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 746 : Tetanus is unique among vaccine-preventable diseases in that it is not communicable. <i>Clostridium tetani</i>, the causative agent of tetanus, is widespread in the environment; many animals in addition to humans can harbor and excrete the organism and its spores. When spores of <i>C. tetani</i> are introduced into the anaerobic conditions found in devitalized tissue or punctures, they germinate to vegetative bacilli that elaborate toxin. The clinical presentation results from the actions of this toxin on the central nervous system (CNS). Many animal species besides humans are susceptible to the disease.</p>
27	<p>Désignation abrégée : Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 752-754 : A decline in tetanus incidence in industrialized countries began in the early 1900s. By the mid-1930s, many European countries had tetanus mortality rates of less than 1 per 100,000. Factors that contributed to the decline included urbanization, mechanization of agriculture, adoption of aseptic surgical and medical techniques, hygienic childbirth and wound care practices, use of prophylactic tetanus antitoxin, and, ultimately, use of antibiotics. [...] Historically, tetanus was a dreaded consequence of war, with incidence rates on the order of two cases per 1,000 injured troops; [...] In 1947, when national reporting began, the incidence of reported cases was 0.39 per 100,000.</p>

28	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1407 : Clostridium tetani is not communicable between human hosts, and thus vaccination cannot lead to indirect protection in the sense implied in many definitions of herd immunity. Certainly there is no threshold proportion of immune persons, below 100%, that can ensure total absence of tetanus from a community.	
29	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1407 : It appears that wild-type polioviruses ceased to circulate in most of the United States by 1970, at which time only some 65% of children were receiving a complete course of OPV. However, given the complex history of previous IPV and then OPV programs in the country, and the propensity of OPV—let alone wild—viruses to circulate in the community, the actual level of immunity in the population at that time is unknown. It is also possible that the disappearance of wild-type polioviruses from the United States and other countries employing OPV has resulted not only from the achievement of some herd immunity threshold, but also from the competition for ecologic space between the wild-type viruses and the constantly introduced vaccine strains.	
30	Titre de l'article : Epidemiology Of Poliomyelitis And Allied Diseases--1963 https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2604573/pdf/yjbm00599-0011.pdf	PMID: 14064722
	Auteur principal/Année : Dorothy M. Horstmann, 1963	Archive : https://drive.google.com/open?id=1fV_w03BSORQKex-hR7DkGZH44EXUwpTv
	Revue : Yale Journal of Biology and Medicine	
31	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1407 : ...there is good epidemiologic evidence for indirect protection by IPV's. Countries that have used only IPV (eg, Sweden, Finland, and the Netherlands) experienced elimination of circulating wild-type polioviruses for long periods of time.	

32	Titre du document : Polio - The Beginning Of The End	
	Auteur/Année : WHO, 1997	Archive : https://drive.google.com/open?id=1r0R4dISUiB6jOtNta-FvrKDD-gFlzW9h
	P. 20 : Inactivated polio vaccine (IPV) works by producing protective antibodies in the blood—thus preventing the spread of poliovirus to the central nervous system. However, it induces only very low- level immunity to poliovirus inside the gut. As a result, it provides individual protection against polio paralysis but only marginally reduces the spread of wild poliovirus. In a person immunized with IPV, wild virus can still multiply inside the intestines and be shed in stools. Because of this, IPV could not be used to eradicate polio.	
33	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 631 : Continued use of OPV will induce effective intestinal immunity, thereby enhancing community resistance to transmission of imported wild poliovirus.	
34	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1407 : ...live poliovirus vaccine virus is excreted in the feces and by the oropharynx in sufficient quantities for it to be transmitted to contacts. This unique attribute of OPV provides a special mechanism for indirect protection of non-vaccinees—in effect by vaccinating them surreptitiously.

	Auteur principal/Année : Christopher Gill, 2017		Revue : F1000 Research
P. 11 : Fundamental aspects of pertussis epidemiology and immunology were left unexplained following the introduction of wP vaccines in the 1950s. The wP vaccines worked: disease rates plummeted, mortality fell, and the pertussis problem appeared largely solved. The fact that we did not know then, and still do not know now, how wP vaccines did this was inconvenient and has remained problematic in the aP vaccine era, since it created no clear			

	immunologic surrogate by which to bridge these vaccine classes. Had carriage studies been conducted in parallel with wP introductions, then this might have provided supportive evidence that infections were being blocked. But carriage studies were not done. Rather, it was assumed that because wP vaccines appeared to confer herd immunity, they therefore blocked carriage.

	Second, make sure everyone around the baby is up-to-date with their pertussis vaccines. This includes parents, siblings, grandparents (including those 65 years and older), other family members, babysitters, etc. They should be up-to-date with the age-appropriate vaccine (DTaP or Tdap) at least two weeks before coming into close contact with the baby. [...] Q: Doesn't herd immunity protect most people?	

	A: [...] Since pertussis spreads so easily, vaccine protection decreases over time, and acellular pertussis vaccines may not prevent colonization (carrying the bacteria in your body without getting sick) or spread of the bacteria, we can't rely on herd immunity to protect people from pertussis.

	Auteur principal/Année : Louis W. Miller, 1972	Revue : The American Journal Of Diseases Of Children	
	P. 3 : When diphtheria toxoid became available, it was generally believed that it induced immunity that protected individuals from symptomatic illness but not from asymptomatic infection. This was based on the observation that immunity is related to the neutralization of toxin elaborated by C diphtheriae and not interference with diphtheria infection.		
	Titre de l'article : Diphtheria in the United States, 1971-81 https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1646466/pdf/amjph00288-0037.pdf		PMID: 4061710
			Archive : https://drive.google.com/open?id=1Xxx6iNJSFo6djyLNV7QV7pQDM521PDe
	Auteur principal/Année : Robert T. Chen, 1985	Revue : American Journal of Public Health	
	P. 4 : However, immunization with diphtheria toxoid is protective only against the phage-mediated toxin, and not against infection by the C. diphtheriae organism. Thus immunized persons have less severe disease when infected, but may remain important as asymptomatic carriers in the transmission of disease.		

71	Désignation abrégée : Miller 1972
	P. 3 : In 1936, Frost et al alluded to a paucity of observations on record concerning antitoxic immunity and the carrier state. Nonetheless, he stated that the limited data suggested that there is little, if any, difference between those individuals with and those without antitoxic immunity in their risk of becoming infected. [...] The findings in Elgin corroborate the assumptions of Frost et al and show that there is no difference in the risk of diphtheria acquisition among those with full, lapsed, inadequate, and no immunizations.

72	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 1406 : Given that diphtheria toxin is not a constituent of Corynebacterium diphtheriae per se, but exists as a consequence of bacteriophage infection, the immunity induced by toxoid vaccination may not provide protection against infection at all. However, toxoid vaccines do protect against toxin mediated disease, and transmission of the diphtheria bacillus is more efficient from clinical patients than from subclinical carriers - thus the toxoid vaccines may protect against infectiousness and infection transmission, but not (or more than) against infection receipt... This may have been an important contributor to the disappearance of diphtheria in vaccinated populations.

73	Titre de l'article : The Epidemiological Importance Of Diphtheria Carriers https://academic.oup.com/aje/article-abstract/5/4/508/149362?redirectedFrom=fulltext	
	Auteur principal/Année : James A. Doull, 1925	Revue : American Journal of Epidemiology

	<p>P. 20 :</p> <p>After making necessary allowance for differences in age-distribution of the two groups of contacts, it is a conservative estimate to state that the risk of attack is ten times as great for family contacts of cases as for those in similar association with known bacillus carriers.</p>
74	<p>Désignation abrégée : Doull 1925</p> <p>P. 1 :</p> <p>...and as carriers are much more numerous than clinically recognizable cases, and are for the most part subject to no restriction of their intercourse with the general public, it is reasonable to infer that they may be, in the aggregate, the most frequent sources of clinical infection.</p>
75	<p>Désignation abrégée : Doull 1925</p> <p>P. 2 :</p> <p>A similar conclusion is indicated by the results of attempts to trace the sources of infection of recognized cases. For example, in a study of some 500 cases reported in a limited section of Baltimore, investigators from this school have been able to find evidence of prior association with recognized or even suspected cases of clinical diphtheria in only about 20 per cent, of the cases investigated. Making all due allowance for the imperfections of such an investigation, it still appears that a large proportion of the cases investigated must have contracted their infections from unrecognized clinical cases or from carriers.</p>
76	<p>Désignation abrégée : Doull 1925</p> <p>P. 20 :</p> <p>It seems impossible to explain the general distribution of diphtheria and the usual absence of traceable lines of contact from clinical cases on any other hypothesis except that infection is spread largely by carriers.</p>
77	<p>Désignation abrégée : Miller 1972</p> <p>P. 2 :</p> <p>Throat cultures were done on 306 children and staff; toxigenic C diphtheriae, gravis type, was isolated from 104 (34%). Fifteen of these (14%) were cases, and 89 (86%) were carriers. There was no statistical difference in the risk of diphtheria infection among those with full, lapsed, inadequate, or no previous diphtheria immunization.</p>
78	<p>Désignation abrégée : Miller 1972</p> <p>P. 3 :</p> <p>Recent epidemics in Austin and Elgin Texas, provided ample evidence that carriers continue to play a very important role in the transmission of diphtheria.</p>
79	<p>Désignation abrégée : Miller 1972</p> <p>P. 3 :</p> <p>However, diphtheria outbreaks have been described in populations with as much as 94% of the people being previously immunized. These outbreaks, the known importance of carriers in the spread of diphtheria, and the demonstrated failure of toxoid to prevent the carrier state</p>

	lead us to conclude that the concept of herd immunity is not applicable in the prevention of diphtheria	
	Titre de l'article : The Austin, Texas, Diphtheria Outbreak Clinical and Epidemiological Aspects	PMID: 4984784
	Auteur principal/Année : Victor M. Zalma, 1970	Revue : JAMA
	<p>Une conclusion similaire a été tirée par Zalma et ses collègues, également du CDC, qui ont enquêté sur l'épidémie à Austin (Texas).</p> <p>P. 5 : Although toxoid reduces the severity of disease caused by toxigenic organisms, it does not eradicate such organisms and, hence, as long as there are susceptibles in an area where C diphtheriae exists, cases can continue to occur.</p>	

80	Titre de l'article : Diphtheria in the Russian Federation in the 1990s	PMID: 10657187
	Auteur principal/Année : Svetlana S. Markina, 2000	Revue : Journal of Infectious Diseases
	<p>P. 7 : The Soviet and Russian experience has been that of persistent circulation of toxigenic strains of C. diphtheriae and at least two resurgences of diphtheria despite fairly high levels of vaccine coverage among most childhood age groups. Studies in 1969–1970 documented that reintroduction of toxigenic strains into schools with 100% coverage of children produced widespread transmission of the organism for months despite an absence of cases. A study in several oblasts in 1980–1981 found low-level circulation of toxigenic strains despite immunity in >97% of 20,000 children who were 4–14 years of age, as measured by Schick testing. While inadequate implementation of immunization played a role in permitting circulation of diphtheria organisms to continue, the experience in Russia and elsewhere suggests that circulation is likely to persist in areas of lesser economic development even with good overall immunization levels.</p>	

81-100

81	Désignation abrégée : Chen 1985
	<p>P. 3 : The decline in diphtheria incidence in the United States during 1971-81 occurred despite serologic studies during the 1970s showing subprotective serum diphtheria antitoxin levels in approximately 25 per cent of the children and 75 per cent of the adults tested in three US cities.</p>
	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	<p>P. 165 : Despite the relatively low levels of immunity among adults in many countries, diphtheria has remained well controlled in most countries with effective childhood immunization programs... Serologic studies in Europe and the United States have demonstrated that many adults in these countries remain susceptible to diphtheria.</p>

82	Désignation abrégée : Chen 1985		
	P. 3 : The frequency of diphtheria carriage in the United States is not known accurately.		
83	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)		
	P. 1405 : Estimates aside, the proportion of the population actually immune to diphtheria today is elusive. Vaccine coverage is difficult to define because it has varied over time, and because at least three doses are recommended, although one or two provide some protection.		
84	Titre de l'article : Penicillin In Treatment Of Diphtheria And Diphtheria Carriers		PMID: 20280343
	Auteur principal/Année : Samuel Karelitz, 1947	Revue : The Journal Of Pediatrics	
	P. 10 : Penicillin was ineffective in preventing toxic complications of diphtheria, but seemed to hasten the clearing and further the development of complications due to pyogenic organisms. Penicillin should not be used as a substitute for diphtheria antitoxin.		
85	Désignation abrégée : Karelitz 1947		
	P. 10 : Patients with faucial diphtheria treated with antitoxin and penicillin... were rendered diphtheria negative more rapidly than were the patients who received antitoxin and no penicillin. Carriers of virulent C. diphtheria were likewise rendered free of the bacteria by treatment with penicillin.		
86	Désignation abrégée : Zalma 1970		
	P. 4 : Fourteen of 142 treated carriers (9.9%) were not cleared of C diphtheriae after treatment with procaine penicillin, administered intramuscularly, 600,000 to 2,000,000 units a day for seven to ten days, and most were given a course of erythromycin, which eradicated the organism in every patient.		
	Désignation abrégée : Miller 1972		
	P. 3 : At the first appearance of a diphtheria case, control activities should be directed toward identifying, isolating, and treating carriers, as well as toward immunizing persons with less than full immunization status. This dual approach will reduce or eliminate the spread of infection by reducing the number of carriers, and it will reduce the number of cases by improving the immunization status of exposed individuals.		
87	Titre du document : CDC Pink Book - Diphtheria https://drive.google.com/file/d/1RHDvQU2YyPDflcv-qjEC9LPBMM22GEwo/view?usp=sharing		Auteur/Année : CDC, 2011
	P. 78-79		

	<p>Persons with suspected diphtheria should be given antibiotics and antitoxin in adequate dosage and placed in isolation after the provisional clinical diagnosis is made and appropriate cultures are obtained.</p> <p>[...]</p> <p>The disease is usually not contagious 48 hours after antibiotics are instituted. Elimination of the organism should be documented by two consecutive negative cultures after therapy is completed.</p>
--	--

88	<p>Désignation abrégée : Chen 1985</p>
	<p>P. 4 : The Rumanian experience lends support for this hypothesis; improved immunization led to a sharp decline in diphtheria morbidity disproportionate to the actual number of persons with Schick-proven immunity, and surveillance cultures in epidemic and nonepidemic communities showed a concomitant drop in the percentage of toxigenic strains from 86 per cent in 1955-66 to 5 per cent in 1977.</p>

	P. 264 : After a single natural infection, 38% of children are protected against any subsequent rotavirus infection, 77% are protected against rotavirus diarrhea, and 87% are protected against severe diarrhea. Reinfection can occur at any age. [...] The first infection after 3 months of age is generally the most severe. P. 270 : In addition, infants may experience multiple episodes of rotavirus diarrhea because the initial infection may provide only partial immunity.	
135	Titre du document : CDC Pink Book – Rotavirus https://drive.google.com/file/d/17oSPucPglFR3-n79hEokf30r1Rtr4-PT/view?usp=sharing	Auteur/Année : CDC, 2011
	P. 266 :	

	Rotavirus infection is not nationally notifiable in the United States. Estimates of incidence and disease burden are based on special surveys, cohort studies, and hospital discharge data. In the prevaccine era an estimated 3 million rotavirus infections occurred every year in the United States and 95% of children experienced at least one rotavirus infection by age 5 years. The incidence of rotavirus is similar in developed and developing countries, suggesting that improved sanitation alone is not sufficient to prevent the infection.

	Auteur principal/Année : Mark Jit, 2007	Revue : Human Vaccines
	P. 5 : The two methods we used gave similarly low figures of 3.3 and 3.2 deaths a year. Hence, our analysis predicts that the annual mortality burden for rotavirus in England and Wales is extremely low. Also, these estimates do not accurately capture the mortality attributable to rotavirus alone as in almost all cases of death due to rotavirus there are other contributing causes. This suggests that universal rotavirus vaccination will have a limited impact on childhood mortality in the United Kingdom.	

138	Nom de la page (traduit de l'hébreu) : Rotavirus	Archive : http://archive.is/lpSxT
	Site Internet : Israeli Ministry of Health https://www.health.gov.il/Subjects/pregnancy/Childbirth/Vaccination_of_infants/Pages/Rota_Virus.aspx	
	The history of the disease in Israel Before the vaccine existed, the virus caused 4,400 hospitalizations of children a year in Israel. Death from this virus is common in developing countries and very rare in developed countries and in Israel.	

139	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 686 :	

	Several countries that have introduced rotavirus vaccines in their national childhood immunization programs have already seen remarkable declines in severe rotavirus gastroenteritis after vaccine introduction.

141	Titre de l'article : Rotavirus vaccination and herd immunity: an evidence-based review https://www.dovepress.com/rotavirus-vaccination-and-herd-immunity-an-evidence-based-review-peer-reviewed-article-PHMT	
	Auteur principal/Année : Lorna M Seybolt, 2012	Revue : Pediatric Health, Medicine and Therapeutics
	P. 3 : A peculiarity of rotavirus natural infection, however, is that while it protects against subsequent clinical infection it does not prevent subclinical reinfection and virus circulation – a phenomenon consistently shown in cohorts of neonates, young children, and adults. A vaccine would not be expected to perform better than natural infection. P. 4 : As this was only an isolated finding, the authoritative conclusion remained that rotavirus vaccines, despite being efficacious, would not be expected to significantly decrease the circulation of rotaviruses.	
	Titre de l'article : Correlates of protection for rotavirus vaccines: Possible alternative trial endpoints, opportunities, and challenges https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4514048/pdf/khvi-10-12-977728.pdf	
	PMID: 25483685 Archive : https://drive.google.com/open?id=13USFrSUT1_LA2Fd5SYjaSi8n6PmT9sSH	
	Auteur principal/Année : Juana Angel, 2014	Revue : Human Vaccines & Immunotherapeutics
	P. 1 : Natural RV infection does not generate sterilizing immunity, thus, reasonable goals of vaccination are to decrease or eliminate severe disease in children, but not to prevent infection.	

142	Désignation abrégée : Seybolt 2012
	P. 1 : Herd immunity – the indirect protection of unimmunized individuals as a result of others being immunized – was not expected to be a benefit of rotavirus vaccination programs since the vaccines were thought to reduce severe disease but not to decrease virus transmission significantly. Postlicensure studies, however, have suggested that this

	assumption may need reassessment. Studies in a variety of settings have shown evidence of greater than expected declines in rotavirus disease.
--	--

143	Désignation abrégée : Seybolt 2012
	P. 11 : Yet, it seems highly compelling that many studies in different countries, under different conditions, and using different surveillance systems have consistently found some evidence of herd immunity with similar results for both vaccines. If a real phenomenon, it may be explained by decreased circulation of rotavirus, a fact that was suggested by one prelicensure study but has not been evaluated postlicensure. An alternative explanation is transmission of the vaccine virus from immunized infants to those unimmunized resulting in secondary immunization, as in the case of oral poliovirus vaccine.

144	Désignation abrégée : Seybolt 2012
	P. 11 : The evidence regarding herd immunity associated with rotavirus vaccines is of poor quality because this effect was not anticipated and studies were not specifically designed to detect it. [...] Studies used time series with short before and/or after observation periods, a situation vulnerable to temporal changes in rotavirus activity. Also, vaccine coverage was either unknown or inferred from external sources, which may or may not have been applicable to the study group. P. 5 : For all these reasons, every study reviewed has significant potential flaws in relation to herd immunity and thus should be interpreted with caution and in conjunction with other available data.

	Auteur principal/Année : Matthew R Moore, 2015	Revue : European Respiratory Journal	
<p>P. 7 :</p> <p>Our analysis shows there were substantial and rapid reductions in IPD within 3 years of the introduction of PCV13 in the USA. The serotypes most affected were those most common before introduction of PCV13, particularly serotypes 19A and 7F. Also, the age groups that experienced the earliest reductions in PCV13 minus PCV7 type IPD were those targeted for vaccination: children younger than 5 years.</p> <p>[...]</p> <p>We found a reduction in IPD in adults associated with introduction of PCV13 in children. In all adult age groups, PCV13 minus PCV7 type IPD (especially serotypes 19A and 7F) declined by 58–72%, which is comparable with that reported early after the introduction of PCV7, leading to overall reductions in IPD of 12–32%. These findings are consistent with the hypothesis that PCV13 prevents nasopharyngeal colonisation with serotypes 19A and 7F among children and, therefore, prevents transmission of these types between children and adults.</p>

	P. 862 : From the health care payer perspective, most studies have shown that universal childhood vaccination programs will not provide savings at the current price of the vaccine.

199	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 1405 : Beyond this, the long-term risk of zoster associated with vaccine strains is still not clear. The situation will need close monitoring in the coming years to ensure an overall public health benefit from this intervention. As a consequence of this uncertainty, several countries (eg, the United Kingdom) still prefer to use varicella vaccine selectively—for example, in high-risk patients and health-care workers - although these policies may change if the US policy proves successful and cost effective in the long term.

203	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	<p>L'ouvrage <i>Vaccines</i> (Plotkin 2013, p. 694) fixe le niveau de morbidité du syndrome de rubéole congénitale (SRC) à 4-8 cas pour 10 000 naissances :</p> <p>After that outbreak, CRS rates fell to 4 to 8 per 10,000 pregnancies until 1970, when the first vaccines were licensed.</p> <p>Ce taux élevé est incompatible avec les données de morbidité du SRC aux États-Unis au cours de ces années, comme cela apparaît dans le Pink Book du CDC (p. 5 [279]) et dans le graphique présenté dans le livre <i>Vaccines</i> lui-même (p. 712). Ces graphiques montrent qu'en 1969-70, environ 65-67 cas de SRC ont été signalés aux États-Unis, alors que le taux de natalité était d'environ 3,7 millions de naissances par an.</p>

204	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	En Suède, la vaccination contre la rubéole a commencé en 1982. P. 712 : Before 1974, a yearly average of 14 CRS cases was recorded in Sweden; there were 2 cases per year between 1975 and 1985, and there have been no cases since 1985.	
205	Titre du document : Infectious diseases requiring notification in Israel https://www.health.gov.il/PublicationsFiles/Disease1951_2010.pdf	Archive : https://drive.google.com/open?id=1QEXa9ZV_xDKvAdsUhN4ByWAfc7FbMjsH
	Auteur/Année : Israeli Ministry of Health, 2012	
206	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 700 : The protective efficacy of rubella vaccination has been assessed (1) by observation of vaccinees and control subjects during natural epidemics and (2) by intranasal challenge of vaccinated volunteers with unattenuated or attenuated viruses. No double-blind efficacy study has been done, but there is much evidence for effectiveness.	
207	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 711 : Rubella vaccine has had spectacular success in the United States, in terms of the number of persons vaccinated and the declining numbers of rubella cases reported. Since the licensing of the vaccine in 1969, no major epidemic of rubella has occurred, despite the previously observed 6 to 9 year cycle.	
208	Titre du document : CDC Pink Book – Rubella https://drive.google.com/file/d/11JSySikEL9HODpfuTATaiJQwWXIIwJyK/view?usp=sharing	Auteur/Année : CDC, 2011
	P. 281 : Follow-up studies indicate that one dose of vaccine confers long-term, probably lifelong, protection.	
209	Titre du document : CDC Pink Book – Rubella https://drive.google.com/file/d/11JSySikEL9HODpfuTATaiJQwWXIIwJyK/view?usp=sharing	Auteur/Année : CDC, 2011
	P. 276 : Prevention of CRS is the main objective of rubella vaccination programs in the United States.	
	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 710 : The goal of rubella vaccination programs is the prevention of the intrauterine infection that causes CRS, and, incidentally, the occasional complication of the disease in adults	

210	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 716
211	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 712 : In 1982, Sweden adopted a two-stage vaccination scheme involving the use of MMR at two ages: 18 months and 12 years. [...] Before 1974, a yearly average of 14 CRS cases was recorded in Sweden; there were 2 cases per year between 1975 and 1985, and there have been no cases since 1985.
212	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 712 : The Finns vaccinate with MMR at 14 to 18 months and at 6 years. Since 1986, no case of CRS has been reported. The last indigenous rubella case occurred in 1996. In 1997 and 1998, rubella has thus been eliminated from Finland.
213	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 712 : The policy of vaccinating schoolgirls was adopted by the British in 1970. During subsequent years, the number of reported rubella cases decreased only slightly, although the reported cases of CRS decreased approximately 75%. [...] Since October 1988, rubella vaccine as part of MMR has been recommended to all infants, and in 1994, a large-scale vaccination campaign was conducted with MR combined vaccine. Congenital rubella and terminations of pregnancy for rubella decreased markedly in England and Wales, with only one CRS case reported in 1995.
214	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 711 : The provinces of Canada adopted a policy either of mass vaccination of infants or of selective vaccination of preschool-age girls. Total rubella incidence dropped in the provinces that adopted mass vaccination of infants but was not much changed in those adopting vaccination of preschool-age girls. However, reported CRS decreased throughout Canada. As of 1983, all provinces give vaccine to infants and also to 12 year old girls who have not been immunized previously.
215	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 419 : Although mumps generally is viewed as an acute, relatively benign communicable disease of childhood, it gained notoriety as an illness substantially affecting armies during times of mobilization.

	Les données sur la mortalité due à la rougeole sont à la page 123.	
234	Titre de l'article : Effect of vaccination programmes on mortality burden among children and young adults in the Netherlands during the 20th century: a historical analysis	PMID: 26873665
	Auteur principal/Année : Maarten van Wijhe, 2016	Revue : Lancet Infectious Diseases

	<p>P. 6 :</p> <p>For measles, the contribution to the all-cause mortality burden reduced steadily over the prevaccination period, so once vaccination was introduced in 1976, the mortality burden was already too low to note a clear effect of vaccination.</p>
235	<p>Désignation abrégée :</p> <p>Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 353</p>
236	<p>Désignation abrégée :</p> <p>Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 353 :</p> <p>...subacute sclerosing panencephalitis (SSPE) (1 per 100,000 cases)...</p> <p>Le graphique de la page 374 montre environ 45 cas de PESS aux États-Unis en 1969 (avant même que le niveau de la rougeole n'ait diminué, étant donné le délai entre la rougeole et l'apparition de la PESS).</p>
237	<p>Désignation abrégée :</p> <p>Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 358 :</p> <p>Young age at infection contributes to the high risk of serious complications and death. Also, malnutrition, especially vitamin A deficiency, may be an important factor leading to the marked severity of measles in the developing world because of defects in cellular (and possibly humoral) immunity.</p>
238	<p>Désignation abrégée :</p> <p>Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 365-366</p>
239	<p>Désignation abrégée :</p> <p>Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 369 :</p> <p>With overall incidence of measles in the United States at record low levels and no evidence of increasing incidence among previously vaccinated persons, waning immunity does not appear to constitute a problem. Although secondary vaccine failures have been documented, taken collectively, the serologic and epidemiologic data during the past 35 years indicate that vaccine provides long-term immunity.</p>
240	<p>Désignation abrégée :</p> <p>Plotkin 2013 - Vaccines (6^e édition)</p>
	<p>P. 381 :</p> <p>As vaccination coverage increases among successive birth cohorts, measles transmission decreases, reducing the risk of measles even among unvaccinated persons. At some vaccine-induced immunity level lower than 100%, measles virus transmission is interrupted.</p> <p>[...]</p> <p>Mathematical models have estimated the herd immunity threshold for measles in the United States at 92% to 95%.</p> <p>[...]</p> <p>Experience in industrialized countries has shown that a single dose of measles vaccine, widely administered, can reduce measles transmission, but a two-dose strategy is necessary for elimination of indigenous transmission.</p>

	<p>P. 365 : Measles vaccine provides both personal immunity to prevent disease when exposed to measles virus and population immunity through decreased intensity of transmission as the proportion of immune persons in a population increases. The population immunity effect decreases the risk of measles among immunized as well as unimmunized persons.</p>

241-253

241	Titre de l'article : Correlates of Vaccine-Induced Immunity		PMID: 18558875
	Auteur principal/Année : Stanley A. Plotkin, 2008	Revue : Clinical Infectious Diseases	
	P. 5 : A remark in passing: it has become cliché to say that vaccines prevent only disease, not infection. Although that may be often the case, it is not a general truth. If the presence of antibodies is sufficient to prevent colonization of mucosal surfaces, vaccines can produce “sterile” immunity. Vaccines against polio, measles, rubella, Hib, pneumococcus, meningococcus, and probably human papillomavirus are all capable of preventing infection as well as disease.		

242	Titre de l'article : Control of pertussis—Lessons learnt from a 10-year surveillance programme in Sweden		PMID: 19679218
	Auteur principal/Année : Rose-Marie Carlsson, 2009	Revue : Vaccine	
	P. 5 : Mild-to-moderate cases in semi-immune individuals may have a shorter period of contagiousness, but they contribute to the spread of disease because they often go unrecognised and the infected individuals continue with their daily activities in day-care centres, schools and workplaces.		

243	Désignation abrégée : Carlsson 2009		
	P. 1 : In 1979, whole-cell pertussis (wP) vaccine was withdrawn from the Swedish childhood vaccination programme because of decreasing effectiveness and international concerns about safety.		

244	Désignation abrégée : Carlsson 2009		
	P. 5		
	Titre de l'article : Surveillance of infant pertussis in Sweden 1998–2012; severity of disease in relation to the national vaccination programme		PMID: 25695476
	Auteur principal/Année : Rose-Marie Carlsson, 2015	Revue : Euro surveillance	

	<p>P. 1 :</p> <p>Pertussis decreased in non-vaccinated infants (2003 to 2012, $p < 0.001$), indicating herd immunity, both in those too young to be vaccinated and those older than three months.</p>
--	---

245	<p>Désignation abrégée :</p> <p>Carlsson 2009</p>
	<p>P. 9 :</p> <p>The Swedish enhanced surveillance project is sponsored by the aP vaccine manufacturers GlaxoSmithKline (Rixensart, Belgium), Sanofi Pasteur and Sanofi Pasteur MSD (Lyon, France).</p>
	<p>Désignation abrégée :</p> <p>Carlsson 2015</p>
	<p>P. 8 :</p> <p>Financial support was obtained from the National Institute of Allergy and Infectious Diseases, Contract no. N01-AI-15125, from the European Commission, Contract n° QLK2-CT-2001-01819; Eupertstrain, and from the following manufacturers an unrestricted grant: GlaxoSmithKline Vaccines, Wavre, Belgium, Sanofi Pasteur, Lyon, France, and Sanofi Pasteur MSD, Lyon, France.</p>

246	<p>Désignation abrégée :</p> <p>Carlsson 2009</p>
	<p>P. 1 :</p> <p>There is also a well-established child healthcare system in Sweden, with 98–99% vaccination coverage in infancy. The coverage for the three-dose pertussis vaccination at 3, 5 and 12 months of age rapidly reached this level because the introduction of the diphtheria–tetanus–aP (DTaP) vaccine only involved a switch from DT vaccine to DTaP, and this coverage has remained unchanged during the subsequent switch to multivalent combinations including aP.</p>

247	<p>Désignation abrégée :</p> <p>Carlsson 2015</p>
	<p>P. 3, graphique 2</p>

248	<p>Désignation abrégée :</p> <p>Carlsson 2009</p>
	<p>P. 7 :</p> <p>Of the eight deaths in unvaccinated infants during the 10-year Swedish surveillance project [...] Examination of the Swedish national registry of deaths indicates that there were only three pertussis deaths in infants aged 3–11 months during the 10-year period before introduction of aP vaccination. The relevance of the difference between the two periods is uncertain...</p>

249	<p>Désignation abrégée :</p> <p>Carlsson 2009</p>
	<p>P. 3-4 :</p> <p>The Swedish surveillance project was established as a continuation of an efficacy trial reporting procedure, including passive reporting from laboratories and the use of the same telephone questionnaire. This is in contrast to the active and prospective case finding in a previous efficacy trial, and the difference in reported rates between these two trials clearly indicates an almost 10-fold difference between active and passive case detection. [...]</p>

	It is therefore likely that there has been under-reporting of pertussis cases following the introduction of aP vaccination in Sweden, and the degree of under-reporting within the country may vary.
--	--

250	Désignation abrégée : Carlsson 2009
	P. 8 : While it is well established that wP or aP vaccination significantly reduces the overall disease burden, generalisations about the impact of vaccination on pertussis epidemiology are difficult to make because countries differ in many respects, including vaccination schedule, vaccination coverage, types of vaccines used, surveillance systems employed, crowding, mixing patterns and exposure to infection.

29	Titre de l'article : Poliomyelitis https://jamanetwork.com/journals/jama/article-abstract/296121	
	Auteur principal/Année : Hart E. Van Riper, 1947	Revue : JAMA
	P. 1 : The period of evolution from sporadic to epidemic poliomyelitis corresponds roughly with the institution of widespread measures for improved sanitation. This interesting coincidence has led to the hypothesis that the virus is more widespread in areas where the sporadic disease predominates, making possible frequent exposures of the young infant to virus during the time when he still retains a high titer of passive immunity from his mother. Exposure to the virus under these conditions would surely stimulate further resistance to poliomyelitis and only occasionally result in the production of the frank disease. This theory might explain the infrequent cases of poliomyelitis in young children as they occurred in the early history of the disease in Europe and the United States. But, in regions where epidemics predominate, people are exposed to the virus less frequently and at a later period in life, when they have lost all or most of the passive immunity acquired from the mother. Thus there results a greater chance for the development of frank disease among older age groups rather than an increased resistance.	
30	Titre de l'article : Paralytic consequences of poliomyelitis infection in different parts of the world and in different population groups https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1525657/pdf/amjphnation00428-0010.pdf	
	Auteur principal/Année : Albert B. Sabin, 1951	PMID: 14885514 Revue : American Journal of Public Health
	P. 15 : In general, the poorer the population, its standard of living and sanitation, the more extensively is poliomyelitis virus disseminated among them and the lower is the incidence of paralytic poliomyelitis when virulent strains of virus come their way.	

31	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	<p>P. 31 : Polioviruses probably circulated in an uninterrupted endemic manner for many centuries, infecting new cohorts of susceptible infants continuously, almost all early in life, when maternally derived antibody transferred from mother to newborn still provided some protection.</p> <p>A change from endemic transmission to periodic epidemics was first observed in some temperate-climate countries (eg, Norway, Sweden, and the United States) late in the 19th century and at the beginning of the 20th century... The generally accepted explanation, supported by numerous studies, is that, in a temperate-zone climate with increased economic development and correspondingly improved resources for community sanitation and household hygiene, exposure to polioviruses was postponed to later in life.</p>	
32	Désignation abrégée : Nathanson 2010	PMID: 20978089
	<p>P. 2 : The most probable hypothesis is that outbreaks were associated with an increase in the age at which poliovirus infection was occurring (4). In the pre-epidemic era, enteric infections were so ubiquitous that most infants were infected within 6–12 months, at a time when they had circulating antibodies passively derived from their nursing mothers. Although serum antibodies did not prevent enteric infection, they were sufficient to preclude viremia, thereby avoiding invasion of the central nervous system and paralysis. The result was the acquisition of active immunity under the cover of passive protection. However, with the advent of improved personal hygiene and public sanitation, the transmission of enteric infections was delayed so that some infants were first infected after 12 months of age, when levels of passive antibodies had waned, reducing the barrier against invasion of the central nervous system.</p>

	But in the summer of 1916 it became clear that the epidemic, while striking hardest at the young, affected both rich and poor, long-time residents as well as recent immigrants.	
44	Titre du livre : Dirt and Disease: Polio Before FDR https://www.amazon.com/Dirt-Disease-Medicine-American-Society/dp/0813517869/ref=sr_1_1?s=books&ie=UTF8&qid=1476620110&sr=1-1&keywords=9780813517865	
	Auteur principal/Année : Naomi Rogers, 1992	Maison d'édition : Rutgers University Press
	P. 10 : Poliomyelitis paralyzed infants and children. Their economic or sanitary conditions seemed to make little difference; rich or poor, clean or dirty, no child seemed immune.	
45	Titre de l'article : Notes Of An Epidemic Of Acute Anterior Poliomyelitis https://jamanetwork.com/journals/jama/article-abstract/458738	
	Auteur principal/Année : Charles S. Caverly, 1896	Revue : JAMA
	P. 1 : That the general sanitary surroundings and methods of living were in anywise responsible for the outbreak is also more than doubtful, since the disease showed no partiality to that class of the population whose habits and surroundings are the most unsanitary. The so-called laboring classes were oftenest affected, but not out of proportion to their numbers. These classes here, whether among the farming population or in the mills and quarries, have usually pure air, food and water. Hence, general sanitary conditions did not seem to have any influence on the epidemic.	
46	Titre de l'article : The Occurrence Of Infantile Paralysis In Massachusetts In 1907 https://archive.org/details/b22431779	
	Auteur principal/Année : Robert W. Lovett, 1908	Revue : Boston Medical and Surgical Journal
	P. 6-7 : The reports on the conditions of the house in which the patients lived are of interest. One hundred and fifteen lived in detached houses; 110 in tenements. As to the influence of dampness, 99 lived on the first floor; 65 on the second; 12 on the third; and 6 in the upper stories; 20 occupied the whole house. Sanitary conditions were described as exceptionally good in 21. Good, in 123. Fair, in 55. Poor or bad, in 23... The house was screened in 133 cases, and not screened or insufficiently so in 80... Analyzing these data for what they are worth, it would seem that it was not an affection confined to the lower classes.	

47	Titre de l'article : An Epidemic Of Infantile Paralysis In Western Massachusetts In 1908 https://archive.org/details/bostonmedicalsur1611mass		
	Auteur principal/Année : Herbert C. Emerson, 1909		Revue : Boston Medical and Surgical Journal
	<p>P. 118 : Investigation of the home conditions of each case shows that sanitary conditions were found to be excellent in 4 cases, good in 17, fair in 31 and bad in 17. Forty-one of the cases lived in detached houses, 17 in two-tenement and 3 in three-tenement houses, while but 8 lived in houses having four or more tenements...</p> <p>The sanitary arrangements in the houses showed that 23 houses had water closets connected with the sewer and 46 had earth closets; that the sink water from 30 houses was carried into the sewer and in 39 cases it was disposed of in various ways on the land nearby or in pipes to the nearest brook, pond, etc.</p>

61	Titre de l'article : The Poliomyelitis Story: A Scientific Hegira https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2589894/pdf/yjbm00092-0018.pdf	PMID: 2994307
----	---	------------------

	Auteur principal/Année : Dorothy M. Horstmann, 1985	Revue : The Yale Journal Of Biology And Medicine
	P. 2 : The likely explanation of these patterns is thought to be related to ways of life - to an improved sanitary environment in industrialized countries which protected young children from early exposure to the virus, allowing a build-up in the number of susceptibles among whom epidemics could get under way. In contrast, in the underdeveloped, largely tropical countries of the world where the sanitary environment remains poor, infection and immunity develop in the first few years of life. Thus there are not enough susceptibles for an epidemic to occur, and cases remain confined to the youngest age group.	

62	Titre de l'article : Poisoning as The Cause of Poliomyelitis		PMID: 14771968
	Auteur principal/Année : Ralph R. Scobey, 1950	Revue : Archives of Pediatrics	
	P. 29 One has only to examine critically the literature of the past and it will be found that poliomyelitis beyond doubt existed, but that it was designated by many names. The writer had found individual cases and epidemics of paralytic diseases listed by nearly 200 names prior to 1890.

	Partie II, p. 2 : We were interested in the long list of mistaken diagnoses reported by Brady and Lenarsky but found, on checking our own experiences that we had seen in this and other epidemics fifty seven different conditions suspected of being poliomyelitis.		

67	Titre de l'article : Poliomyelitis-The Los Angeles Epidemic Of 1934 https://www.ncbi.nlm.nih.gov/pmc/articles/PMC1753761/pdf/calwestmed00403-0040.pdf		PMID: 18743375
	Auteur principal/Année : RW Meals, 1950	Revue : California And Western Medicine	
	Partie II, p. 7 : In the Chicago outbreaks of 1916 and 1917, almost every conceivable disease and condition was reported by physicians as poliomyelitis.		
68	Titre de l'article : Poliomyelitis Problems		PMID: 14796117
	Auteur principal/Année : Archibald L. Hoyne, 1951	Revue : Medical clinics of North America	
	P. 7 : In the midst of an epidemic a great variety of diseases and conditions have been confused with poliomyelitis. Among them are some that have been observed by the writer and which will merely be mentioned here. They are: practically all forms of bacterial meningitis but particularly tuberculosis, tetanus, rheumatic fever, mononucleosis, brain abscess, brain tumor, trichinosis, mumps meningoencephalitis, lymphocytic choriomeningitis, transverse myelitis, lead poisoning, Guillain-Barre syndrome, laryngeal diphtheria, scurvy, tonsillitis, postdiphtheritic paralysis, acute pharyngitis, diabetes and hysteria; also osteomyelitis, a foreign body in the plantar surface of the foot causing a limp, appendicitis and fracture of the fibula, skull fracture and spontaneous subarachnoid hemorrhage. P. 5 : It is frequently stated that no two cases of poliomyelitis are exactly alike

76	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 39-40 : An incomplete list of arsenic-tinted items compiled by the Medical Society of London in the early 1880s, for example, enumerated paper, fancy and surface coloured, in sheets for covering cardboard boxes; for labels of all kinds; for advertisement cards, playing cards, wrappers for sweetmeats, cosques, etc.; for the ornamentation of children's toys; for covering-children's and other books; for lamp shades, paperhangings for walls and other purposes; artificial leaves and flowers; wax ornaments for Christmas trees and other purposes; printed or woven fabrics intended for use as garments; printed or woven fabrics intended for use as curtains or coverings for furniture; children's toys, particularly inflated india-rubber balls with dry colour inside, painted india-rubber dolls, stands and rockers of	

	rocking-horses and the like, glass balls (hollow); distemper colour for decorative purposes; oil paint for the same; lithographer's colour printing; decorated tin plates, including painted labels used by butchers and others to advertise the price of provisions; japanned goods generally; Venetian and other blinds; American or leather cloth; printed table baizes; carpets, floorcloth, linoleum, book cloth and fancy bindings. To this list may be added coloured soaps, sweetmeats and false malachite. Arsenic is also used in the preparation of skins for stuffing and of some preservatives used by anatomists." Other lists, though less lengthy, often turned up additional arsenical products. The renowned British toxicologist Robert Christison observed that not only was Scheele's green used to make sweetmeats more appetizing, but that it was also added to preserves and to apple tarts, and that several children had been made ill by the latter. 'Others' pointed out that the green cakes in water color sets generally contained arsenic, as did dental fillings, and that people had been injured by arsenical stockings, veils, cosmetics, concert tickets, fly papers, stuffed animals, even money.

77	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 49-51 : The respect in which Fowler's solution was held can be best appreciated by an enumeration of the conditions for which it was regularly prescribed. These included anemia, headache, dyspepsia, eczema, psoriasis, all other chronic skin diseases, neuralgia, chorea, epilepsy, whooping cough, asthma, bronchitis, emphysema, pulmonary tuberculosis, malaria, and cancer. In addition, Fowler's solution was suggested, at one time or another, for cholera, yellow fever, syphilis, diabetes, angina pectoris, tic douloureux, gout, arthritis, rheumatism, constipation, morning sickness, melancholia, impotence, fits of sneezing, warts, boils, and, for the careless traveler in the Orient, cobra bites.	

78	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 41 : The real leadership of the campaign against arsenical manufactures was assumed by the physicians of Massachusetts, most prominent among these Yankee meddlers being a foursome of Bostonians: Frank Winthrop Draper, medical examiner (coroner) of Boston and lecturer at Harvard Medical School; James Jackson Putnam, professor of neurology at Harvard; Frederick Cheever Shattuck, professor of clinical medicine; and William Barker Hills, the medical school's chemistry professor. With a diligence befitting Harvard men, these four delivered lectures and published papers on the dangers of arsenic in the household, with the express purpose of informing the citizenry, through their physicians, of products to be avoided.

	P. 2 : These results conclusively show: first, that the community is exposed to arsenical contamination on a very large scale.	

81-100

81	Titre du livre : Encyclopedia of Pest Management https://books.google.co.il/books?id=ytFoAcwI4sQC&pg=PA377&lpg=PA377#v=onepage&q&f=false	
	Auteur principal/Année : David Pimentel, 2013	Maison d'édition : CRC Press
	P. 377 : The Colorado potato beetle, provides a prime example. It appeared as a devastating pest of potato in Iowa and Nebraska in 1861, having transferred from a native weed to an introduced relative, the potato. The beetle spread rapidly eastward, reaching the Atlantic coast in 1874, despite the use of traditional nonchemical means of control. In 1867, farmers in the west discovered that the Colorado potato beetle could be controlled with Paris green, an arsenical. Paris green was in general use by 1880 and became the first widely used pesticide in North America.

	Chapitre 14	

83	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 23 : This decline did not leave the field uncontested to Paris green, for shortly before 1900 the most effective arsenical insecticide of all had been discovered, during the campaign against the gypsy moth. A leaf-eating insect native to Europe, the moth was first brought to the New World by Leopold Trouvelot, a French-born Harvard astronomer with a side-interest in silkworm breeding. Some experiments dealing with the latter subject seemed to Trouvelot to require gypsy moths, and so in 1869 he imported a number of gypsy moth eggs and cared for them until the insects reached maturity. The moths wasted little time asserting their independence, and soon escaped from Trouvelot's home in Medford, Massachusetts. Twenty years later, in 1889, their descendants, in the form of caterpillars, returned to Medford, in numbers that "were so enormous that the trees were completely stripped of their leaves, the crawling caterpillars covered the sidewalks, the trunks of the shade trees, the fences and the sides of the houses, entering the houses and getting into the food and into the beds. They	

	<p>were killed in countless numbers by the inhabitants who swept them up into piles, poured kerosene over them and set them on fire. Thousands upon thousands were crushed under the feet of pedestrians, and a pungent and filthy stench arose from their decaying bodies. The numbers were so great that in the still, summer nights the sound of their feeding could plainly be heard, while the pattering of the excremental pellets on the ground sounded like rain.</p>

	P. 4 : Lead poisoning is easily confused with poliomyelitis of the bulbo-spinal type.		

100	Titre de l'article : The History of Lead Arsenate Use in Apple Production: Comparison of its Impact in Virginia with Other States	
	Auteur principal/Année : Michael J. Weaver, 2008	Revue : Journal of Pesticide Safety Education
	P. 11 : In 1919 they discovered that common washing practices did not adequately remove arsenic residues from produce. A study conducted by the Virginia Agricultural Experiment Station (Hough et al., 1931) concluded that three sprays of lead arsenate applied in May and June did not require removal of spray residue at harvest time. However, when a third or fourth spray of lead arsenate was applied in July, followed by dry weather, excessive residues remained on the apples at harvest. Wiping or brushing apples removed only about one-third of the total arsenical residues.	

101-120

101	Titre de l'article : The History of Lead Arsenate Use in Apple Production: Comparison of its Impact in Virginia with Other States	
	Auteur principal/Année : Michael J. Weaver, 2008	Revue : Journal of Pesticide Safety Education
	P. 12 : The search for substitutes for LA began in earnest when it was discovered in 1919 that contemporary practices for washing produce were failing to adequately remove As residues (Shepard, 1939). Unfortunately, all of the tested alternative materials were found to provide less effective insect control or were more toxic to plants and animals. No adequate substitutes were found until 1947, when the synthetic organic insecticide dichlorodiphenyltrichloroethane (DDT) was introduced.

	Auteur principal/Année : Peter Ryan, 2010		Archive : https://drive.google.com/open?id=1_y5C67E8mXGhMMLZS_uwMVSdrz8-brcl
	P. 13 : High arsenic levels were found in small pockets throughout the state (Map 1-1). The most notable collection of high arsenic results were in Rutland and Bennington counties.		
104	Titre de l'article : 'Do Not Eat Those Apples; They've Been On The Ground!': Polio Epidemics And Preventive Measures, Sweden 1880s-1940s		PMID: 19750602
	Auteur principal/Année : Per Axelsson, 2009		Revue : Asclepio. Revista de Historia de la Medicina y de la Ciencia
	P. 8 : Medin considered polio to be an acute infectious disease, affecting the nervous system, that could cause epidemics, but he did not consider it to be contagious.		
105	Titre de l'article : 'Do Not Eat Those Apples; They've Been On The Ground!': Polio Epidemics And Preventive Measures, Sweden 1880s-1940s		PMID: 19750602
	Auteur principal/Année : Per Axelsson, 2009		Revue : Asclepio. Revista de Historia de la Medicina y de la Ciencia
	P. 7 : As late as 1911 some physicians in Sweden still argued that polio was a disease caused by miasma. The theory of miasma implied that disease was not caused by contagions but by putrefaction, i.e. «bad air» and should be combated with cleaner environments which often meant improved hygiene and sanitation.		
106	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)		
	Auteur principal/Année : Ivar Wickman, 1913		Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 112 : Infantile paralysis is of an infectious, but not of a contagious nature. As a matter of fact, no indisputable instance of contagion could be proved.		

107	Titre de l'article : Is Acute Poliomyelitis Unusually Prevalent This Season?	
	Auteur principal/Année : James J. Putnam, 1893	Revue : Boston Medical and Surgical Journal
	P. 2 : To what is the unfavorable influence of the summer due? It may be an affair of weather, as such, though obviously heat, pure and simple, is not the important factor; or the weather may act as favoring some other influence, perhaps bacterial in character. The reasonableness of this latter view is now conceded by many good observers; but it is certain that its advocates are still far from having made good their claim.	
108	Titre de l'article : Is Acute Poliomyelitis Unusually Prevalent This Season?	
	Auteur principal/Année : James J. Putnam, 1893	Revue : Boston Medical and Surgical Journal
	P. 2 : It is noteworthy, as against any strongly marked epidemic influence that the patients did not come to any extent, from any one locality, but from different parts of the large area of the suburbs of Boston.	
109	Titre de l'article : NOTES OF AN EPIDEMIC OF ACUTE ANTERIORPOLIOMYELITIS https://jamanetwork.com/journals/jama/article-abstract/458738	
	Auteur principal/Année : Charles S. Caverly, 1896	Revue : JAMA
	P. 3 : There was a general absence of infectious disease as an etiologic factor in this epidemic. The element of contagion does not enter into the etiology either. I find but a single instance in which more than one member of a family had the disease, and as it usually occurred in families of more than one child, and as no efforts were made at isolation, it is very certain that it was non-contagious.	
110	Titre de l'article : Notes Of An Epidemic Of Acute Anterior Poliomyelitis https://jamanetwork.com/journals/jama/article-abstract/458738	
	Auteur principal/Année : Charles S. Caverly, 1896	Revue : JAMA
	P. 5 : That a disease occasionally prevails epidemically suggests a specific poison, a definite toxin, and this phase of the etiology of poliomyelitis has recently received attention from foreign observers as well as from Dana, Putnam and others in this country. Thus far, however, there does not seem to have been any substantial progress made toward isolating any specific microorganism peculiar to this disease.	
111	Titre de l'article : An Epidemic Of Infantile Paralysis In Western Massachusetts In 1908 https://archive.org/details/bostonmedicalsur1611mass	
	Auteur principal/Année : Herbert C. Emerson, 1909	Revue : Boston Medical and Surgical Journal
	P. 118 : With regards to the contagiousness of the disease, the investigation of this group of cases	

	suggests that the disease is but mildly contagious to say the most. A large number of children were in intimate contact with those that were sick, and of these children an insignificant minority developed the disease... the circumstances were particularly favorable to the investigation of points of contact between sick and well and of the detection of contagion.	
112	Titre de l'article : The Occurrence Of Infantile Paralysis In Massachusetts In 1907 https://archive.org/details/b22431779	
	Auteur principal/Année : Robert W. Lovett, 1908	Revue : Boston Medical and Surgical Journal
	P. 4 : Following up still further the evidence of contagion: Other cases in the family were reported in 11 instances; other cases in the same house in 9 instances; other cases among acquaintances in 20 instances. That is, in 40 cases (17%), there was reason to look into the question of contagion.	
113	Titre de l'article : An Epidemic Of Infantile Paralysis In Western Massachusetts In 1908 https://archive.org/details/bostonmedicals1611mass	
	Auteur principal/Année : Herbert C. Emerson, 1909	Revue : Boston Medical and Surgical Journal
	P. 118 : Although the cause of the disease is not known, it can undoubtedly be classed as infectious, as its distribution and incidence in localities are similar to those of other infectious diseases and strongly suggest a common cause.	
	Titre de l'article : The Occurrence Of Infantile Paralysis In Massachusetts In 1907 https://archive.org/details/b22431779	
	Auteur principal/Année : Robert W. Lovett, 1908	Revue : Boston Medical and Surgical Journal
	P. 2 : That anterior poliomyelitis is an infectious disease is the commonly received opinion. Since it has been seen that this cannot be regarded as established by bacterial evidence so far collected, the other evidence in favor of this view will next be investigated....	
114	Titre de l'article : The Occurrence Of Infantile Paralysis In Massachusetts In 1907 https://archive.org/details/b22431779	
	Auteur principal/Année : Robert W. Lovett, 1908	Revue : Boston Medical and Surgical Journal
	P. 4 : This evidence tends rather toward supporting the contagious character of the disease, as established by its uneven distribution, extending from foci and not evenly scattered through the state; by its extension from Pittsfield along the lines of most frequent travel, and by the fact that there was rarely a case in one town without the occurrence of a case in the adjacent town or towns.	

115	Titre de l'article : The Epidemiology Of Acute Poliomyelitis		
	Auteur principal/Année : L. Emmet Holt, 1908		Revue : American Journal of Medical Sciences
	P. 652 : In all we have collected a total of 40 instances, comprising 96 cases, in which more than 1 case occurred in a family or household.		

116	Titre de l'article : The Epidemiology Of Acute Poliomyelitis		
	Auteur principal/Année : L. Emmet Holt, 1908		Revue : American Journal of Medical Sciences
	P. 662 : The occurrence of epidemics and the relation of certain groups of cases to one another in these epidemics place beyond question the statement that acute poliomyelitis is an infectious disease.		

117	Titre de l'article : The Epidemiology Of Acute Poliomyelitis		
	Auteur principal/Année : L. Emmet Holt, 1908		Revue : American Journal of Medical Sciences
	P. 662 : Whether we can go farther and state that the disease is communicable is an open question. After carefully considering all the evidence brought together in this paper, we cannot resist the conclusion that the disease is communicable, although only to a very slight degree.

	Chapitre 8		

124	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)	
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 123	

125	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)	
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 116 : It is not absolutely necessary for direct contact of patient with patient to occur. Indeed, the disease seems more often to be propagated through the mediation of the healthy. As in many other epidemic maladies, spread occurs in Heine-Medin's disease by transmission from person to person.	

126	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)		
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition :	

		The Journal of Nervous and Mental Disease Publishing Company
	P. 116 et suivantes	

127	Ici, par exemple :	
	Nom de la page : Polio Hall of Fame	
	Site Internet : Wikipedia https://en.wikipedia.org/wiki/Polio_Hall_of_Fame	Archive : http://archive.is/nAps3
	Ivar Wickman - Discovered the epidemic character of polio (1907) and coined the term Heine-Medin disease.	
	Titre de l'article : The Poliomyelitis Story: A Scientific Hegira https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2589894/pdf/yjbm00092-0018.pdf	PMID: 2994307
	Auteur principal/Année : Dorothy M. Horstmann, 1985	Revue : The Yale Journal Of Biology And Medicine
	P. 2 : Wickman's meticulous investigations led him to conclude that the mild cases were as contagious as the paralytic ones and were responsible for wide dissemination of the agent. This was a tremendously important discovery made...	

128	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)	
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 125-126 : Acute poliomyelitis must therefore, be included among the contagious diseases. The lateness of the recognition of this fact is due partly to the smallness of former epidemics and partly to two factors which nullified all earlier investigations of epidemic conditions; viz., first, abortive types were not considered, and, second, the possibility of infection through healthy virus carriers was not realized.	

129	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)	
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 126-127	

130	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)	
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 125 : The intimate association of the disease with the principal highways was clearly demonstrable. The relation to main roads and railways was especially striking in districts in which the cases were scattered, either singly or in small groups. A study of the local	

	conditions showed that dissemination must be due to the busy traffic which permitted more frequent communication between the people.	
131	Titre du livre : Polio: from Emergence to Eradication	
	Auteur principal/Année : Matthew Smallman-Reynor, 2006	Maison d'édition : Oxford University Press
	P. 95 : The geographical distribution of poliomyelitis activity in the epidemic of 1905 is mapped in Figure 4.5... A striking feature of the epidemic pattern is the particular involvement of the southern counties of the country (map B), with the principal areas of poliomyelitis activity limited to six scattered, and geographically restricted, epidemic foci (map A)... As a rule, the infected localities were of a distinctly rural nature, with the epidemic demonstrating a marked aversion for the larger urban centers of Stockholm (ten cases). Goteborg (zero cases) and Malmo (zero cases).	
132	Titre du livre : Introduction to Epidemiology (7 ^e édition)	
	Auteur principal/Année : Ray M. Merrill, 2017	Maison d'édition : Jones and Bartlett Learning
	P. 475 : It is known that polio seems to occur in rural areas as much as, if not more than, in large cities, and Scandinavia was quite rural at the time. Less exposure to a disease led to the population's having less immunity to the disease. There seemed to be higher immunity in city dwellers and lower immunity in rural populations.	
133	Titre de l'article : The Epidemiology Of Poliomyelitis With Reference To Its Mode Of Spread	
	Auteur principal/Année : W. Lloyd Aycock, 1926	Revue : JAMA
	P. 1-2 : ...with concentration of population and, as has been assumed, greater person to person contact, there is a widespread distribution of the virus, resulting not in greater incidence than in rural sections, as is true of the common contact diseases, but in a widespread immunization.	
134	Titre de l'article : The Epidemiology Of Poliomyelitis With Reference To Its Mode Of Spread	
	Auteur principal/Année : W. Lloyd Aycock, 1926	Revue : JAMA
	P. 2 : In view of the fact that there is no theoretical reason why persons in rural life should be more prone to exhibit the paralytic form of the disease, it would seem perhaps more reasonable to believe that the immunization in concentrated populations may be due to subinfective doses rather than to a mild attack of the disease.	

135	Titre de l'article : The Epidemiology Of Poliomyelitis With Reference To Its Mode Of Spread		
	Auteur principal/Année : W. Lloyd Aycock, 1926		Revue : JAMA
	P. 1 : The proportion of cases ascribed to direct contact, made up largely of multiple cases in families, has been stated at around 5 per cent. It has been observed that the onsets of multiple cases in families as a rule so nearly coincide that they probably represent in the majority of instances simultaneous infection. When allowance is made for this, the proportion of direct contact cases is reduced to an extremely small figure.		
136	Titre de l'article : The Epidemiology Of Poliomyelitis With Reference To Its Mode Of Spread		
	Auteur principal/Année : W. Lloyd Aycock, 1926		Revue : JAMA
	P. 4-5		
137	Titre de l'article : Poliomyelitis Problems		PMID: 14796117
	Auteur principal/Année : Archibald L. Hoyne, 1951		Revue : Medical clinics of North America
	P. 13 : There is little to indicate that isolation has been a controlling influence in the spread of the disease during epidemics... Since the virus may be found in the intestinal tract for thirty-five days or possibly longer after onset of the disease it would seem logical to disinfect all body discharges before their disposal. However, in the Cook County Contagious Disease Hospital where the latter procedure has not been used there has never been a doctor, intern, nurse or any other member of the personnel who contracted poliomyelitis within a period of at least thirty-five years, nor has any patient ever developed poliomyelitis after admission to the hospital.		
138	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)		
	Auteur principal/Année : Ivar Wickman, 1913		Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 121 : This center contained 18 cases; ten of these were abortive and presented pronounced general symptoms... Only for six children, occupying four houses, could no contact with the other 52 who attended school be traced.		
139	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)		
	Auteur principal/Année : Ivar Wickman, 1913		Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 120 : It was impossible to find, how the disease penetrated the island.		

140	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)	
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 129-130	

141-160

141	Titre du livre : Infantile Paralysis In Vermont https://archive.org/details/infantileparalys00cave	
	Auteur principal/Année : Charles S. Caverly, 1925	Maison d'édition : Burlington, Vermont State Department Of Public Health
<p>Se référant à l'épidémie de polio dans le Vermont en 1912, p. 88 : This once more emphasizes the rather slight contagiousness of the disease</p> <p>Se référant à l'épidémie de polio dans le Vermont en 1916-17, p. 150 : While, therefore, contact infection seems to be increasingly traceable, it must still be considered a disease of rather low contagiousness.</p> <p>Et p. 167 : These figures corroborate the statement made before that while the disease is a communicable disease, it is one of low contagiousness.</p> <p>Et ce, même s'il est bien conscient de la théorie de Wickman. Voir p. 158 : Infantile Paralysis is generally recognized as a contagious disease and one that may be spread innocently by persons who have no clinical symptoms, in other words, by "abortive cases" or "healthy carriers."</p>		

142	Titre de l'article : The Epidemiology Of Poliomyelitis With Reference To Its Mode Of Spread	
	Auteur principal/Année : W. Lloyd Aycock, 1926	Revue : JAMA
<p>P. 4 : ...transmission in such instances is not usually through direct contact between the individuals, nor through the intervention of missed cases or healthy carriers, but through some indirect means. This is illustrated by a recent outbreak, the epidemiologic evidence of which pointed to milk as the means of transmission.</p>		

143	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)	
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
<p>P. 126 : All the patients were supplied with milk by the farmer. The houses were separated from one another by one to two kilometers; and in five cases the illness began on the same day. Under these circumstances it seems to me extremely probable that the milk conveyed the infection.</p>		

144	Titre de l'article : Milestones in Early Poliomyelitis Research (1840 to 1949)		PMID: 10233910
	Auteur principal/Année : Hans J. Eggers, 1999	Revue : Journal Of Virology	
	P. 1		

145	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)		
	P. 573 : Fortunately, in 1908 Karl Landsteiner and Eric Popper isolated the virus of poliomyelitis, and scientific study of the agent began.		

146	Titre de l'article : Milestones in Early Poliomyelitis Research (1840 to 1949)		PMID: 10233910
	Auteur principal/Année : Hans J. Eggers, 1999	Revue : Journal Of Virology	
	P. 1		

147	Par exemple : Titre de l'article : The Transmission Of Acute Poliomyelitis To Monkeys		
	Auteur principal/Année : Simon Flexner, 1909	Revue : JAMA	

148	Titre du livre : Polio: An American Story		
	Auteur principal/Année : David M. Oshinsky, 2006	Maison d'édition : Oxford University Press	
	P. 17 : In the long run, monkeys would prove invaluable to the polio story. More than 100,000 would be sacrificed in the fifty-year quest for a vaccine.		

149	Ici, par exemple : Nom de la page : Polio Hall of Fame		
	Site Internet : Wikipedia https://en.wikipedia.org/wiki/Polio_Hall_of_Fame		Archive : http://archive.is/nAps3

150	Titre de l'article : The Occurrence Of Infantile Paralysis In Massachusetts In 1907 https://archive.org/details/b22431779		
	Auteur principal/Année : Robert W. Lovett, 1908	Revue : Boston Medical and Surgical Journal	
	P. 3		

151	Par exemple :	
	Titre de l'article : Epidemic Poliomyelitis In Monkeys	
	Auteur principal/Année : Simon Flexner, 1910	Revue : JAMA
	P. 2 : Brief mention should be made of other species of animals that have been employed for inoculation. Besides many rabbits and guinea-pigs, 1 horse, 2 calves, 3 goats, 3 pigs, 3 sheep, 6 rats, 6 mice, 6 dogs and 4 cats have had active virus introduced into the brain, but without causing any appreciable effect whatever. These animals have been under observation many weeks.	
152	Par exemple :	
	Titre de l'article : Does the Spinal Fluid from Human Poliomyelitis Contain the Specific Infective Agent?	
	Auteur principal/Année : HL Abramson, 1917	Revue : JAMA
153	Nom de la page : Polio - Diagnostic Methods	
	Site Internet : CDC website https://www.cdc.gov/polio/us/lab-testing/diagnostic.html	Archive : http://archive.is/hDbJu
	Virus isolation in culture is the most sensitive method to diagnose poliovirus infection. Poliovirus is most likely to be isolated from stool specimens. It may also be isolated from pharyngeal swabs. Isolation is less likely from blood or CSF.	
154	Titre de l'article : Poliomyelitis	
	Auteur principal/Année : John A. Toomey, 1941	Revue : Journal of Pediatrics
	P. 1 : There has been a vast amount of research in poliomyelitis Most of the experiments have been done on M. rhesus monkeys, animals not susceptible to this disease.	
155	Titre du livre : Preventive Medicine and Hygiene https://drive.google.com/open?id=1ONdI0AG5blbj8mJM0vMupllqgVoL0T4D	
	Auteur principal/Année : Milton J. Rosenau, 1918	Maison d'édition : D Appleton and Company
	P. 341 : Monkeys have so far never been known to contract the disease spontaneously, even though they are kept in intimate association with infected monkeys.	

156	Titre de l'article : Poliomyelitis	
	Auteur principal/Année : John A. Toomey, 1941	Revue : Journal of Pediatrics
	P. 5 : The natural disease never acts like an upper respiratory infection in the experimental animal for no animal gets the disease from another, no matter how intimately exposed.	

157	Titre de l'article : Poliomyelitic Virus In Urban Sewage https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2135110/pdf/765.pdf		PMID: 19870997
	Auteur principal/Année : John R. Paul, 1940	Revue : Journal of Experimental Medicine	
	P. 13 : In two out of three large urban epidemics of poliomyelitis the virus of this disease has been detected in samples of sewage. From one of the sites it was found repeatedly. Both positive sites were located in the vicinity of isolation hospitals, and we believe that the findings indicate that this virus can be transported, for short distances at least, through the medium of flowing sewage.		

158	Titre de l'article : Sewage as a carrier and disseminator of Poliomyelitis Virus	
	Auteur principal/Année : C. Kling, 1942	Revue : Acta Medica Scandinavica

159	Titre de l'article : Sewage as a carrier and disseminator of Poliomyelitis Virus	
	Auteur principal/Année : C. Kling, 1942	Revue : Acta Medica Scandinavica
	P. 15	

160	Titre de l'article : Sewage as a carrier and disseminator of Poliomyelitis Virus	
	Auteur principal/Année : C. Kling, 1942	Revue : Acta Medica Scandinavica
	P. 5 : From these experiments it is apparent that we have succeeded in isolating the virus of poliomyelitis in a sample of sewage collected in Stockholm in the course of a minor epidemic of infantile paralysis.	

161-180

161	Titre de l'article : Sewage as a carrier and disseminator of Poliomyelitis Virus	
	Auteur principal/Année : C. Kling, 1942	Revue : Acta Medica Scandinavica

	<p>P. 32 :</p> <p>...we know also the vehicle where the infectious agent, while the epidemic is going on and for some time after its end, dwells, i. e. the sewage.</p>	
162	<p>Titre de l'article : Poliomyelitic Virus In Human Stools https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2135104/pdf/751.pdf</p>

	<p>Auteur principal/Année : Dorothy M. Horstmann, 1944</p>	<p>Revue : JAMA</p>
164	<p>Titre de l'article : Flies As Carriers Of Poliomyelitis Virus In Urban Epidemics</p>	
	<p>Auteur principal/Année : Albert A. Sabin, 1941</p>	<p>Revue : Science</p>
165	<p>Titre de l'article : Insects And Epidemiology Of Poliomyelitis</p>	
	<p>Auteur principal/Année : Albert A. Sabin, 1942</p>	<p>Revue : Science</p>
	<p>P. 1 :</p> <p>The distinctly positive results which we obtained with collections of insects consisting only of flies, leaves no doubt that they are carriers of the virus.</p>	
166	<p>Titre de l'article : Insects And Epidemiology Of Poliomyelitis</p>	
	<p>Auteur principal/Année : Albert A. Sabin, 1942</p>	<p>Revue : Science</p>
	<p>P. 1 :</p> <p>It should be noted that we were unable to obtain positive results with Rhesus monkeys, and because Cynomolgi are needed, these studies will probably have to be postponed until importation from Java is again possible.</p>	
167	<p>Titre de l'article : The Detection Of Poliomyelitis Virus In Flies Collected During Epidemics Of Poliomyelitis https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2135360/pdf/531.pdf</p>	
	<p>Auteur principal/Année : James D. Trask, 1943</p>	<p>Revue : Journal of Experimental Medicine</p>
168	<p>Titre de l'article : Poliomyelitis Virus In Fly-Contaminated Food Collected At An Epidemic</p>	
	<p>Auteur principal/Année : Robert Ward, 1945</p>	<p>Revue : Science</p>

169	Titre de l'article : Poliomyelitis Virus In Fly-Contaminated Food Collected At An Epidemic		PMID: 17735530
	Auteur principal/Année : Robert Ward, 1945	Revue : Science	
	P. 3 : Poliomyelitis virus has been detected in food exposed to flies at homes of poliomyelitis patients within an epidemic area.		

170	Titre de l'article : Poliomyelitis		
	Auteur principal/Année : John A. Toomey, 1941	Revue : Journal of Pediatrics	
	P. 25 : Most of the experiments described during this period have been made in animals given the disease by injecting virus intranasally, intratheally, intrasciatically, or by some other artificial avenue of approach. If the virus enters the human being by way of the gastrointestinal tract, practically all except the broader conclusions, especially those that have to do with pathogenesis and the explanation of symptoms, have to be discarded in toto.		

171	Titre de l'article : Poisoning as The Cause of Poliomyelitis		PMID: 14771968
	Auteur principal/Année : Ralph R. Scobey, 1950	Revue : Archives of Pediatrics	
	Partie II, p. 5 : The views as to the portal of entry and communicability rest fundamentally and entirely on findings from experiments on monkeys. To some of us it does not appear to square with the facts obtained by epidemiological studies of the disease among human beings. It seems to elastic, too restful. On epidemiological grounds alone, it appears conceivable that poliomyelitis is not caused by a living microorganism or a virus, but by a toxin.		

172	Titre de l'article : A Study Of The Origin Of An Epidemic Of Poliomyelitis		
	Auteur principal/Année : Martha L. Smith, 1945	Revue : JAMA	
	P. 6 : Yet, in spite of the comparative ease with which poliomyelitis may be experimentally transferred to monkeys from these reservoirs, it has not been established that the virus in such form gives rise to the human disease. The possibility undoubtedly exists, but direct proof is still lacking.		

173	Titre de l'article : The Polioviruses Of Man		
	Auteur principal/Année : Stanley A. Plotkin, 1962	Revue : Annals of New York Academy of Sciences	
	P. 13, tableau 10		

	Nom de la page : Pink Book - Polio		
--	---------------------------------------	--	--

	Site Internet : CDC https://www.cdc.gov/vaccines/pubs/pinkbook/polio.html	Archive : http://archive.is/yvRRU
	Humans are the only known reservoir of poliovirus, which is transmitted most frequently by persons with inapparent infections.	
174	Titre de l'article : Notes Of An Epidemic Of Acute Anterior Poliomyelitis https://jamanetwork.com/journals/jama/article-abstract/458738	
	Auteur principal/Année : Charles S. Caverly, 1896	Revue : JAMA
	P. 4 : During this epidemic and in the same geographical area, an acute nervous disease, paralytic in its nature, affected domestic animals. Horses, dogs and fowls died with these symptoms.	
175	Titre de l'article : Notes Of An Epidemic Of Acute Anterior Poliomyelitis https://jamanetwork.com/journals/jama/article-abstract/458738	
	Auteur principal/Année : Charles S. Caverly, 1896	Revue : JAMA
	P. 4 : ...says that the examination of a section of the lumbar portion of, the cord showed a granular degeneration and pigmentation of the ganglion cells of the anterior cornua, and atrophy of the anterior nerve roots." He further states that there was no meningitis in this case. Dr. Charles L. Dana, who made the examination of the fowl, with the aid of Dr. Dunham, of the Carnegie Laboratory, found "an acute poliomyelitis of the lumbar portion of the cord and no meningitis."	
176	Titre de l'article : Notes Of An Epidemic Of Acute Anterior Poliomyelitis https://jamanetwork.com/journals/jama/article-abstract/458738	
	Auteur principal/Année : Charles S. Caverly, 1896	Revue : JAMA
	P. 5 : That domestic animals suffered with human beings in our epidemic is a noteworthy fact and one, so far as I can learn, hitherto unobserved. That such was the case can not be doubted.	
177	Titre du livre : Infantile Paralysis In Vermont https://archive.org/details/infantileparalys00cave	
	Auteur principal/Année : Charles S. Caverly, 1925	Maison d'édition : Burlington, Vermont State Department Of Public Health
	P. 51-53	
178	Titre du livre : Infantile Paralysis In Vermont https://archive.org/details/infantileparalys00cave	

	Auteur principal/Année : Charles S. Caverly, 1925	Maison d'édition : Burlington, Vermont State Department Of Public Health
	P. 110	

179	Titre du livre : Infantile Paralysis In Vermont https://archive.org/details/infantileparalys00cave	
	Auteur principal/Année : Charles S. Caverly, 1925	Maison d'édition : Burlington, Vermont State Department Of Public Health
	P. 110 : Instances of paralysis among domestic animals have always been noted as accompanying our outbreaks of human infantile paralysis.	

180	Titre de l'article : The Occurrence Of Infantile Paralysis In Massachusetts In 1908	
	Auteur principal/Année : Robert W. Lovett, 1909	Revue : Boston Medical and Surgical Journal
	P. 1 : The attention of the State Board of Massachusetts has been called to the occurrence of infantile paralysis in a mother and daughter shortly after an epidemic of "leg weakness" in the chickens of the household, and the matter is under investigation.	

181-200

181	Titre de l'article : The Occurrence Of Infantile Paralysis In Massachusetts In 1910	
	Auteur principal/Année : Robert W. Lovett, 1911	Revue : Boston Medical and Surgical Journal
	P. 4 : Total, 34 homes out of 110 had illness, paralysis or death in 82 animals near the time of the human paralysis.	

182	Titre du livre : A Manual On Infantile Paralysis With Modern Methods Of Treatment	
	Auteur principal/Année : Henry W. Frauenthal , 1914	Maison d'édition : FA Davis Company
	P. 8	

183	Titre du livre : A Manual On Infantile Paralysis With Modern Methods Of Treatment	
	Auteur principal/Année : Henry W. Frauenthal , 1914	Maison d'édition : FA Davis Company
	P. 10 : During the epidemic of 1000 cases in Minnesota in 1909 three colts were seen by Dr. H. W. Hill, epidemiologist of the Minnesota State Board of Health, ill with a disease "strongly analogous in clinical history and symptoms to the disease in the human."	
184	Titre du livre : A Manual On Infantile Paralysis With Modern Methods Of Treatment	
	Auteur principal/Année : Henry W. Frauenthal , 1914	Maison d'édition : FA Davis Company
	P. 10 : In my veterinary practice of the past five or six years I have found a disease appearing among one- or two- year-old colts that shows a line of symptoms corresponding closely to anterior poliomyelitis in children. I have had from 5 to 10 cases a year during this time, always occurring during the summer months, and the majority of them during the month of August. The affected colts are usually found in the pasture unable to stand.	
185	Titre du livre : A Manual On Infantile Paralysis With Modern Methods Of Treatment	
	Auteur principal/Année : Henry W. Frauenthal , 1914	Maison d'édition : FA Davis Company
	P. 11 : The State of California had an epidemic of 100 known cases of poliomyelitis in 1910. The majority of these cases occurred in San Joaquin County, and according to the September, 1910, Bulletin of the California State Board of Health, "veterinarians report a considerable number of puzzling paralyzes of colts in San Joaquin County, where the largest number of cases have occurred so far."	
186	Titre du livre : A Manual On Infantile Paralysis With Modern Methods Of Treatment	
	Auteur principal/Année : Henry W. Frauenthal , 1914	Maison d'édition : FA Davis Company
	P. 12-13 : Dr. A. R. Robertson, pathologist at Drake University Medical School, reported: "Examination of fowl paralyzed after three days' acute illness (one wing, both legs). Upon exposure of the spinal cord, a distinct area of softened cord, one inch in length, of the lower dorsal and upper lumbar regions was observed. Histological sections from the affected areas revealed numerous small hemorrhages in the anterior cornua and distinct collections of cells in perivascular and perilymph channels, and tissue spaces of the anterior horns. The histological picture was that of acute poliomyelitis in man."	
187	Titre de l'article : The Occurrence Of Infantile Paralysis In Massachusetts In 1908	
	Auteur principal/Année : Robert W. Lovett, 1909	Revue : Boston Medical and Surgical Journal
	P. 1 : It was noted by Wickman that in the Swedish epidemic of 1903 dogs were apparently affected in many instances with the children, but he was not convinced of the identity of the two affections.	

188	Titre du livre : Acute Poliomyelitis (Heine-Medin's Disease)	
	Auteur principal/Année : Ivar Wickman, 1913	Maison d'édition : The Journal of Nervous and Mental Disease Publishing Company
	P. 132 : Caverley, Wickman. Peiper, and others have mentioned the appearance of paralysis in animals and in fowl coincident with epidemics among human beings. But the futile inoculation of these creatures shows their affliction has nothing in common with that in man.	
189	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
190	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 48 : The farmer would be laughed at who undertook to manure his fields or his trees with a salt of lead or arsenic.	
191	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 69 (citation de 1913) : ...a prominent federal entomologist could admit... that "there exists, in this country, no regulation in force and no precaution is taken toward preventing accidents resulting from the use of arsenicals".	
192	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 72-78	
193	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 71 : The head of the Agriculture Department's Bureau of Entomology, C. V. Riley himself, was called upon to assure readers "how utterly groundless are any fears of injury" from sprayed produce.	

194	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 84 : The Royal Commission Appointed to Inquire into Arsenical Poisoning from the Consumption of Beer and other Articles of Food and Drink was chaired by the most venerable figure in British science, the physicist Baron Kelvin, and staffed by several of the most prominent medical specialists in the nation.	
195	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 86 : "Pending the establishment of official standards in respect of arsenic under the Sale of Food and Drugs Acts," the commissioners decided, the evidence we have received fully justifies us in pronouncing certain quantities of arsenic in beer and in other foods as liable to be deleterious, and at the same time capable of exclusion, with comparative ease, by the careful manufacturer. In our view it would be entirely proper that penalties should be imposed under the Sale of Food and Drugs Acts upon any vendor of beer or any other liquid food, if that liquid is shown by an adequate test to contain 1/100th of a grain or more of arsenic in the gallon; and with regard to solid food-no matter whether it is habitually consumed in large or in small quantities, or whether it is taken by itself . . . or mixed with water or other substances . . .-if the substance is shown by an adequate test to contain 1/100th grain of arsenic or more in the pound."	
196	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 86 : The Commission's recommendation, furthermore, was informally adapted by the British government and the limit of 0.01 grain per pound or gallon soon came to be referred to as the "world tolerance" for arsenic as other nations recognized the importance and validity of the Royal Commission's work.	
197	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 266, note 49 : In Germany, too, there was opposition to the use of arsenicals. The chemist von der Heide found in 1906 that grapes from German vines sprayed with lead arsenate contained as much as 0.2 mg. of arsenic per 100 g. (about 0.014 grain of arsenic per pound, or 40 percent above the "world tolerance."). This discovery prompted the German Imperial Health Commission to oppose the use of lead arsenate and, in fact, the compound was eventually prohibited (temporarily) from agricultural application in Germany. Other arsenical insecticides were apparently permitted, but only under close supervision, as was generally the case in other European countries.

202	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 71 Riley's sentiments had originally been expressed in an 1891 address to Boston's Lowell Institute and were at least questionable then. In later years, however, their frequent repetition would become dangerously misleading, for shortly after Riley's speech the average residues of arsenic on fruit and vegetables began to steadily increase. This increase was due, in part, to the growing numbers of farmers using arsenical insecticides.	

203	Titre du livre : Before Silent Spring: Pesticides and Public Health in Pre-DDT America	
	Auteur principal/Année : James Whorton, 1974	Maison d'édition : Princeton University Press
	P. 69 : More than two decades later, a prominent federal entomologist could admit... to a foreign inquirer that, "there exist, in this country, no regulation in force and no precaution is taken toward preventing accidents resulting from the use of arsenicals."	
204	Titre du livre : DDT – Scientists, Citizens and Public Policy https://www.amazon.com/DDT-Scientists-Citizens-Princeton-Library/dp/0691613907	
	Auteur principal/Année : Thomas Dunlap, 1981	Maison d'édition : Princeton Legacy Library
	P. 42 : When insecticide residues became a problem in the 1920s, one agency of the department, the Bureau of Plant Industry, was recommending spraying schedules to kill insect pests; another agency, the Bureau of Chemistry (replaced by the Food and Drug Administration in 1927), was seizing produce, sometimes sprayed in strict accordance with the schedules, on the grounds that it was contaminated with poisonous chemicals. The Secretary of Agriculture had to satisfy the requirements and needs of public health without alienating the main political support of the department, the farmers.

	P. 3	
254	Titre de l'article : TOXIC EFFECTS OF 2,2-bis (p-CHLORPHENY) 1,1,1-TRICHLORETHANE (D.D.T.) IN MAN	
	Auteur principal/Année : R. A. M. Case, 1945	Revue : BMJ
	P. 1-2 : ...it is likely that a substance known to be toxic to mammals, shown to be toxic to man under certain conditions, and in wide use may produce subclinical manifestations, not at present recognized, which will lower the health-level and efficiency of workers at risk, and that the rapidly growing use of D.D.T. will extend into circumstances where human intoxication is likely to occur.	
255	Titre de l'article : TOXIC EFFECTS OF 2,2-bis (p-CHLORPHENY) 1,1,1-TRICHLORETHANE (D.D.T.) IN MAN	
	Auteur principal/Année : R. A. M. Case, 1945	Revue : BMJ
	P. 4 : It should be stressed that these experiments only show D.D.T. distemper to be toxic under special conditions, possibly rather more severe than would obtain in practice, and do not form the basis for any condemnation of the widespread use of D.D.T. if proper precautions are taken, particularly in the avoidance of oil contamination. They do, however, emphasize that D.D.T. intoxication in human beings is a hazard to be considered and guarded against.	

256	Titre de l'article : Present Position of DDT in the Control of Insects of Medical Importance	
	Auteur principal/Année : Fred C. Bishopp, 1946	Revue : American Journal of Public Health

257	Titre de l'article : Present Position of DDT in the Control of Insects of Medical Importance	
	Auteur principal/Année : Fred C. Bishopp, 1946	Revue : American Journal of Public Health
	P. 2 : DDT is a nerve poison, as indicated by the early appearance of muscular tremors and other symptoms.	

258	Titre de l'article : Present Position of DDT in the Control of Insects of Medical Importance	
	Auteur principal/Année : Fred C. Bishopp, 1946	Revue : American Journal of Public Health
	P. 2 : DDT must not be allowed to get into foods or to be ingested accidentally.	

259	Titre de l'article : Present Position of DDT in the Control of Insects of Medical Importance	
	Auteur principal/Année : Fred C. Bishopp, 1946	Revue : American Journal of Public Health
	P. 2 : One of the outstanding characteristics of DDT is its persistence. In fact, this is perhaps the major element in making it superior to many other insecticides. This persistence, however, makes it necessary to use care when applying it on crops or products intended for food or feed.	

260	Titre du document : Pharmacologic And Toxicologic Aspects Of DDT	
	Auteur principal/Année : AMA Council On Pharmacy And Chemistry, 1951	Archive : https://drive.google.com/open?id=1nOgsZmnp2lZuTWbEBB4jW1eiPccKlvfb
	P. 2 : DDT must be applied cautiously to food crops, which require treatment after the development of the edible portion of the plant, if residues at the time of harvest are to be avoided... It should not be used on dairy cattle or animals being prepared for slaughter since there is a danger of accumulation of the substance in the milk and tissues of treated animals.	

261-280

261	Titre du document : Pharmacologic And Toxicologic Aspects Of DDT	
	Auteur principal/Année :	Archive :

	AMA Council On Pharmacy And Chemistry, 1951	https://drive.google.com/open?id=1nOgsZmnp2lZuTWbEBB4jW1eiPccKlvfb
	<p>P. 2 :</p> <p>DDT is a "cerebrospinal" poison which acts primarily on the central nervous system in man and higher animals as contrasted with its apparent peripheral action in insects. The principal systemic effects in higher animals are disturbances of the central nervous system characterized by hyperexcitability, generalized tremors, spastic or flaccid paralysis and convulsions.</p>	

262	Titre du document : Pharmacologic And Toxicologic Aspects Of DDT	
	Auteur principal/Année : AMA Council On Pharmacy And Chemistry, 1951	Archive : https://drive.google.com/open?id=1nOgsZmnp2lZuTWbEBB4jW1eiPccKlvfb
	<p>P. 3 :</p> <p>Chronic poisoning may result from prolonged ingestion or exposure to small amounts of DDT... As in acute poisoning, there are wide individual variations in susceptibility regardless of the route of administration; this makes it difficult to establish safe tolerance levels applicable to all individuals</p>	

263	Titre de l'article : Present Position of DDT in the Control of Insects of Medical Importance	
	Auteur principal/Année : Fred C. Bishopp, 1946	Revue : American Journal of Public Health
	<p>P. 1-2 :</p> <p>From the work of these pharmacologists the following very general conclusions can be drawn: 10. When used as recommended for the control of human parasites and household insects, DDT insecticides are not harmful to human health.</p>	
	Titre de l'article : THE TOXICITY OF 29,2-bis (P-CHLORPHENYL) 1,,1-TRICHLORETHANE (D.D.T.)	
	Auteur principal/Année : G. R. Cameron, 1945	Revue : BMJ
	<p>P. 6 :</p> <p>D.D.T. is tolerated in fairly large amounts when administered as single or repeated doses. Toxic levels are not easily reached when dilute solutions suitable for insecticidal purposes are employed. Danger to health is likely to arise only from careless use of concentrates.</p>	

264	Titre de l'article : Present Position of DDT in the Control of Insects of Medical Importance	
	Auteur principal/Année : Fred C. Bishopp, 1946	Revue : American Journal of Public Health
	<p>P. 5 :</p> <p>The question of safety in labeling and handling DDT is dealt with in a release of the Food and Drug Administration of November 5, 1945. The position is taken that the degree of toxicity of DDT does not place it with the caustic poisons and hence -labeling it "poison" with skull and crossbones is not necessary.</p>	

265	Titre du livre : DDT – Scientists, Citizens and Public Policy https://www.amazon.com/DDT-Scientists-Citizens-Princeton-Library/dp/0691613907		
	Auteur principal/Année : Thomas Dunlap, 1981		Maison d'édition : Princeton Legacy Library
	<p>P. 59 : The official debate over regulatory policy for DDT was, however, conditioned by a factor unique in the history of insecticide regulation: DDT was first used during World War II; by the time it entered the civilian market it already had a reputation for effectiveness, power, and safety unmatched by any other material.</p> <p>P. 63 : As soon as production exceeded military requirements the War Production Board allowed the surplus to be used for experiments; it released DDT for general civilian use on 1 August 1945.</p>		

266	Titre de l'article : Statement on Clinical Intoxication From DDT and Other New Insecticides		PMID: 14832501
	Auteur principal/Année : Morton S. Biskind, 1950	Revue : Journal of Insurance Medicine	
	<p>Partie 1, p. 1 : Since shortly after the last war, a large number of cases had been observed by physicians all over the country... The condition was of unknown origin... [and] was widely attributed to a "virus X". As with all other physicians, a large number of my patients had this condition. I, like others, found it extremely puzzling; it resembled no infectious process I was acquainted with...</p>

	Auteur principal/Année : Morton S. Biskind, 1949		Revue : American Journal of Digestive Diseases
	P. 3-4		

272	Titre de l'article : DDT Poisonins and the Elusive "Virus X:" A New Cause for Gastro-Enteritis		
	Auteur principal/Année : Morton S. Biskind, 1949		Revue : American Journal of Digestive Diseases
	P. 4 : To anyone with even a rudimentary knowledge of toxicology, it exceeds all limits of credibility that a compound lethal for insects, fish, birds, chickens, rats, guinea pigs, rabbits, dogs, cats, goats, sheep, horses, cattle and monkeys would be nontoxic for human beings.		

273	Titre de l'article : Public Health Aspects Of The New Insecticides		
	Auteur principal/Année : Morton S. Biskind, 1953		Revue : American Journal of Digestive Diseases
	P. 2 : Since the last war there have been a number of curious changes in the incidence of certain ailments and the development of new syndromes never before observed. A most significant feature of this situation is that both man and all his domestic animals have simultaneously been affected.		

274	Titre de l'article : Public Health Aspects Of The New Insecticides		
	Auteur principal/Année : Morton S. Biskind, 1953		Revue : American Journal of Digestive Diseases
	P. 2 : ...these conditions is mentioned in the comprehensive U. S. Department of Agriculture Handbook, "Keeping Livestock Healthy," published in 1942. This coincidence alone should have been sufficient to rouse a suspicion that something new that is common both to man and his domestic animals, has been operating in their environment during the period these changes have occurred.		

275	Titre de l'article : Public Health Aspects Of The New Insecticides	
	Auteur principal/Année : Morton S. Biskind, 1953	Revue : American Journal of Digestive Diseases
	P. 4 : ...studies by Lillie and his collaborators (74, 75) of the National Institutes of Health, published in 1944 and 1947 respectively, which showed that DDT may produce degeneration of the anterior horn cells of the spinal cord in animals. These changes do not occur regularly in exposed animals any more than they do in human beings, but they do appear often enough to be significant.	
276	Titre de l'article : DDT Poisonins and the Elusive "Virus X:" A New Cause for Gastro-Enteritis	
	Auteur principal/Année : Morton S. Biskind, 1949	Revue : American Journal of Digestive Diseases
	P. 5 : A Siamese cat dusted with DDT developed convulsions in a few hours and died some days later with paralysis of the hind limbs.	
277	Titre de l'article : Public Health Aspects Of The New Insecticides	
	Auteur principal/Année : Morton S. Biskind, 1953	Revue : American Journal of Digestive Diseases
	P. 4 : When the population is exposed to a chemical agent known to produce in animals lesions in the spinal cord resembling those in human polio, and thereafter the latter disease increases sharply in incidence and maintains its epidemic character year after year, is it unreasonable to suspect an etiologic relationship?	
278	Titre de l'article : Public Health Aspects Of The New Insecticides	
	Auteur principal/Année : Morton S. Biskind, 1953	Revue : American Journal of Digestive Diseases
	P. 4 : In the Philippines and elsewhere in the Far East American troops, who used vast quantities of DDT as insecticides, had a high incidence of poliomyelitis, while it was extremely low in the surrounding native population.	
279	Titre de l'article : Present Concepts And Recent Advances In Acute Poliomyelitis	
	Auteur principal/Année : John R. Paul, 1952	Revue : AMA Archive of Internal Medicine
	P. 8 : It is not known whether the disease may be spread by agents other than infected persons, as, for instance, by insects or contaminated food or water. Theoretically these agents might be "eliminated" by the introduction of "improved sanitary measures." One recognizes that food or flies or cockroaches could on occasion be infectious, but no evidence exists that such insects are an essential link in the chain, comparable with mosquitoes when they carry the parasite of malaria or the virus of yellow fever.	

280	Titre du livre : DDT – Scientists, Citizens and Public Policy https://www.amazon.com/DDT-Scientists-Citizens-Princeton-Library/dp/0691613907	
	Auteur principal/Année : Thomas Dunlap, 1981	Maison d'édition : Princeton Legacy Library
	P. 65 : In desperation, some towns even sprayed DDT in an effort to combat polio.	

281-300

281	Titre de l'article : The Epidemiology of Poliomyelitis in Africa	
	Auteur principal/Année : James Gear, 1958	Archive : https://drive.google.com/open?id=1F-IcUN-b22YEghe-3I4Pldwk4vwDA3xe
	P. 5 : The systemic spraying of villages and towns with DDT, BHC and similar long-acting insecticides has not hastened the end of an epidemic, nor indeed has it prevented the onset of an epidemic.	

282	Titre de l'article : Statement on Clinical Intoxication From DDT and Other New Insecticides		PMID: 14832501
	Auteur principal/Année : Morton S. Biskind, 1950	Revue : Journal of Insurance Medicine	
	Partie 2, p. 2 : Wherever DDT had been used extensively against polio, not only was there an epidemic of the syndrome I have described but the incidence of polio continued to rise and in fact appeared where it had not been before.		

283	Titre de l'article : Statement on Clinical Intoxication From DDT and Other New Insecticides		PMID: 14832501
	Auteur principal/Année : Morton S. Biskind, 1950	Revue : Journal of Insurance Medicine	
	Partie 2, p. 2 : This is not surprising since it is known that not only can DDT poisoning produce a condition that may easily be mistaken for polio in an epidemic but also being a nerve poison itself, may damage cells in the spinal cord and thus increase the susceptibility to the virus.		

284	Titre de l'article : Public Health Aspects Of The New Insecticides	
	Auteur principal/Année : Morton S. Biskind, 1953	Revue : American Journal of Digestive Diseases
	P. 1 : Soon after the introduction of DDT for widespread use as a household, public health and agricultural insecticide, it became evident that virtually all forms of insects were propagating strains completely resistant to this compound. This led to a frantic search for more and more potent insecticides (which also turned out to be more and more toxic for	

	animals and man). One after another new compounds were introduced, the total list being very <i>long</i> indeed.

	Auteur principal/Année : Dorothy M. Horstmann, 1963	Revue : Yale Journal of Biology and Medicine	
	P. 4 : As with so many contact infections, the exact manner in which polioviruses are transmitted from one person to another is imperfectly understood.		

301-320

301	Titre de l'article : Transmission Of Poliomyelitis Virus		PMID: 14889394
	Auteur principal/Année : Albert B. Sabin, 1951	Revue : Journal of Pediatrics	
	P. 5 : If the introduction of the virus into the mouth by means of the hands or other materials is of basic importance in the transmission of poliomyelitis, can we regard the period of communicability as being for only a few days before and a few days to a week after onset of symptoms, when, by our present methods, the virus is still readily demonstrable in the stools of approximately 50 per cent of individuals during the third and fourth weeks? How much reliance should we place on the epidemiological observations which place the "infectious period" at four to five days before and after onset of symptoms, when it is realized that these conclusions are based on tracing extrafamilial secondary cases to presumably single contacts with patients who became sick and had to go to bed?		

302	<p>Titre de l'article :</p> <p>Epidemiology Of Poliomyelitis And Allied Diseases--1963</p> <p>https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2604573/pdf/yjbm00599-0011.pdf</p>		<p>PMID:</p> <p>14064722</p>

	Titre de l'article : An Outbreak Of Poliomyelitis In Israel In 1961 And The Use Of Attenuated Type 1 Vaccine In Its Control	
	Auteur principal/Année : Jacob Yofe, 1962	Revue : American Journal of Epidemiology
	P. 6 : During the third week of May, type 1 attenuated vaccine prepared from Sabin's LSc, 2 ab strain was obtained through the courtesy of Wyeth Laboratories. It was decided to feed vaccine to all children born from January 1, 1957, down to 4 days of age.	
	Aux États-Unis :	
	Titre du livre : Jonas Salk: A Life https://www.amazon.com/Jonas-Salk-Charlotte-DeCroes-Jacobs/dp/0199334412/	
	Auteur principal/Année : Charlotte DeCroes Jacobs, 2015	Maison d'édition : Oxford University Press
	P. 226 : Among those few who sided with Salk in opposition to the oral vaccine was the director of the Communicable Disease Center, Alex Langmuir. The number of polio cases had fallen to 2 percent of that prior to the field trial. He saw no reason to revaccinate those who had received the Salk vaccine. O'Connor agreed and held a press conference at which he vehemently opposed revaccination and leveled his guns at the surgeon general. Saying Terry was "flying in the face of facts and for reasons that might not best be questioned," O'Connor accused him of "withholding from the public the true picture of the need...to promote the preferential sale of the second vaccine to do what's already been done by one....Half-truths and nonscientific innuendos and implications" had no place where the health of the public was concerned. He sent a letter to the editor of Washington Star, decrying the advice to revaccinate those already protected with the killed vaccine. "There is no sane or scientific basis." Yet widespread oral vaccination continued.

	Auteur principal/Année : William McD. Hammon, 1958	Revue : JAMA	
	P. 6 : In other words, there may exist strains of enteroviruses which, with opportune conditions, act like polioviruses in man and produce an occasional paralytic illness that clinically cannot be differentiated from paralytic poliomyelitis.		

349	Titre de l'article : A Study Of Certain Nonpoliomyelitis And Poliomyelitis Enterovirus Infections		PMID: 13538759
	Auteur principal/Année : William McD. Hammon, 1958	Revue : JAMA	
	P. 7 : These paralytic and nonparalytic illnesses cannot be expected to be prevented by the present poliomyelitis vaccine and may be considered vaccine failures unless the exact etiology is established.		

350	Titre de l'article : Epidemiology Of Poliomyelitis And Allied Diseases--1963 https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2604573/pdf/yjbm00599-0011.pdf		PMID: 14064722
			Archive : https://drive.google.com/open?id=1fV_w03BSORQKex-hR7DkGZH44EXUwpTv
	Auteur principal/Année : Dorothy M. Horstmann, 1963	Revue : Yale Journal of Biology and Medicine	
P. 9 : The inactivated vaccine, since its introduction in 1955, has greatly reduced the incidence of paralytic poliomyelitis in countries in which its use has been extensive. This has been accomplished by inducing serologic immunity in vaccinees, which prevents CNS invasion. However the extent to which the inactivated vaccine has suppressed the circulation of wild polioviruses and the incidence of inapparent intestinal infection is not well documented... This is not surprising, for although the vaccine induces antibody formation, it does not provide a significant barrier to intestinal infection with either wild or vaccine strains.			

351	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)		
	P. 631 : Continued use of OPV will induce effective intestinal immunity, thereby enhancing community resistance to transmission of imported wild poliovirus.		

352	Titre de l'article : Epidemiology Of Poliomyelitis And Allied Diseases--1963 https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2604573/pdf/yjbm00599-0011.pdf		PMID: 14064722

	Auteur principal/Année : Dorothy M. Horstmann, 1963	Revue : Yale Journal of Biology and Medicine	

	<p>P. 9 :</p> <p>In contrast, inapparent infection, either natural or oral vaccine induced, does result in a marked degree of resistance to intestinal multiplication of virus, although in neither case is this resistance absolute.</p>
--	---

353	Titre de l'article : The Influence Of Natural And Artificially Induced Immunity On Alimentary Infections With Polioviruses		PMID: 13571484
	Auteur principal/Année : John P. Fox, 1958	Revue : American Journal of Public Health	
	P. 9 : At that time, no evidence could be found that primary vaccination had influenced either the occurrence or course of alimentary infections in any way, whereas it was already clear that immunity resulting from natural infection did exert a significantly limiting effect.		

354	Titre de l'article : The Influence Of Natural And Artificially Induced Immunity On Alimentary Infections With Polioviruses		PMID: 13571484
	Auteur principal/Année : John P. Fox, 1958	Revue : American Journal of Public Health	
	P. 11 : Infected but vaccinated children appeared to be just as effective sources for intrahousehold spread of virus as did unvaccinated children.		

355	Titre de l'article : The Influence Of Natural And Artificially Induced Immunity On Alimentary Infections With Polioviruses		PMID: 13571484
	Auteur principal/Année : John P. Fox, 1958	Revue : American Journal of Public Health	
	P. 9 : Among children without natural immunity there was little variation in the duration of excretion in relation to vaccination... Rather surprisingly, however, tests for the amount of virus present in the first virus-positive specimen revealed nearly as much virus (4.2 mean long infectivity) in stools from children with prior natural immunity as in those, whether vaccinated or not, without natural immunity (4.0 to 4.9 mean log infectivity).		

356	Titre de l'article : The Influence Of Natural And Artificially Induced Immunity On Alimentary Infections With Polioviruses		PMID: 13571484
	Auteur principal/Année : John P. Fox, 1958	Revue : American Journal of Public Health	
	P. 11 : ...it is concluded that widespread use of Salk vaccine should not by any reasonable mechanism influence poliovirus dissemination.		

357	Titre de l'article : Influence Of Vaccination With Formalin Inactivated Vaccine Upon Gastrointestinal Infection With Polioviruses		PMID: 14415906
	Auteur principal/Année : Martha Lipson Lepow, 1960	Revue : American Journal of Public Health	
	P. 9 : The results of this study would indicate that the prior administration of one or two doses of inactivated poliomyelitis vaccine does not reduce the susceptibility of the lower		

	gastrointestinal tract of man to poliovirus infection. These results are in accord with those of Fox, Davis, Koprowski, and Sabin... Vaccination cannot be expected to decrease significantly the number of persons in the community suffering from inapparent poliovirus infections. Therefore, the opportunities of becoming infected will be the same as before vaccine was used, although paralytic disease can be expected to be less frequent.
--	--

358	Titre de l'article : Influence Of Vaccination With Formalin Inactivated Vaccine Upon Gastrointestinal Infection With Polioviruses		PMID: 14415906
	Auteur principal/Année : Martha Lipson Lepow, 1960	Revue : American Journal of Public Health	
	P. 10 : The observations of Koprowski and Sabin with avirulent viruses, and Fox with natural infection provide more direct evidence concerning this question. They indicate that antibody, either acquired passively from the mother or resulting from vaccination with killed vaccine, has no effect upon the susceptibility of the bowel.		

359	Titre de l'article : Influence Of Vaccination With Formalin Inactivated Vaccine Upon Gastrointestinal Infection With Polioviruses		PMID: 14415906
	Auteur principal/Année : Martha Lipson Lepow, 1960	Revue : American Journal of Public Health	
	P. 11 : It is concluded that immunization with killed poliomyelitis vaccines cannot be expected to decrease the numbers of persons in the community with alimentary poliovirus infection. Thus, vaccination, while of value to the persons immunized, is unlikely to provide protection to those not vaccinated.		

360	Titre du document : Polio - The Beginning Of The End	
	Auteur/Année : WHO, 1997	Archive : https://drive.google.com/open?id=1r0R4dlSUiB6jOtNta-FvrKDD-gFlzW9h
	P. 20 : Inactivated polio vaccine (IPV) works by producing protective antibodies in the blood—thus preventing the spread of poliovirus to the central nervous system. However, it induces only very low-level immunity to poliovirus inside the gut. As a result, it provides individual protection against polio paralysis but only marginally reduces the spread of wild poliovirus. In a person immunized with IPV, wild virus can still multiply inside the intestines and be shed in stools. Because of this, IPV could not be used to eradicate polio.	

361-380

361	Titre de l'article : Exit Poliomyelitis-What Next?	
	Auteur principal/Année : Sven Gard, 1961	Revue : Yale Journal Of Biology And Medicine
	P. 8 : In any event, Salk was inclined to regard the reduced attack rates as an effect of the vaccination, reasoning as follows. If oropharyngeal secretions are more important for transmission of virus in communities where contact with sewage or feces is less likely, and if vaccination has little or no effect upon fecal virus but does have a significant effect upon	

	pharyngeal virus, then it is conceivable that spread of virus may be diminished by effective vaccination...

	Auteur principal/Année : Sven Gard, 1961	Revue : Yale Journal Of Biology And Medicine
	P. 8 : The evidence supporting the first if seems at best equivocal and as regards the second if, evidence was at the time entirely lacking.	

363	Titre de l'article : Exit Poliomyelitis-What Next?	
	Auteur principal/Année : Sven Gard, 1961	Revue : Yale Journal Of Biology And Medicine
	P. 8 : The New Orleans group in their studies on the spread of virus found no evidence to support the theory that oropharyngeal secretions are more important than fecal excretion where the spread of the virus is concerned. In fact, some of their observations spoke decidedly in favor of the assumption of predominantly fecal spread. Our own observations on the decisive importance of the age of the excreter point in the same direction.	
	Titre de l'article : The Influence Of Natural And Artificially Induced Immunity On Alimentary Infections With Polioviruses	
	Auteur principal/Année : John P. Fox, 1958	PMID: 13571484 Revue : American Journal of Public Health
	P. 10 : This has led to renewed consideration of the possibility that pharyngeal virus is more important than fecal virus and that vaccination may influence upper alimentary or pharyngeal infection even though it has no effect on the process at a lower level. The available data do not seem to support this idea.	

364	Titre du livre : Vaccines (6 ^e édition) Publié par Elsevier Saunders https://www.elsevier.com/books/vaccines/plotkin/978-1-4557-0090-5
-----	--

365	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 586 : Thus, in epidemiological settings where the primary mode of interhuman transmission in affected communities is oral to oral (vs. fecal to oral), IPV can effectively terminate transmission.

366	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)
	P. 588 : The evidence for herd immunity comes from countries where oral-to-oral transmission was probably the dominant mode of interhuman poliovirus transmission. It is less clear if IPV is able to induce herd immunity in countries where the fecal-to-oral route is thought to be the primary role in transmission.

367	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 587

	Auteur principal/Année : Jane S. Smith, 1990	Maison d'édition : William Morrow & Co
	P. 368 : The laboratory of Biologics Control... was reorganized in the wake of the tragic problems with polio vaccine. On July 15, 1955 it was named Bureau of Biologics, with the promise of a greatly expanded staff and newly enlarged facilities for vaccine testing... By 1956 over one hundred people worked in the polio division, testing vaccines.	

381-400

381	Titre du livre : Patenting The Sun: Polio and the Salk Vaccine https://www.amazon.com/Patenting-Sun-Polio-Salk-Vaccine/dp/0688094945	
	Auteur principal/Année : Jane S. Smith, 1990	Maison d'édition : William Morrow & Co
	P. 369 : For the epidemiologists of the Communicable Disease Center, the Cutter incident was the crisis that made their reputation... One of Surgeon General Scheele's first acts after the early reports of problems with Cutter vaccine was to establish a program of national surveillance, with all states reporting cases of poliomyelitis directly to the CDC in Atlanta.	

382	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1311 : Through the Polio Vaccination Assistance Act, Congress appropriated funds in 1955 and 1956 to the Communicable Disease Center (now the CDC) to help states and local communities buy and administer vaccine.	
383	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)	
	P. 1311 : When the grant program began in 1963, the only vaccines available were diphtheria and tetanus toxoids and whole-cell pertussis (DTP), polio, and smallpox. Since that time, funding has been expanded to cover vaccines routinely recommended for children.	
384	Titre de l'article : Safety Testing of Poliomyelitis Vaccine	
	PMID: 13432758	
	Auteur principal/Année : Paul Meier, 1957	Revue : Science
P. 4 : Many of the technical reports and publications which have appeared both before and after the Cutter incident have been vague about those facts which might open the status of the program to criticism. For example, the public statement proceeding the field trial did not mention the finding of live virus... Perhaps the most disturbing element of the entire program has been the disparity between the risks that were known to be involved and the repeated assurances of safety.		
385	Titre de l'article : Safety Testing of Poliomyelitis Vaccine	
	PMID: 13432758	
	Auteur principal/Année : Paul Meier, 1957	Revue : Science
P. 4 : To the query, "what is the estimated calculated risk of inducing poliomyelitis infection by the inoculation of vaccine under present safety standards?" the foundation reply is "None, No risk".		
386	Titre de l'article : The Present Status of Polio Vaccines	
	Archive : https://drive.google.com/open?id=13MEzjIrvzvuzbltwTqBhGiOm8nZln2I4	
	Auteur principal/Année : Herbert Ratner, 1960	Revue : Illinois Medical Journal
P. 9 : How is it that today you hear from the members of this panel that the Salk vaccine situation is confused; yet, what everybody knows from reading the newspapers, and has been known since the vaccine was introduced, is that the situation as far as the Salk vaccine is concerned was and is marvelous? ...the best way to push forward a new program is to decide on what you think the best decision is and not question it thereafter, and further, not to raise questions before the public or expose the public to open discussion of the issue.		

387	Titre du livre : The Cutter Incident: How America's First Polio Vaccine Led to the Growing Vaccine Crisis https://www.amazon.com/Cutter-Incident-Americas-Vaccine-Growing/dp/0300126050	
	Auteur principal/Année : Paul A. Offit, 2005	Maison d'édition : Yale University Press
	P. 101-102	
388	Titre du livre : The Cutter Incident: How America's First Polio Vaccine Led to the Growing Vaccine Crisis https://www.amazon.com/Cutter-Incident-Americas-Vaccine-Growing/dp/0300126050	
	Auteur principal/Année : Paul A. Offit, 2005	Maison d'édition : Yale University Press
	P. 102 : Quietly and with little attention from the public or the media, Wyeth recalled one lot of its vaccine.	
389	Titre du livre : The Cutter Incident: How America's First Polio Vaccine Led to the Growing Vaccine Crisis https://www.amazon.com/Cutter-Incident-Americas-Vaccine-Growing/dp/0300126050	
	Auteur principal/Année : Paul A. Offit, 2005	Maison d'édition : Yale University Press
	P. 102 : <i>The Wyeth Problem</i> [report] was sent to the director of the Communicable Diseases Center, the director of the National Institutes of Health, the Surgeon General of the United States, and the director of the Laboratory of Biologics Control. It was never released to the media, never shown to polio researchers, never shown to the National Foundation, never shown to polio vaccine advisers, never distributed to health care professionals, never published in medical journals, and never made available to defense attorneys in subsequent lawsuits against Cutter Laboratories. As a result, only a handful of people knew about the problem with Wyeth's vaccine.	
390	Titre du livre : The Cutter Incident: How America's First Polio Vaccine Led to the Growing Vaccine Crisis https://www.amazon.com/Cutter-Incident-Americas-Vaccine-Growing/dp/0300126050	
	Auteur principal/Année : Paul A. Offit, 2005	Maison d'édition : Yale University Press
	P. 103 : Nathanson surmised that the government never publicly disclosed the Wyeth problem because it wanted to maintain the public's trust in the polio vaccine program. If people thought that the problem was limited to one company's incompetence, the solution was simply to eliminate that company's vaccine. But if the problem was industrywide, people would be afraid to use any polio vaccine. "As long as the problem was with one manufacturer and a couple of lots of vaccine," Nathanson recalled, "it would be viewed as an aberration due to sloppy manufacturing or testing procedures and not an intrinsic problem. Once it was extended to a second manufacturer, it would be seen as intrinsic to the product."

	Auteur principal/Année : AMA Council On Pharmacy And Chemistry, 1952	Archive : https://drive.google.com/open?id=1Um6gNAsFgcM-TDf5Po7IAT0c6BSKtwK7
	P. 1-2 : This atmospheric level of lindane coupled with its comparatively greater freedom from long-term toxic effects may have partially influenced the change from DDT which has occurred in the use of the automatic, thermostatically controlled type of insecticide generators. The principal reason behind this change, however, was the increasing incidence of insect resistance which is being encountered with the use of DDT. Resistance factors may have also contributed to selection of lindane as the impregnate in insecticide fumigating strips which in continental Europe are being proposed for home and commercial use.

	Auteur principal/Année : World Bank, 2002		
	P. 46 : Overall, WHO food-sampling data indicated that DDT and its derivatives (DDE and DDD) have the highest levels in the food supply directly in countries where DDT is still in use or only recently has been banned; they continue to be found in the food chain in countries where DDT use has been prohibited for many years. Substantial quantities of DDT and its metabolites are found in human blood, fat tissue, and breast milk in surveys around the world.

	Auteur principal/Année : Catharina Wesseling, 1997	Revue : International Journal of Health Service	
	P. 4 : According to the review of the WHOLJNEP Working Group, developing countries consume only between 20 and 25 percent of the world pesticide production. However, the review noted that the fastest growing markets are located in developing regions such as Africa, South and Central America, Asia, and the Eastern Mediterranean Region and that pesticide use in developing countries would double between 1983 and 1993.

	Auteur principal/Année : Arthur Marx, 2000	Revue : Epidemiologic Reviews	
	P. 11 : Exposure (often agricultural or industrial) to chemicals such as lead, arsenic... may cause peripheral motor neuropathy... Arsenic-containing compounds such as melarsoprol are still being used in developing countries for the treatment of African trypanosomiasis (sleeping sickness) and may cause Guillain-Barre syndrome-like AFP.		

422	Titre de l'article : Agricultural Pesticide Use In Developing Countries: Health Effects And Research Needs		PMID: 9142603
	Auteur principal/Année : Catharina Wesseling, 1997	Revue : International Journal of Health Service	
	P. 1 : Over 60 percent of the economically active population in the Third World depends on agriculture. Agricultural workers are exposed to many risk factors such as biological, physical, and chemical agents, and trauma, but the use of toxic pesticides is likely to be one of the most relevant occupational hazards for agricultural workers in the Third World.

	Auteur principal/Année : Harry F. Hull, 1994	Revue : Lancet

	<p>P. 14 : In 1992, the officially reported figure was 15,406 cases (figure 3) an 8% increase from the 14,199 reported the previous year but a 52% fall from the 32,419 reported in 1988.</p>	
	<p>Pour sa défense, l'Organisation mondiale de la santé a affirmé que le nombre de cas signalés était bien inférieur à son taux réel.</p> <p>Titre de l'article : Polio Eradication Initiative In India: Deconstructing The GPEI</p>	<p>PMID: 15932011</p>
	<p>Auteur principal/Année : C. Sathyamala, 2005</p>	<p>Revue : International Journal of Health Services</p>
	<p>P. 18 : In 1988, when the WHO launched the global eradication program, the total number of paralytic poliomyelitis cases reported worldwide was 32,419. However, the WHO increased the figure 10-fold to justify the claim that paralytic poliomyelitis was a major problem of public health importance. Thus, post facto, the number of polio cases worldwide artificially rose from about 35,000 to 350,000 for 1988. The WHO's argument was that the reported cases were an underestimate and that they were at least ten times more.</p>

438	Titre de l'article : Polyneuropathy Following Exposure To Insecticides		PMID: 14120595
	Auteur principal/Année : R. B. Jenkins, 1964	Revue : Archives Of Internal Medicine	
	P. 1 : A cause-and-effect relation between exposure to insecticides and subsequent development of polyneuropathy is very difficult to prove even when strongly suspected... Our two patients... might have been considered to be suffering from a sporadic form of the Guillain-Barre' syndrome of cryptogenic origin had not the close association between exposure to insecticide and neurologic manifestations made an etiologic relationship probable.		

439	Désignation abrégée : Plotkin 2013 - Vaccines (6 ^e édition)		
	P. 601 : Because AFP has many causes, including Guillain-Barre syndrome, transverse myelitis, and infection with nonpolio enteroviruses (see “Differential diagnosis”), laboratory confirmation is critical to establishing the diagnosis of poliomyelitis. The basic approach is to attempt to isolate poliovirus from the stools of patients with AFP and to characterize any poliovirus isolates to determine whether they are vaccine-related or wild.		

	Titre de l'article : Paralytic poliomyelitis: seasoned strategies, disappearing disease		PMID: 7910329
	Auteur principal/Année : Harry F. Hull, 1994	Revue : Lancet	
	P. 1 : A syndrome identical to polio is caused by other enteroviruses, notably enterovirus 71, and some atypical cases may be difficult to differentiate clinically from Guillain-Barre syndrome. A definitive diagnosis requires laboratory confirmation, and virus isolation from stools is the most reliable test.
